-

Item 7.01 Regulation FD Disclosure

On October 4, 2011, the Registrant issued a press release updating the exploration activities on the Bear Lodge Rare Earth project and the Sundance Gold Project, both located near Sundance, Wyoming. Recent discoveries of rare earth mineralization in new areas peripheral to and west of the Bull Hill deposit show some overlap with areas of known gold mineralization. A fourth core drill rig has been added to accelerate exploration in the outlying areas. Currently three core rigs are conducting dedicated REE exploration and resource definition, while the fourth core rig will conduct gold, REE, and geotechnical drilling. A reverse circulation (RC) drill rig continues to drill gold targets, and may be transferred to the REE exploration program to collect bulk samples for metallurgical testing. Exploration work at the project site is expected to continue through November 2011.

A copy of the press release is attached to this report as Exhibit 99.1.

In accordance with General Instruction B.2 of Form 8-K, the information set forth herein and in the press release is deemed to be furnished and shall not be deemed to be filed for purposes of the Securities Exchange Act of 1934, as amended. The information set forth in Item 7.01 of this report shall not be deemed an admission as to the materiality of any information in this report on Form 8-K that is required to be disclosed solely to satisfy the requirements of Regulation FD.
