UNITED STATES  
SECURITIES AND EXCHANGE COMMISSION  
Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2013

Commission File Number: 001-35236

Orchid Island Capital, Inc.

(Exact name of registrant as specified in its charter)

Maryland  
(State or other jurisdiction of  
incorporation or organization)

27-3269228  
(I.R.S. Employer  
Identification No.)

3305 Flamingo Drive, Vero Beach, Florida 32963  
(Address of principal executive offices) (Zip Code)

(772) 231-1400  
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common Stock, \$0.01 par value	NYSE MKT

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.  
Yes  No

Edgar Filing: Orchid Island Capital, Inc. - Form 10-K

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes  No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes  No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes  No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer  Accelerated filer  Non-accelerated filer   
 Smaller Reporting Company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes  No

As of June 30, 2013 the aggregate market value of the common stock held by nonaffiliates was \$26,535,271

Number of shares outstanding at February 21, 2014: 5,411,665

DOCUMENTS INCORPORATED BY REFERENCE:

Portions of the Registrant's definitive Proxy Statement, to be issued in connection with the 2014 Annual Meeting of Stockholders of the Registrant, are incorporated by reference into Part III of this Annual Report on Form 10-K.

## SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

We make forward-looking statements in this annual report that are subject to risks and uncertainties. These forward-looking statements include information about possible or assumed future results of our business, financial condition, liquidity, results of operations, plans and objectives. When we use the words “believe,” “expect,” “anticipate,” “estimate,” “intend,” “should,” “may,” “plans,” “projects,” “will,” or similar expressions, or the negative of these words, we identify forward-looking statements. Statements regarding the following subjects are forward-looking by their nature:

- our business and investment strategy;
  - our expected operating results;
- our ability to acquire investments on attractive terms;
- the effect of the U.S. Federal Reserve’s and the U.S. Treasury’s recent actions on the liquidity of the capital markets;
- the federal conservatorship of Fannie Mae and Freddie Mac and related efforts, along with any changes in laws and regulations affecting the relationship between Fannie Mae and Freddie Mac and the U.S. Government;
  - mortgage loan modification programs and future legislative action;
  - our ability to access the capital markets;
  - our ability to obtain future financing arrangements;
- our ability to successfully hedge the interest rate risk and prepayment risk associated with our portfolio;
  - our ability to make distributions to our stockholders in the future;
  - our understanding of our competition and our ability to compete effectively;
- our ability to qualify and maintain our qualification as a real estate investment trust (“REIT”) for U.S. federal income tax purposes;
  - our ability to maintain our exemption from registration under the Investment Company Act;
    - our ability to maintain the listing of our common stock on the NYSE MKT;
      - market trends;
      - changes in interest rates;
      - changes in the yield curve;
      - changes in prepayment rates;
    - changes in market value of our assets;
  - changes in business conditions and the general economy;
    - expected capital expenditures; and
  - the impact of technology on our operations and business.

The forward-looking statements are based on our beliefs, assumptions and expectations of our future performance, taking into account all information currently available to us. You should not place undue reliance on these forward-looking statements. These beliefs, assumptions and expectations can change as a result of many possible events or factors, not all of which are known to us. Some of these factors are described under the caption “Risk Factors” in this Annual Report on Form 10-K and any subsequent Quarterly Reports on Form 10-Q. If a change occurs, our business, financial condition, liquidity and results of operations may vary materially from those expressed in our forward-looking statements. Any forward-looking statement speaks only as of the date on which it is made. New risks and uncertainties arise from time to time, and it is impossible for us to predict those events or how they may affect us. Except as required by law, we are not obligated to, and do not intend to, update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

## PART I

### ITEM 1. BUSINESS

#### Our Company

Orchid Island Capital, Inc., a Maryland corporation (“Orchid,” the “Company,” “we” or “us”), is a specialty finance company that invests in residential mortgage-backed securities (“RMBS”). The principal and interest payments of these RMBS are guaranteed by the Federal National Mortgage Association (“Fannie Mae”), the Federal Home Loan Mortgage Corporation, (“Freddie Mac”) or the Government National Mortgage Association (“Ginnie Mae”) and are backed primarily by single-family residential mortgage loans. We refer to these types of RMBS as Agency RMBS. Our investment strategy focuses on, and our portfolio consists of, two categories of Agency RMBS: (i) traditional pass-through Agency RMBS and (ii) structured Agency RMBS, such as collateralized mortgage obligations (“CMOs”), interest only securities (“IOs”), inverse interest only securities (“IIOs”) and principal only (“POs”), among other types of structured Agency RMBS. Our website is located at <http://www.orchidislandcapital.com>. Information on our website is not part of this Annual Report on Form 10-K.

We were formed by Bimini Capital Management, Inc. (sometimes referred to herein as “Bimini”) in August 2010, commenced operations on November 24, 2010 and completed our initial public offering on February 20, 2013. Bimini is currently our largest stockholder. On February 14, 2013, we listed our common stock on the NYSE MKT and trade under the symbol “ORC.”

Bimini managed our portfolio from our inception through the completion of our initial public offering on February 20, 2013. Upon completion of the offering, we became externally managed by Bimini Advisors, LLC (“Bimini Advisors,” or the “Manager”). Our Manager is an investment advisor registered with the Securities and Exchange Commission (“SEC”). Additionally, our Manager is a wholly-owned subsidiary of Bimini, which has a long track record of managing investments in Agency RMBS.

We are organized and conduct our operations to qualify, and will elect to be taxed, as a real estate investment trust, or “REIT”, for federal income tax purposes commencing with our short taxable year ended December 31, 2013 upon the filing of our federal income tax return for the year. We generally will not be subject to income taxes on our net taxable income to the extent we currently distribute our net taxable income to our stockholders and maintain our REIT qualification.

#### Our Manager

Upon completion of our initial public offering, we became externally managed and advised by Bimini Advisors and its experienced RMBS investment team pursuant to the terms of a management agreement. Our Manager is a Maryland limited liability company that is a wholly-owned subsidiary of Bimini. We believe our relationship with our Manager enables us to leverage our Manager’s established portfolio management resources for each of our targeted asset classes and its infrastructure supporting those resources. Additionally, we have benefitted and expect to continue to benefit from our Manager’s finance and administration functions, which address legal, compliance, investor relations and operational matters, including portfolio management, trade allocation and execution, securities valuation, risk management and information technologies in connection with the performance of its duties. Our Manager’s parent, Bimini commenced active investment management operations in 2003, as it self-manages its own portfolio.

Our Manager is responsible for administering our business activities and day-to-day operations. Pursuant to the terms of the management agreement, our Manager provides us with our management team, including our officers, along with appropriate support personnel. Our Manager is at all times subject to the supervision and oversight of our board

of directors (the “Board of Directors”) and has only such functions and authority as we delegate to it.

## Our Investment and Capital Allocation Strategy

### Investment Strategy

Our business objective is to provide attractive risk-adjusted total returns to our investors over the long term through a combination of capital appreciation and the payment of regular monthly distributions. We intend to achieve this objective by investing in and strategically allocating capital between pass-through Agency RMBS and structured Agency RMBS. We seek to generate income from (i) the net interest margin on our leveraged pass-through Agency RMBS portfolio and the leveraged portion of our structured Agency RMBS portfolio, and (ii) the interest income we generate from the unleveraged portion of our structured Agency RMBS portfolio. We also seek to minimize the volatility of both the net asset value of, and income from, our portfolio through a process which emphasizes capital allocation, asset selection, liquidity and active interest rate risk management.

We fund our pass-through Agency RMBS and certain of our structured Agency RMBS, such as fixed and floating rate tranches of CMOs and POs, through repurchase agreements. However, we generally do not employ leverage on our structured Agency RMBS that have no principal balance, such as IOs and IIOs. We may pledge a portion of these assets to increase our cash balance, but we do not intend to invest the cash derived from pledging the assets. Otherwise, we do not use leverage in these instances because the securities contain structural leverage.

Our target asset categories and principal assets in which we intend to invest are as follows:

#### Pass-through Agency RMBS

We invest in pass-through securities, which are securities secured by residential real property in which payments of both interest and principal on the securities are generally made monthly. In effect, these securities pass through the monthly payments made by the individual borrowers on the mortgage loans that underlie the securities, net of fees paid to the issuer or guarantor of the securities. Pass-through certificates can be divided into various categories based on the characteristics of the underlying mortgages, such as the term or whether the interest rate is fixed or variable.

The payment of principal and interest on mortgage pass-through securities issued by Ginnie Mae, but not the market value, is guaranteed by the full faith and credit of the federal government. Payment of principal and interest on mortgage pass-through certificates issued by Fannie Mae and Freddie Mac, but not the market value, is guaranteed by the respective agency issuing the security.

A key feature of most mortgage loans is the ability of the borrower to repay principal earlier than scheduled. This is called a prepayment. Prepayments arise primarily due to sale of the underlying property, refinancing or foreclosure. Prepayments result in a return of principal to pass-through certificate holders. This may result in a lower or higher rate of return upon reinvestment of principal. This is generally referred to as prepayment uncertainty. If a security purchased at a premium prepays at a higher-than-expected rate, then the value of the premium would be eroded at a faster-than-expected rate. Similarly, if a discount mortgage prepays at a lower-than-expected rate, the amortization towards par would be accumulated at a slower-than-expected rate. The possibility of these undesirable effects is sometimes referred to as “prepayment risk.”

In general, declining interest rates tend to increase prepayments, and rising interest rates tend to slow prepayments. Like other fixed-income securities, when interest rates rise, the value of Agency RMBS generally declines. The rate of prepayments on underlying mortgages will affect the price and volatility of Agency RMBS and may shorten or extend the effective maturity of the security beyond what was anticipated at the time of purchase. If interest rates rise, our

holdings of Agency RMBS may experience reduced returns if the borrowers of the underlying mortgages pay off their mortgages later than anticipated. This is generally referred to as extension risk.

The mortgage loans underlying pass-through certificates can generally be classified into the following three categories:

- **Fixed-Rate Mortgages.** Fixed-rate mortgages are those where the borrower pays an interest rate that is constant throughout the term of the loan. Traditionally, most fixed-rate mortgages have an original term of 30 years. However, shorter terms (also referred to as final maturity dates) have become common in recent years. Because the interest rate on the loan never changes, even when market interest rates change, over time there can be a divergence between the interest rate on the loan and current market interest rates. This in turn can make fixed-rate mortgages price sensitive to market fluctuations in interest rates. In general, the longer the remaining term on the mortgage loan, the greater the price sensitivity to movements in interest rates and, therefore, the likelihood for greater price variability.
- **ARMs.** ARMs are mortgages for which the borrower pays an interest rate that varies over the term of the loan. The interest rate usually resets based on market interest rates, although the adjustment of such an interest rate may be subject to certain limitations. Traditionally, interest rate resets occur at regular intervals (for example, once per year). We refer to such ARMs as “traditional” ARMs. Because the interest rates on ARMs fluctuate based on market conditions, ARMs tend to have interest rates that do not deviate from current market rates by a large amount. This in turn can mean that ARMs have less price sensitivity to interest rates and, consequently, are less likely to experience significant price volatility.
- **Hybrid Adjustable-Rate Mortgages.** Hybrid ARMs have a fixed-rate for the first few years of the loan, often three, five, seven or ten years, and thereafter reset periodically like a traditional ARM. Effectively, such mortgages are hybrids, combining the features of a pure fixed-rate mortgage and a traditional ARM. Hybrid ARMs have price sensitivity to interest rates similar to that of a fixed-rate mortgage during the period when the interest rate is fixed and similar to that of an ARM when the interest rate is in its periodic reset stage. However, because many hybrid ARMs are structured with a relatively short initial time span during which the interest rate is fixed, even during that segment of its existence, the price sensitivity may be high.

#### Structured Agency RMBS

We also invest in structured Agency RMBS, which include CMOs, IOs, IIOs and POs. The payment of principal and interest, as appropriate, on structured Agency RMBS issued by Ginnie Mae, but not the market value, is guaranteed by the full faith and credit of the federal government. Payment of principal and interest, as appropriate, on structured Agency RMBS issued by Fannie Mae and Freddie Mac, but not the market value, is guaranteed by the respective agency issuing the security. The types of structured Agency RMBS in which we invest are described below.

- **CMOs.** CMOs are a type of RMBS the principal and interest of which are paid, in most cases, on a monthly basis. CMOs may be collateralized by whole mortgage loans, but are more typically collateralized by portfolios of mortgage pass-through securities issued directly by or under the auspices of Ginnie Mae, Freddie Mac or Fannie Mae. CMOs are structured into multiple classes, with each class bearing a different stated maturity. Monthly payments of principal, including prepayments, are first returned to investors holding the shortest maturity class. Investors holding the longer maturity classes receive principal only after the first class has been retired. Generally, fixed-rate mortgages are used to collateralize CMOs. However, the CMO tranches need not all have fixed-rate coupons. Some CMO tranches have floating rate coupons that adjust based on market interest rates, subject to some limitations. Such tranches, often called “CMO floaters,” can have relatively low price sensitivity to interest rates.
- **IOs.** IOs represent the stream of interest payments on a pool of mortgages, either fixed-rate mortgages or hybrid ARMs. Holders of IOs have no claim to any principal payments. The value of IOs depends primarily on two factors, which are prepayments and interest rates. Prepayments on the underlying pool of mortgages reduce the stream of interest payments going forward, hence IOs are highly sensitive to prepayment rates. IOs are also

sensitive to changes in interest rates. An increase in interest rates reduces the present value of future interest payments on a pool of mortgages. On the other hand, an increase in interest rates has a tendency to reduce prepayments, which increases the expected absolute amount of future interest payments.

- IIOs. IIOs represent the stream of interest payments on a pool of mortgages, either fixed-rate mortgages or hybrid ARMs. Holders of IIOs have no claim to any principal payments. The value of IIOs depends primarily on three factors, which are prepayments, LIBOR rates and term interest rates. Prepayments on the underlying pool of mortgages reduce the stream of interest payments, making IIOs highly sensitive to prepayment rates. The coupon on IIOs is derived from both the coupon interest rate on the underlying pool of mortgages and 30-day LIBOR. IIOs are typically created in conjunction with a floating rate CMO that has a principal balance and which is entitled to receive all of the principal payments on the underlying pool of mortgages. The coupon on the floating rate CMO is also based on 30-day LIBOR. Typically, the coupon on the floating rate CMO and the IIO, when combined, equal the coupon on the pool of underlying mortgages. The coupon on the pool of underlying mortgages typically represents a cap or ceiling on the combined coupons of the floating rate CMO and the IIO. Accordingly, when the value of 30-day LIBOR increases, the coupon of the floating rate CMO will increase and the coupon on the IIO will decrease. When the value of 30-day LIBOR falls, the opposite is true. Accordingly, the value of IIOs are sensitive to the level of 30-day LIBOR and expectations by market participants of future movements in the level of 30-day LIBOR. IIOs are also sensitive to changes in interest rates. An increase in interest rates reduces the present value of future interest payments on a pool of mortgages. On the other hand, an increase in interest rates has a tendency to reduce prepayments, which increases the expected absolute amount of future interest payments.
- POs. POs represent the stream of principal payments on a pool of mortgages. Holders of POs have no claim to any interest payments, although the ultimate amount of principal to be received over time is known — it equals the principal balance of the underlying pool of mortgages. What is not known is the timing of the receipt of the principal payments. The value of POs depends primarily on two factors, which are prepayments and interest rates. Prepayments on the underlying pool of mortgages accelerate the stream of principal repayments, making POs highly sensitive to the rate at which the mortgages in the pool are prepaid. POs are also sensitive to changes in interest rates. An increase in interest rates reduces the present value of future principal payments on a pool of mortgages. Further, an increase in interest rates has a tendency to reduce prepayments, which decelerates, or pushes further out in time, the ultimate receipt of the principal payments. The opposite is true when interest rates decline.

Our investment strategy consists of the following components:

- investing in pass-through Agency RMBS and certain structured Agency RMBS, such as fixed and floating rate tranches of CMOs and POs, on a leveraged basis to increase returns on the capital allocated to this portfolio;
- investing in certain structured Agency RMBS, such as IOs and IIOs, generally on an unleveraged basis in order to (i) increase returns due to the structural leverage contained in such securities, (ii) enhance liquidity due to the fact that these securities will be unencumbered or, when encumbered, retain the cash from such borrowings and (iii) diversify portfolio interest rate risk due to the different interest rate sensitivity these securities have compared to pass-through Agency RMBS;
  - investing in Agency RMBS in order to minimize credit risk;
- investing in assets that will cause us to maintain our exclusion from regulation as an investment company under the Investment Company Act of 1940, as amended, ( the “Investment Company Act”); and
  - investing in assets that will allow us to qualify and maintain our qualification as a REIT.

We rely on our Manager’s expertise in identifying assets within our target asset class. Our Manager makes investment decisions based on various factors, including, but not limited to, relative value, expected cash yield, supply and demand, costs of hedging, costs of financing, liquidity requirements, expected future interest rate volatility and the overall shape of the U.S. Treasury and interest rate swap yield curves. We do not attribute any particular quantitative significance to any of these factors, and the weight we give to these factors depends on market conditions and economic trends.

Over time, we will modify our investment strategy as market conditions change to seek to maximize the returns from our investment portfolio. We believe that this strategy, combined with our Manager's experience, will enable us to provide attractive long-term returns to our stockholders.

4

---

## Capital Allocation Strategy

The percentage of capital invested in our two asset categories will vary and will be managed in an effort to maintain the level of income generated by the combined portfolios, the stability of that income stream and the stability of the value of the combined portfolios. Typically, pass-through Agency RMBS and structured Agency RMBS exhibit materially different sensitivities to movements in interest rates. Declines in the value of one portfolio may be offset by appreciation in the other, although we cannot assure you that this will be the case. Additionally, our Manager will seek to maintain adequate liquidity as it allocates capital.

We allocate our capital to assist our interest rate risk management efforts. The unleveraged portfolio does not require unencumbered cash or cash equivalents to be maintained in anticipation of possible margin calls. To the extent more capital is deployed in the unleveraged portfolio, our liquidity needs will generally be less.

During periods of rising interest rates, refinancing opportunities available to borrowers typically decrease because borrowers are not able to refinance their current mortgage loans with new mortgage loans at lower interest rates. In such instances, securities that are highly sensitive to refinancing activity, such as IOs and IIOs, typically increase in value. Our capital allocation strategy allows us to redeploy our capital into such securities when and if we believe interest rates will be higher in the future, thereby allowing us to hold securities the value of which we believe is likely to increase as interest rates rise. Also, by being able to re-allocate capital into structured Agency RMBS, such as IOs, during periods of rising interest rates, we may be able to offset the likely decline in the value of our pass-through Agency RMBS, which are negatively impacted by rising interest rates.

We intend to qualify as a REIT and operate in a manner that will not subject us to regulation under the Investment Company Act. In order to rely on the exemption provided by Section 3(c)(5)(C) under the Investment Company Act, we must maintain at least 55% of our assets in qualifying real estate assets. For purposes of this test, structured Agency RMBS are non-qualifying real estate assets. Accordingly, while we have no explicit limitation on the amount of our capital that we will deploy to the unleveraged structured Agency RMBS portfolio, we will deploy our capital in such a way so as to maintain our exemption from registration under the Investment Company Act.

## Financing Strategy

We borrow against our Agency RMBS using short term repurchase agreements. We may use other sources of leverage, such as secured or unsecured debt or issuances of preferred stock. We do not have a policy limiting the amount of leverage we may incur. However, we generally expect that the ratio of our total liabilities compared to our equity, which we refer to as our leverage ratio, will be less than 12 to 1. Our amount of leverage may vary depending on market conditions and other factors that we deem relevant.

We allocate our capital between two sub-portfolios. The pass-through Agency RMBS portfolio will be leveraged generally via repurchase agreement funding. The structured Agency RMBS portfolio generally will not be leveraged. The leverage ratio is calculated by dividing our total liabilities by total stockholders' equity at the end of each period. The amount of leverage will be a function of the capital allocated to the pass-through Agency RMBS portfolio and the amount of haircuts required by our lenders on our borrowings. When the capital allocation to the pass-through Agency RMBS portfolio is high, the leverage ratio will be high since more capital is being explicitly leveraged and less capital is un-leveraged. If the haircuts required by our lenders on our borrowings are higher, all else being equal, our leverage will be lower since our lenders will lend less against the value of the capital deployed to the pass-through Agency RMBS portfolio. The allocation of capital between the two portfolios will be a function of several factors:

• The relative durations of the respective portfolios — We generally seek to have a combined duration at or near zero. If our pass-through securities have a longer duration, we will allocate more capital to the structured security portfolio to achieve a combined duration close to zero.

•The relative attractiveness of pass-through securities versus structured securities — To the extent we believe the expected returns of one type of security are higher than the other, we will allocate more capital to the more attractive securities, subject to the caveat that its combined duration remains at or near zero.

•Liquidity — We seek to maintain adequate cash and unencumbered securities relative to our repurchase agreement borrowings to ensure we can meet any price or prepayment related margin calls from our lenders. To the extent we feel price or prepayment related margin calls will be higher/lower, we will allocate less/more capital to the pass-through Agency RMBS portfolio. Our pass-through Agency RMBS portfolio likely will be our only source of price or prepayment related margin calls because we generally will not apply leverage to our structured Agency RMBS portfolio. From time to time we may pledge a portion of our structured securities and retain the cash derived so it can be used to enhance our liquidity.

## Risk Management

We invest in Agency RMBS to mitigate credit risk. Additionally, our Agency RMBS are backed by a diversified base of mortgage loans to mitigate geographic, loan originator and other types of concentration risks.

### Interest Rate Risk Management

We believe that the risk of adverse interest rate movements represents the most significant risk to our portfolio. This risk arises because (i) the interest rate indices used to calculate the interest rates on the mortgages underlying our assets may be different from the interest rate indices used to calculate the interest rates on the related borrowings, and (ii) interest rate movements affecting our borrowings may not be reasonably correlated with interest rate movements affecting our assets. We attempt to mitigate our interest rate risk by using the following techniques:

**Agency RMBS Backed by ARMs.** We seek to minimize the differences between interest rate indices and interest rate adjustment periods of our Agency RMBS backed by ARMs and related borrowings. At the time of funding, we typically align (i) the underlying interest rate index used to calculate interest rates for our Agency RMBS backed by ARMs and the related borrowings and (ii) the interest rate adjustment periods for our Agency RMBS backed by ARMs and the interest rate adjustment periods for our related borrowings. As our borrowings mature or are renewed, we may adjust the index used to calculate interest expense, the duration of the reset periods and the maturities of our borrowings.

**Agency RMBS Backed by Fixed-Rate Mortgages.** As interest rates rise, our borrowing costs increase; however, the income on our Agency RMBS backed by fixed-rate mortgages remains unchanged. Subject to qualifying and maintaining a qualification as a REIT, we may seek to limit increases to our borrowing costs through the use of interest rate swap or cap agreements, options, put or call agreements, futures contracts, forward rate agreements or similar financial instruments to effectively convert our floating-rate borrowings into fixed-rate borrowings.

**Agency RMBS Backed by Hybrid ARMs.** During the fixed-rate period of our Agency RMBS backed by hybrid ARMs, the security is similar to Agency RMBS backed by fixed-rate mortgages. During this period, subject to qualifying and maintaining a qualification as a REIT, we may employ the same hedging strategy that we employ for our Agency RMBS backed by fixed-rate mortgages. Once our Agency RMBS backed by hybrid ARMs convert to floating rate securities, we may employ the same hedging strategy as we employ for our Agency RMBS backed by ARMs.

**Eurodollar Futures Contracts.** We enter into Eurodollar futures contracts to economically hedge against the possibility that rising rates may adversely impact our repurchase agreement liabilities. Repurchase agreements are structured such that the rate resets on a short term basis, and selling Eurodollar futures in a rising rate environment works to offset the funding costs associated with repurchase agreements.

Additionally, our structured Agency RMBS generally exhibit sensitivities to movements in interest rates different than our pass-through Agency RMBS. To the extent they do so, our structured Agency RMBS may protect us against declines in the market value of our combined portfolio that result from adverse interest rate movements, although we cannot assure you that this will be the case.

### Prepayment Risk Management

The risk of mortgage prepayments is another significant risk to our portfolio. When prevailing interest rates fall below the coupon rate of a mortgage, mortgage prepayments are likely to increase. Conversely, when prevailing interest rates increase above the coupon rate of a mortgage, mortgage prepayments are likely to decrease.

When prepayment rates increase, we may not be able to reinvest the money received from prepayments at yields comparable to those of the securities prepaid. Also, some ARMs and hybrid ARMs which back our Agency RMBS may bear initial “teaser” interest rates that are lower than their fully-indexed interest rates. If these mortgages are prepaid during this “teaser” period, we may lose the opportunity to receive interest payments at the higher, fully-indexed rate over the expected life of the security. Additionally, some of our structured Agency RMBS, such as IOs and IIOs, may be negatively affected by an increase in prepayment rates because their value is wholly contingent on the underlying mortgage loans having an outstanding principal balance.

A decrease in prepayment rates may also have an adverse effect on our portfolio. For example, if we invest in POs, the purchase price of such securities will be based, in part, on an assumed level of prepayments on the underlying mortgage loan. Because the returns on POs decrease the longer it takes the principal payments on the underlying loans to be paid, a decrease in prepayment rates could decrease our returns on these securities.

Prepayment risk also affects our hedging activities. When an Agency RMBS backed by a fixed-rate mortgage or hybrid ARM is acquired with borrowings, we may cap or fix our borrowing costs for a period close to the anticipated average life of the fixed-rate portion of the related Agency RMBS. If prepayment rates are different than our projections, the term of the related hedging instrument may not match the fixed-rate portion of the security, which could cause us to incur losses.

Because our business may be adversely affected if prepayment rates are different than our projections, we seek to invest in Agency RMBS backed by mortgages with well-documented and predictable prepayment histories. To protect against increases in prepayment rates, we invest in Agency RMBS backed by mortgages that we believe are less likely to be prepaid. For example, we invest in Agency RMBS backed by mortgages (i) with loan balances low enough such that a borrower would likely have little incentive to refinance, (ii) extended to borrowers with credit histories weak enough to not be eligible to refinance their mortgage loans, (iii) that are newly originated fixed-rate or hybrid ARMs or (iv) that have interest rates low enough such that a borrower would likely have little incentive to refinance. To protect against decreases in prepayment rates, we may also invest in Agency RMBS backed by mortgages with characteristics opposite to those described above, which would typically be more likely to be refinanced. We may also invest in certain types of structured Agency RMBS as a means of mitigating our portfolio-wide prepayment risks. For example, certain tranches of CMOs are less sensitive to increases in prepayment rates, and we may invest in those tranches as a means of hedging against increases in prepayment rates.

### Liquidity Management Strategy

Because of our use of leverage, we manage liquidity to meet our lenders’ margin calls using the following measures:

- Maintaining cash balances or unencumbered assets well in excess of anticipated margin calls; and
- Making margin calls on our lenders when we have an excess of collateral pledged against our borrowings.

We also attempt to minimize the number of margin calls we receive by:

- Deploying capital from our leveraged Agency RMBS portfolio to our unleveraged Agency RMBS portfolio;
- Investing in Agency RMBS backed by mortgages that we believe are less likely to be prepaid to decrease the risk of excessive margin calls when monthly prepayments are announced. Prepayments are declared, and the market value of the related security declines, before the receipt of the related cash flows. Prepayment declarations give rise to a temporary collateral deficiency and generally results in margin calls by lenders;
- Obtaining funding arrangements which defer or waive prepayment-related margin requirements in exchange for payments to the lender tied to the dollar amount of the collateral deficiency and a predetermined interest rate; and
  - Reducing our overall amount of leverage.

To the extent we are unable to adequately manage our interest rate exposure and are subjected to substantial margin calls, we may be forced to sell assets at an inopportune time which in turn could impair our liquidity and reduce our borrowing capacity and book value.

#### Tax Structure

Upon filing our federal income tax return for our short taxable year ended December 31, 2013, we will elect to be taxed as a REIT. Our qualification as a REIT, and the maintenance of such qualification, will depend upon our ability to meet, on a continuing basis, various complex requirements under the U.S. Internal Revenue Code (the "Code") relating to, among other things, the sources of our gross income, the composition and values of our assets, our distribution levels and the concentration of ownership of our capital stock. We believe that we have been organized and have operated in conformity with the requirements for qualification and taxation as a REIT under the Code, and we intend to continue to operate in a manner that will enable us to meet the requirements for qualification and taxation as a REIT.

As a REIT, we generally will not be subject to U.S. federal income tax on the REIT taxable income that we currently distribute to our stockholders. Taxable income generated by any taxable REIT subsidiary ("TRS") that we may form or acquire will be subject to federal, state and local income tax. Under the Code, REITs are subject to numerous organizational and operational requirements, including a requirement that they distribute annually at least 90% of their REIT taxable income, determined without regard to the deduction for dividends paid and excluding any net capital gains. If we fail to qualify as a REIT in any calendar year and do not qualify for certain statutory relief provisions, our income would be subject to U.S. federal income tax, and we would likely be precluded from qualifying for treatment as a REIT until the fifth calendar year following the year in which we failed to qualify. Even if we qualify as a REIT, we may still be subject to certain federal, state and local taxes on our income and assets and to U.S. federal income and excise taxes on our undistributed income.

#### Investment Company Act Exemption

We operate our business so that we are exempt from registration under the Investment Company Act. We rely on the exemption provided by Section 3(c)(5)(C) of the Investment Company Act, which applies to companies in the business of purchasing or otherwise acquiring mortgages and other liens on, and interests in, real estate. In order to rely on the exemption provided by Section 3(c)(5)(C), we must maintain at least 55% of our assets in qualifying real estate assets. For the purposes of this test, structured Agency RMBS are non-qualifying real estate assets. We monitor our portfolio periodically and prior to each investment to confirm that we continue to qualify for the exemption. To qualify for the exemption, we make investments so that at least 55% of the assets we own on an unconsolidated basis

consist of qualifying mortgages and other liens on and interests in real estate, which we refer to as qualifying real estate assets, and so that at least 80% of the assets we own on an unconsolidated basis consist of real estate-related assets, including our qualifying real estate assets.

We treat whole-pool pass-through Agency RMBS as qualifying real estate assets based on no-action letters issued by the Staff of the SEC. In August 2011, the SEC, through a concept release, requested comments on interpretations of Section 3(c)(5)(C). To the extent that the SEC or its staff publishes new or different guidance with respect to these matters, we may fail to qualify for this exemption. Our Manager intends to manage our pass-through Agency RMBS portfolio such that we will have sufficient whole-pool pass-through Agency RMBS to ensure we maintain our exemption from registration under the Investment Company Act. At present, we generally do not expect that our investments in structured Agency RMBS will constitute qualifying real estate assets but will constitute real estate-related assets for purposes of the Investment Company Act.

#### Employees

We have no employees. We are externally managed and advised by our Manager pursuant to a management agreement as discussed below.

#### Competition

Our net income largely depends on our ability to acquire Agency RMBS at favorable spreads over our borrowing costs. When we invest in Agency RMBS and other investment assets, we compete with a variety of institutional investors, including other REITs, insurance companies, mutual funds, pension funds, investment banking firms, banks and other financial institutions that invest in the same types of assets, the Federal Reserve Bank and other governmental entities or government-sponsored entities. Many of these investors have greater financial resources and access to lower costs of capital than we do. The existence of these competitive entities, as well as the possibility of additional entities forming in the future, may increase the competition for the acquisition of mortgage related securities, resulting in higher prices and lower yields on assets.

#### Distributions

To maintain a qualification as a REIT, we must distribute substantially all of our REIT taxable income (as defined in the Code) to our stockholders for each year. We plan to continue to declare and pay regular monthly dividends to our stockholders.

#### Available Information

Our investor relations website is [www.orchidislandcapital.com](http://www.orchidislandcapital.com). We make available on the website under "Financial Information/SEC filings," free of charge, our annual report on Form 10-K, our quarterly reports on Form 10-Q, our current reports on Form 8-K and any other reports (including any amendments to such reports) as soon as reasonably practicable after we electronically file or furnish such materials to the SEC. Information on our website, however, is not part of this Annual Report on Form 10-K. All reports filed with the SEC may also be read and copied at the SEC's public reference room at 100 F Street, N.E., Washington, D.C. 20549. Further information regarding the operation of the public reference room may be obtained by calling 1-800-SEC-0330. In addition, all of our filed reports can be obtained at the SEC's website at [www.sec.gov](http://www.sec.gov).

ITEM 1A. RISK FACTORS

You should carefully consider the risks described below and all other information contained in this Annual Report on Form 10-K, including our annual financial statements and related notes thereto, before making an investment decision regarding our common stock. Our business, financial condition or results of operations could be harmed by any of these risks. Similarly, these risks could cause the market price of our common stock to decline and you might lose all or part of your investment. Our forward-looking statements in this annual report are subject to the following risks and uncertainties. Our actual results could differ materially from those anticipated by our forward-looking statements as a result of the risk factors below.

Risks Related to Our Business

The U.S. Federal Reserve's recent announcement that it would reduce its monthly purchases pursuant to QE3 could impact the market for and value of the Agency RMBS in which we invest as well as our net asset value and net interest margin.

On September 13, 2012, the U.S. Federal Reserve announced a third round of quantitative easing ("QE3"), which is an open-ended program designed to expand the Federal Reserve's holdings of long-term securities by purchasing an additional \$40 billion of Agency RMBS per month until key economic indicators, such as the unemployment rate, show signs of improvement. In December 2012, the U.S. Federal Reserve announced that it would begin buying \$45 billion of long-term Treasury bonds each month. On December 18, 2013, the U.S. Federal Reserve announced that it would reduce its purchases of Agency RMBS by \$5 billion per month and reduce its purchases of Treasury bonds by \$5 billion per month beginning in January 2014. On January 29, 2014, the U.S. Federal Reserve announced additional \$5 billion reductions to its monthly purchases of both Agency RMBS and Treasury bonds to take effect in February 2014.

The immediate effect of the announcement of QE3 was an increase in Agency RMBS prices. Since the initial price spike, prices for all securities have receded below the price levels that existed before the announcement of QE3. It is unclear what effect, if any, the incremental reduction in the rate of the U.S. Federal Reserve's monthly purchases will have on the value of the Agency RMBS in which we invest. However, it is possible that the market for such securities, the price of such securities and, as a result, our net asset value and net interest margin could be negatively affected.

Adverse developments in the broader residential mortgage market may materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

The residential mortgage market in the United States has experienced a variety of difficulties and changed economic conditions, including defaults, credit losses and liquidity concerns over the past few years. In addition, certain commercial banks, investment banks and insurance companies have announced extensive losses from exposure to the residential mortgage market. These losses have reduced financial industry capital, leading to reduced liquidity for some institutions. These factors have impacted investor perception of the risk associated with real estate-related assets, including Agency RMBS. As a result, values for RMBS, including some Agency RMBS and other AAA-rated RMBS assets, have been negatively impacted at times. Further increased volatility and deterioration in the broader residential mortgage and RMBS markets may adversely affect the performance and market value of the Agency RMBS in which we invest.

We rely on our Agency RMBS as collateral for our financings. Any decline in their value, or perceived market uncertainty about their value, would likely make it difficult for us to obtain financing on favorable terms or at all or

maintain our compliance with terms of any financing arrangements already in place. Additionally, we have elected to account for our investment in RMBS under the fair value option and, therefore, such investment will be reported on our financial statements at fair value with unrealized gains or losses included in earnings. If market conditions result in a decline in the value of our Agency RMBS, our business, financial position and results of operations and our ability to pay distributions to our stockholders could be materially adversely affected.

Interest rate mismatches between our Agency RMBS and our borrowings may reduce our net interest margin during periods of changing interest rates, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Our portfolio includes Agency RMBS backed by ARMs, hybrid ARMs and fixed-rate mortgages, and the mix of these securities in the portfolio may be increased or decreased over time. Additionally, the interest rates on ARMs and hybrid ARMs may vary over time based on changes in a short-term interest rate index, of which there are many.

We finance our acquisitions of pass-through Agency RMBS with short-term financing. During periods of rising short-term interest rates, the income we earn on these securities will not change (with respect to Agency RMBS backed by fixed-rate mortgage loans) or will not increase at the same rate (with respect to Agency RMBS backed by ARMs and hybrid ARMs) as our related financing costs, which may reduce our net interest margin or result in losses.

Separate legislation has been introduced in both houses of the U.S. Congress, which would, among other things, revoke the charters of Fannie Mae and Freddie Mac, which could materially adversely affect us if these proposed laws were enacted.

On June 25, 2013, a bipartisan group of senators introduced the Housing Finance Reform and Taxpayer Protection Act of 2013, which may serve as a catalyst for congressional discussion on the reform of Fannie Mae and Freddie Mac, to the U.S. Senate. On July 11, 2013, members of the House Committee on Financial Services introduced the Protecting American Taxpayers and Homeowners Act to the U.S. House of Representatives.

While the two bills are distinguishable in many respects, they have some notable commonalities. Both bills call for the revocation of the charters of Fannie Mae and Freddie Mac and seek to increase the opportunities for private capital to participate in, and consequently bear the risk of loss in connection with, government-guaranteed mortgage back securities. Both bills also have considerable support in their respective houses of Congress, which suggests that efforts to reform and possibly eliminate Fannie Mae and Freddie Mac may be gaining momentum.

The passage of any new legislation affecting Fannie Mae and Freddie Mac may create market uncertainty and reduce the actual or perceived credit quality of securities issued or guaranteed by the U.S. government through a new or existing successor entity to Fannie Mae and Freddie Mac. If the charters of Fannie Mae and Freddie Mac were revoked, it is unclear what effect, if any, this would have on the value of the existing Fannie Mae and Freddie Mac Agency RMBS. It is also possible that the above-referenced proposed legislation, if made law, could adversely impact the market for securities issued or guaranteed by the U.S. government and the spreads at which they trade. The foregoing could materially adversely affect the pricing, supply, liquidity and value of our target assets and otherwise materially adversely affect our business, operations and financial condition.

We cannot predict the impact, if any, on our earnings or cash available for distribution to our stockholders of the FHFA's proposed revisions to Fannie Mae's, Freddie Mac's and Ginnie Mae's existing infrastructures to align the standards and practices of the three entities.

On February 21, 2012, the FHFA released its Strategic Plan for Enterprise Conservatorships, which set forth three goals for the next phase of the Fannie Mae and Freddie Mac conservatorships. These three goals are to (i) build a new infrastructure for the secondary mortgage market, (ii) gradually contract Fannie Mae and Freddie Mac's presence in the marketplace while simplifying and shrinking their operations, and (iii) maintain foreclosure prevention activities and credit availability for new and refinanced mortgages. On October 4, 2012, the FHFA released its white paper entitled Building a New Infrastructure for the Secondary Mortgage Market, which proposes a new infrastructure for Fannie Mae and Freddie Mac that has two basic goals.

The first such goal is to replace the current, outdated infrastructures of Fannie Mae and Freddie Mac with a common, more efficient infrastructure that aligns the standards and practices of the two entities, beginning with core functions performed by both entities such as issuance, master servicing, bond administration, collateral management and data integration. The second goal is to establish an operating framework for Fannie Mae and Freddie Mac that is consistent with the progress of housing finance reform and encourages and accommodates the increased participation of private capital in assuming credit risk associated with the secondary mortgage market.

The FHFA recognizes that there are a number of impediments to their goals which may or may not be surmountable, such as the absence of any significant secondary mortgage market mechanisms beyond Fannie Mae, Freddie Mac and Ginnie Mae, and that their proposals are in the formative stages. As a result, it is unclear if the proposals will be enacted. If such proposals are enacted, it is unclear how closely what is enacted will resemble the proposals from the FHFA White Paper or what the effects of the enactment will be in terms of our net asset value, earnings or cash available for distribution to our stockholders.

Mortgage loan modification programs and future legislative action may adversely affect the value of, and the returns on, our Agency RMBS, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

During the second half of 2008, the U.S. Government commenced programs designed to provide homeowners with assistance in avoiding residential mortgage loan foreclosures. The programs involve, among other things, the modification of mortgage loans to reduce the principal amount of the loans or the rate of interest payable on the loans, or to extend the payment terms of the loans.

In addition, in February 2008, the U.S. Treasury announced the Homeowner Affordability and Stability Plan, or HASP, which is a multi-faceted plan intended to prevent residential mortgage foreclosures by, among other things:

- allowing certain homeowners whose homes are encumbered by Fannie Mae or Freddie Mac conforming mortgages to refinance those mortgages into lower interest rate mortgages with either Fannie Mae or Freddie Mac;
- creating the Homeowner Stability Initiative, which is intended to utilize various incentives for banks and mortgage servicers to modify residential mortgage loans with the goal of reducing monthly mortgage principal and interest payments for certain qualified homeowners; and
- allowing judicial modifications of Fannie Mae and Freddie Mac conforming residential mortgages loans during bankruptcy proceedings.

In October 2011, the FHFA announced proposed changes to the Home Affordable Refinance Program, or HARP, that would expand access to refinancing for qualified individuals and families whose homes have lost value by, among other things, increasing the HARP loan-to-value ratio above 125%. However, this would only apply to mortgages guaranteed by the GSEs. There are many challenging issues to this proposal, notably the question as to whether a loan with a loan-to-value ratio of 125% qualifies as a mortgage or an unsecured consumer loan.

On January 4, 2012, the Federal Reserve issued a white paper outlining additional ideas with regard to refinancings and loan modifications. It is likely that loan modifications would result in increased prepayments on some Agency RMBS. As described elsewhere, prepayments could negatively affect the value of our Agency RMBS, which could result in reduced earnings or losses and negatively affect the cash available for distribution to our stockholders. These initiatives, any future loan modification programs and future legislative or regulatory actions, including amendments to the bankruptcy laws, that result in the modification of outstanding mortgage loans may adversely affect the value of, and the returns on, the Agency RMBS in which we invest.

We invest in structured Agency RMBS, including CMOs, IOs, IIOs and POs. Although structured Agency RMBS are generally subject to the same risks as our pass-through Agency RMBS, certain types of risks may be enhanced depending on the type of structured Agency RMBS in which we invest.

The structured Agency RMBS in which we invest are securitizations (i) issued by Fannie Mae, Freddie Mac or Ginnie Mae, (ii) collateralized by Agency RMBS and (iii) divided into various tranches that have different characteristics (such as different maturities or different coupon payments). These securities may carry greater risk than an investment in pass-through Agency RMBS. For example, certain types of structured Agency RMBS, such as IOs, IIOs and POs, are more sensitive to prepayment risks than pass-through Agency RMBS. If we were to invest in structured Agency RMBS that were more sensitive to prepayment risks relative to other types of structured Agency RMBS or pass-through Agency RMBS, we may increase our portfolio-wide prepayment risk.

Increased levels of prepayments on the mortgages underlying our Agency RMBS might decrease net interest income or result in a net loss, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

In the case of residential mortgages, there are seldom any restrictions on borrowers' ability to prepay their loans. Prepayment rates generally increase when interest rates fall and decrease when interest rates rise. Prepayment rates also may be affected by other factors, including, without limitation, conditions in the housing and financial markets, governmental action, general economic conditions and the relative interest rates on ARMs, hybrid ARMs and fixed-rate mortgage loans. With respect to pass-through Agency RMBS, faster-than-expected prepayments could also materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders in various ways, including the following:

- A portion of our pass-through Agency RMBS backed by ARMs and hybrid ARMs may initially bear interest at rates that are lower than their fully indexed rates, which are equivalent to the applicable index rate plus a margin. If a pass-through Agency RMBS backed by ARMs or hybrid ARMs is prepaid prior to or soon after the time of adjustment to a fully-indexed rate, we will have held that Agency RMBS while it was less profitable and lost the opportunity to receive interest at the fully-indexed rate over the remainder of its expected life.
- If we are unable to acquire new Agency RMBS to replace the prepaid Agency RMBS, our returns on capital may be lower than if we were able to quickly acquire new Agency RMBS.

When we acquire structured Agency RMBS, we anticipate that the underlying mortgages will prepay at a projected rate, generating an expected yield. When the prepayment rates on the mortgages underlying our structured Agency RMBS are higher than expected, our returns on those securities may be materially adversely affected. For example, the value of our IOs and IIOs are extremely sensitive to prepayments because holders of these securities do not have the right to receive any principal payments on the underlying mortgages. Therefore, if the mortgage loans underlying our IOs and IIOs are prepaid, such securities would cease to have any value, which, in turn, could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

While we seek to minimize prepayment risk, we must balance prepayment risk against other risks and the potential returns of each investment. No strategy can completely insulate us from prepayment or other such risks.

A decrease in prepayment rates on the mortgages underlying our Agency RMBS might decrease net interest income or result in a net loss, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Certain of our structured Agency RMBS may be adversely affected by a decrease in prepayment rates. For example, because POs are similar to zero-coupon bonds, our expected returns on such securities will be contingent on our receiving the principal payments of the underlying mortgage loans at expected intervals that assume a certain prepayment rate. If prepayment rates are lower than expected, we will not receive principal payments as quickly as we anticipated and, therefore, our expected returns on these securities will be adversely affected, which, in turn, could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

While we seek to minimize prepayment risk, we must balance prepayment risk against other risks and the potential returns of each investment. No strategy can completely insulate us from prepayment or other such risks.

Interest rate caps on the ARMs and hybrid ARMs backing our Agency RMBS may reduce our net interest margin during periods of rising interest rates, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

ARMs and hybrid ARMs are typically subject to periodic and lifetime interest rate caps. Periodic interest rate caps limit the amount an interest rate can increase during any given period. Lifetime interest rate caps limit the amount an interest rate can increase through the maturity of the loan. Our borrowings typically are not subject to similar restrictions. Accordingly, in a period of rapidly increasing interest rates, our financing costs could increase without limitation while caps could limit the interest we earn on the ARMs and hybrid ARMs backing our Agency RMBS. This problem is magnified for ARMs and hybrid ARMs that are not fully indexed because such periodic interest rate caps prevent the coupon on the security from fully reaching the specified rate in one reset. Further, some ARMs and hybrid ARMs may be subject to periodic payment caps that result in a portion of the interest being deferred and added to the principal outstanding. As a result, we may receive less cash income on Agency RMBS backed by ARMs and hybrid ARMs than necessary to pay interest on our related borrowings. Interest rate caps on Agency RMBS backed by ARMs and hybrid ARMs could reduce our net interest margin if interest rates were to increase beyond the level of the caps, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

We rely on analytical models and other data to analyze potential asset acquisition and disposition opportunities and to manage our portfolio. Such models and other data may be incorrect, misleading or incomplete, which could cause us to purchase assets that do not meet our expectations or to make asset management decisions that are not in line with our strategy.

We rely on analytical models, and information and other data supplied by third parties. These models and data may be used to value assets or potential asset acquisitions and dispositions and in connection with our asset management activities. If our models and data prove to be incorrect, misleading or incomplete, any decisions made in reliance thereon could expose us to potential risks.

Our reliance on models and data may induce us to purchase certain assets at prices that are too high, to sell certain other assets at prices that are too low or to miss favorable opportunities altogether. Similarly, any hedging activities that are based on faulty models and data may prove to be unsuccessful.

Some models, such as prepayment models, may be predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses. In addition, the predictive models used by us may differ substantially from those models used by other market participants, resulting in valuations based on these predictive models that may be substantially higher or lower for certain assets than actual market prices. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data, and, in the case of predicting performance in scenarios with little or no historical precedent (such as extreme broad-based declines in home prices, or deep economic recessions or depressions), such models must employ greater degrees of extrapolation and are therefore more speculative and less reliable.

All valuation models rely on correct market data input. If incorrect market data is entered into even a well-founded valuation model, the resulting valuations will be incorrect. However, even if market data is inputted correctly, “model prices” will often differ substantially from market prices, especially for securities with complex characteristics or whose values are particularly sensitive to various factors. If our market data inputs are incorrect or our model prices differ substantially from market prices, our business, financial condition and results of operations and our ability to make distributions to our stockholders could be materially adversely affected.

Valuations of some of our assets are inherently uncertain, may be based on estimates, may fluctuate over short periods of time and may differ from the values that would have been used if a ready market for these assets existed. As a result, the values of some of our assets are uncertain.

While in many cases our determination of the fair value of our assets is based on valuations provided by third-party dealers and pricing services, we can and do value assets based upon our judgment, and such valuations may differ from those provided by third-party dealers and pricing services. Valuations of certain assets are often difficult to obtain or are unreliable. In general, dealers and pricing services heavily disclaim their valuations. Additionally, dealers may claim to furnish valuations only as an accommodation and without special compensation, and so they may disclaim any and all liability for any direct, incidental or consequential damages arising out of any inaccuracy or incompleteness in valuations, including any act of negligence or breach of any warranty. Depending on the complexity and illiquidity of an asset, valuations of the same asset can vary substantially from one dealer or pricing service to another. The valuation process has been particularly difficult recently because market events have made valuations of certain assets more difficult and unpredictable and the disparity of valuations provided by third-party dealers has widened.

Our business, financial condition and results of operations and our ability to make distributions to our stockholders could be materially adversely affected if our fair value determinations of these assets were materially higher than the values that would exist if a ready market existed for these assets.

An increase in interest rates may cause a decrease in the volume of newly issued, or investor demand for, Agency RMBS, which could materially adversely affect our ability to acquire assets that satisfy our investment objectives and our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Rising interest rates generally reduce the demand for consumer credit, including mortgage loans, due to the higher cost of borrowing. A reduction in the volume of mortgage loans may affect the volume of Agency RMBS available to us, which could affect our ability to acquire assets that satisfy our investment objectives. Rising interest rates may also cause Agency RMBS that were issued prior to an interest rate increase to provide yields that exceed prevailing market interest rates. If rising interest rates cause us to be unable to acquire a sufficient volume of Agency RMBS or Agency RMBS with a yield that exceeds our borrowing costs, our ability to satisfy our investment objectives and to generate

income and pay dividends, our business, financial condition and results of operations and our ability to pay distributions to our stockholders may be materially adversely affected.

Because the assets that we acquire might experience periods of illiquidity, we might be prevented from selling our Agency RMBS at favorable times and prices, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Agency RMBS might experience periods of illiquidity. Such conditions are more likely to occur for structured Agency RMBS because such securities are generally traded in markets much less liquid than the pass-through Agency RMBS market. As a result, we may be unable to dispose of our Agency RMBS at advantageous times and prices or in a timely manner. The lack of liquidity might result from the absence of a willing buyer or an established market for these assets as well as legal or contractual restrictions on resale. The illiquidity of Agency RMBS could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Our use of leverage could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

We calculate our leverage ratio by dividing our total liabilities by total equity at the end of each period. Under normal market conditions, we generally expect our leverage ratio to be less than 12 to 1, although at times our borrowings may be above or below this level. We incur this indebtedness by borrowing against a substantial portion of the market value of our pass-through Agency RMBS and a portion of our structured Agency RMBS. Our total indebtedness, however, is not expressly limited by our policies and will depend on our prospective lenders' estimates of the stability of our portfolio's cash flow. As a result, there is no limit on the amount of leverage that we may incur. We face the risk that we might not be able to meet our debt service obligations or a lender's margin requirements from our income and, to the extent we cannot, we might be forced to liquidate some of our Agency RMBS at unfavorable prices. Our use of leverage could materially adversely affect our business, financial condition and results of operation and our ability to pay distributions to our stockholders. For example:

- our borrowings are secured by our pass-through Agency RMBS and a portion of our structured Agency RMBS under repurchase agreements. A decline in the market value of the pass-through Agency RMBS or structured Agency RMBS used to secure these debt obligations could limit our ability to borrow or result in lenders requiring us to pledge additional collateral to secure our borrowings. In that situation, we could be required to sell Agency RMBS under adverse market conditions in order to obtain the additional collateral required by the lender. If these sales are made at prices lower than the carrying value of the Agency RMBS, we would experience losses.
- to the extent we are compelled to liquidate qualifying real estate assets to repay debts, our compliance with the REIT rules regarding our assets and our sources of gross income could be negatively affected, which could jeopardize our qualification as a REIT. Losing our REIT qualification would cause us to be subject to U.S. federal income tax (and any applicable state and local taxes) on all of our income and would decrease profitability and cash available for distributions to stockholders.

If we experience losses as a result of our use of leverage, such losses could materially adversely affect our business, results of operations and financial condition and our ability to make distributions to our stockholders.

We may incur increased borrowing costs, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Our borrowing costs under repurchase agreements are generally adjustable and correspond to short-term interest rates, such as the London Interbank Offered Rate, or LIBOR, or a short-term U.S. Treasury index, plus or minus a margin. The margins on these borrowings over or under short-term interest rates may vary depending upon a number of

factors, including, without limitation:

- the movement of interest rates;
- the availability of financing in the market; and
- the value and liquidity of our Agency RMBS.

All of our current short-term borrowings are collateralized borrowings in the form of repurchase agreements. If the interest rates on these repurchase agreements increase, our business, financial condition and results of operations and our ability to pay distributions to our stockholders could be materially adversely affected.

Failure to procure adequate repurchase agreement financing, or to renew or replace existing repurchase agreement financing as it matures, could materially adversely affect our business, financial condition and results of operations and our ability to make distributions to our stockholders.

We intend to maintain master repurchase agreements with several counterparties. We cannot assure you that any, or sufficient, repurchase agreement financing will be available to us in the future on terms that are acceptable to us. Any decline in the value of Agency RMBS, or perceived market uncertainty about their value, would make it more difficult for us to obtain financing on favorable terms or at all, or maintain our compliance with the terms of any financing arrangements already in place. Additionally, our lenders may have owned or financed RMBS that have declined in value and caused the lender to suffer losses as a result of the recent downturn in the residential mortgage market. If these conditions persist, these institutions may be forced to exit the repurchase market, become insolvent or further tighten lending standards or increase the amount of equity capital, or haircuts, required to obtain financing, and in such event, could make it more difficult for us to obtain financing on favorable terms or at all. Additionally, we may be unable to diversify the credit risk associated with our lenders. In the event that we cannot obtain sufficient funding on acceptable terms, our business, financial condition and results of operations and our ability to pay distributions to our stockholders may be materially adversely effected.

Furthermore, because we intend to rely primarily on short-term borrowings to fund our acquisition of Agency RMBS, our ability to achieve our investment objective will depend not only on our ability to borrow money in sufficient amounts and on favorable terms, but also on our ability to renew or replace on a continuous basis our maturing short-term borrowings. If we are not able to renew or replace maturing borrowings, we will have to sell some or all of our assets, possibly under adverse market conditions. In addition, if the regulatory capital requirements imposed on our lenders change, they may be required to significantly increase the cost of the financing that they provide to us. Our lenders also may revise their eligibility requirements for the types of assets they are willing to finance or the terms of such financings, based on, among other factors, the regulatory environment and their management of perceived risk.

Adverse market developments could cause our lenders to require us to pledge additional assets as collateral. If our assets were insufficient to meet these collateral requirements, we might be compelled to liquidate particular assets at inopportune times and at unfavorable prices, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Adverse market developments, including a sharp or prolonged rise in interest rates, a change in prepayment rates or increasing market concern about the value or liquidity of one or more types of Agency RMBS, might reduce the market value of our portfolio, which might cause our lenders to initiate margin calls. A margin call means that the lender requires us to pledge additional collateral to re-establish the ratio of the value of the collateral to the amount of the borrowing. The specific collateral value to borrowing ratio that would trigger a margin call is not set in the master repurchase agreements and not determined until we engage in a repurchase transaction under these agreements. Our fixed-rate Agency RMBS generally are more susceptible to margin calls as increases in interest rates tend to more negatively affect the market value of fixed-rate securities. If we are unable to satisfy margin calls, our lenders may foreclose on our collateral. The threat or occurrence of a margin call could force us to sell either directly or through a foreclosure our Agency RMBS under adverse market conditions. Because of the significant leverage we expect to have, we may incur substantial losses upon the threat or occurrence of a margin call, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders. Additionally, the liquidation of collateral may jeopardize our ability to qualify or maintain our qualification as a REIT, as we must comply with requirements regarding our assets and our sources of gross income. If we are compelled to liquidate our Agency RMBS, we may be unable to comply with these requirements, ultimately

jeopardizing our ability to qualify or maintain our qualification as a REIT. Our failure to qualify as a REIT or maintain our qualification would cause us to be subject to U.S. federal income tax (and any applicable state and local taxes) on all of our net taxable income.

Our use of repurchase agreements may give our lenders greater rights in the event that either we or any of our lenders file for bankruptcy, which may make it difficult for us to recover our collateral in the event of a bankruptcy filing.

Our borrowings under repurchase agreements may qualify for special treatment under the bankruptcy code, giving our lenders the ability to avoid the automatic stay provisions of the bankruptcy code and to take possession of and liquidate our collateral under the repurchase agreements without delay if we file for bankruptcy. Furthermore, the special treatment of repurchase agreements under the bankruptcy code may make it difficult for us to recover our pledged assets in the event that any of our lenders files for bankruptcy. Thus, the use of repurchase agreements exposes our pledged assets to risk in the event of a bankruptcy filing by either our lenders or us. In addition, if the lender is a broker or dealer subject to the Securities Investor Protection Act of 1970, or an insured depository institution subject to the Federal Deposit Insurance Act, our ability to exercise our rights to recover our investment under a repurchase agreement or to be compensated for any damages resulting from the lender's insolvency may be further limited by those statutes.

If we fail to maintain our relationship with AVM, L.P. or if we do not establish relationships with other repurchase agreement trading, clearing and administrative service providers, our business, financial condition and results of operations and our ability to pay distributions to our stockholders could be materially adversely affected.

We have engaged AVM, L.P. to provide us with certain repurchase agreement trading, clearing and administrative services. If we are unable to maintain our relationship with AVM, L.P. or we are unable to establish successful relationships with other repurchase agreement trading, clearing and administrative service providers, our business, financial condition and results of operations and our ability to pay distributions to our stockholders could be materially adversely affected.

If our lenders default on their obligations to resell the Agency RMBS back to us at the end of the repurchase transaction term, or if the value of the Agency RMBS has declined by the end of the repurchase transaction term or if we default on our obligations under the repurchase transaction, we will lose money on these transactions, which, in turn, may materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

When we engage in a repurchase transaction, we initially sell securities to the financial institution under one of our master repurchase agreements in exchange for cash, and our counterparty is obligated to resell the securities to us at the end of the term of the transaction, which is typically from 24 to 90 days but may be up to 364 days or more. The cash we receive when we initially sell the securities is less than the value of those securities, which is referred to as the haircut. Many financial institutions from which we may obtain repurchase agreement financing have increased their haircuts in the past and may do so again in the future. If these haircuts are increased, we will be required to post additional cash or securities as collateral for our Agency RMBS. If our counterparty defaults on its obligation to resell the securities to us, we would incur a loss on the transaction equal to the amount of the haircut (assuming there was no change in the value of the securities). We would also lose money on a repurchase transaction if the value of the underlying securities had declined as of the end of the transaction term, as we would have to repurchase the securities for their initial value but would receive securities worth less than that amount. Any losses we incur on our repurchase transactions could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

If we default on one of our obligations under a repurchase transaction, the counterparty can terminate the transaction and cease entering into any other repurchase transactions with us. In that case, we would likely need to establish a replacement repurchase facility with another financial institution in order to continue to leverage our portfolio and carry out our investment strategy. There is no assurance we would be able to establish a suitable replacement facility on acceptable terms or at all.

Hedging against interest rate exposure may not completely insulate us from interest rate risk and could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

To the extent consistent with qualifying and maintaining our qualification as a REIT, we may enter into interest rate cap or swap agreements or pursue other hedging strategies, including the purchase of puts, calls or other options and futures contracts in order to hedge the interest rate risk of our portfolio. In general, our hedging strategy depends on our view of our entire portfolio consisting of assets, liabilities and derivative instruments, in light of prevailing market conditions. We could misjudge the condition of our investment portfolio or the market. Our hedging activity will vary in scope based on the level and volatility of interest rates and principal prepayments, the type of Agency RMBS we hold and other changing market conditions. Hedging may fail to protect or could adversely affect us because, among other things:

- hedging can be expensive, particularly during periods of rising and volatile interest rates;
- available interest rate hedging may not correspond directly with the interest rate risk for which protection is sought;
  - the duration of the hedge may not match the duration of the related liability;
  - certain types of hedges may expose us to risk of loss beyond the fee paid to initiate the hedge;
- the amount of gross income that a REIT may earn from certain hedging transactions is limited by federal income tax provisions governing REITs;
- the credit quality of the counterparty on the hedge may be downgraded to such an extent that it impairs our ability to sell or assign our side of the hedging transaction; and
  - the counterparty in the hedging transaction may default on its obligation to pay.

There are no perfect hedging strategies, and interest rate hedging may fail to protect us from loss. Alternatively, we may fail to properly assess a risk to our investment portfolio or may fail to recognize a risk entirely, leaving us exposed to losses without the benefit of any offsetting hedging activities. The derivative financial instruments we select may not have the effect of reducing our interest rate risk. The nature and timing of hedging transactions may influence the effectiveness of these strategies. Poorly designed strategies or improperly executed transactions could actually increase our risk and losses. In addition, hedging activities could result in losses if the event against which we hedge does not occur.

Because of the foregoing risks, our hedging activity could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Our use of certain hedging techniques may expose us to counterparty risks.

If an interest rate swap counterparty cannot perform under the terms of the interest rate swap, we may not receive payments due under that swap, and thus, we may lose any unrealized gain associated with the interest rate swap. The hedged liability could cease to be hedged by the interest rate swap. Additionally, we may also risk the loss of any collateral we have pledged to secure our obligations under the interest rate swap if the counterparty becomes insolvent or files for bankruptcy. Similarly, if an interest rate cap counterparty fails to perform under the terms of the interest rate cap agreement, we may not receive payments due under that agreement that would off-set our interest expense and then could incur a loss for the then remaining fair market value of the interest rate cap.

Clearing facilities or exchanges upon which some of our hedging instruments are traded may increase margin requirements on our hedging instruments in the event of adverse economic developments.

In response to events having or expected to have adverse economic consequences or which create market uncertainty, clearing facilities or exchanges upon which some of our hedging instruments, such as Eurodollar futures contracts, are traded may require us to post additional collateral against our hedging instruments. In response to the U.S. approaching its debt ceiling without resolution and the government shutdown, the Chicago Mercantile Exchange announced on October 15, 2013 that it would increase margin requirements by 12% for all over-the-counter interest rate swap portfolios that its clearinghouse guaranteed. This increase was subsequently rolled back on October 17, 2013 upon the news that Congress passed legislation to temporarily suspend the debt ceiling and reopen the government, which allowed time for broader negotiations concerning budgetary issues. In the event that future adverse economic developments or market uncertainty result in increased margin requirements for our hedging instruments, it could materially adversely affect our liquidity position, business, financial condition and results of operations.

Our ability to achieve our investment objectives will depend on our ability to manage future growth effectively.

Our ability to achieve our investment objectives will depend on our ability to grow, which will depend, in turn, on our Manager's ability to identify and invest in securities that meet our investment criteria. Accomplishing this result on a cost-effective basis largely will be a function of our Manager's structuring and implementation of the investment process, its ability to provide competent, attentive and efficient services to us and our access to financing on acceptable terms. Our Manager has substantial responsibilities, and, in order to grow, needs to hire, train, supervise and manage new employees successfully. Any failure to manage our future growth effectively could have a material adverse effect on our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

We may change our investment strategy, investment guidelines and asset allocation without notice or stockholder consent, which may result in riskier investments. In addition, our charter provides that our Board of Directors may revoke or otherwise terminate our REIT election, without the approval of our stockholders.

Our Board of Directors has the authority to change our investment strategy or asset allocation at any time without notice to or consent from our stockholders. To the extent that our investment strategy changes in the future, we may make investments that are different from, and possibly riskier than, the investments described in this annual report. A change in our investment strategy may increase our exposure to interest rate and real estate market fluctuations. Furthermore, a change in our asset allocation could result in our allocating assets in a different manner than as described in this annual report.

In addition, our charter provides that our Board of Directors may revoke or otherwise terminate our REIT election, without the approval of our stockholders, if it determines that it is no longer in our best interests to qualify as a REIT. These changes could materially adversely affect our business, financial condition, results of operations, the market value of our common stock and our ability to make distributions to our stockholders.

Competition might prevent us from acquiring Agency RMBS at favorable yields, which could materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

We operate in a highly competitive market for investment opportunities. Our net income largely depends on our ability to acquire Agency RMBS at favorable spreads over our borrowing costs. In acquiring Agency RMBS, we compete with a variety of institutional investors, including other REITs, investment banking firms, savings and loan associations, banks, insurance companies, mutual funds, other lenders, other entities that purchase Agency RMBS, the Federal Reserve, other governmental entities and government-sponsored entities, many of which have greater financial, technical, marketing and other resources than we do. Several other REITs have recently raised, or are expected to raise, significant amounts of capital, and may have investment objectives that overlap with ours, which may create additional competition for investment opportunities. Some competitors may have a lower cost of funds and access to funding sources that may not be available to us, such as funding from the U.S. Government. Additionally, many of our competitors are not subject to REIT tax compliance or required to maintain an exemption from the Investment Company Act. In addition, some of our competitors may have higher risk tolerances or different risk assessments, which could allow them to consider a wider variety of investments. Furthermore, competition for investments in Agency RMBS may lead the price of such investments to increase, which may further limit our ability to generate desired returns. As a result, we may not be able to acquire sufficient Agency RMBS at favorable spreads over our borrowing costs, which would materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Actions of the U.S. Government for the purpose of stabilizing the financial markets may adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

The U.S. Government, through the Federal Reserve, the U.S. Treasury, the SEC, the Federal Housing Administration, or the FHA, the Federal Deposit Insurance Corporation, or the FDIC, and other governmental and regulatory bodies has taken or is considering taking various actions to address the recent financial crisis. For example, on July 21, 2010, President Obama signed into law the Dodd-Frank Wall Street Reform and Consumer Protection Act, or the Dodd-Frank Act. Many aspects of the Dodd-Frank Act are subject to rulemaking and will take effect over several years, making it difficult to anticipate the overall financial impact on us and, more generally, the financial services and mortgage industries. Additionally, we cannot predict whether there will be additional proposed laws or reforms that would affect us, whether or when such changes may be adopted, how such changes may be interpreted and enforced or how such changes may affect us. However, the costs of complying with any additional laws or regulations could have a material adverse effect on our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

In addition to the foregoing, the U.S. Congress and/or various state and local legislatures may enact additional legislation or regulatory action designed to address the current economic crisis or for other purposes that could have a material adverse effect on our ability to execute our business strategies. To the extent the market does not respond favorably to these initiatives or they do not function as intended, our business, financial condition and results of operations and our ability to pay distributions to our stockholders could be materially adversely affected.

We are an “emerging growth company,” and we cannot be certain if the reduced disclosure requirements applicable to emerging growth companies will make our common stock less attractive to investors.

We are an “emerging growth company,” as defined in the Jumpstart Our Business Startups Act of 2012, or the JOBS Act, and as such, we are not required to comply with the auditor attestation requirements of Section 404 of the Sarbanes-Oxley Act of 2002, or the Sarbanes-Oxley Act, we have reduced disclosure obligations regarding executive compensation in our periodic reports and proxy statements, and we are exempt from the requirements of holding a nonbinding advisory vote on executive compensation and stockholder approval of any golden parachute payments not previously approved. Although we are an emerging growth company under the JOBS Act, we have elected to opt out of the extended transition period for complying with new or revised accounting standards, and such election is irrevocable. We cannot predict if investors will find our shares of common stock less attractive because we may rely on these provisions. If some investors find our shares of common stock less attractive as a result, there may be a less active trading market for our shares and our share price may be more volatile.

Our obligation to comply with the requirements of the Sarbanes-Oxley Act of 2002 will increase.

As long as we remain an emerging growth company, as that term is defined in the JOBS Act, we will be permitted to gradually comply with certain of the on-going reporting and disclosure obligations of public companies pursuant to the Sarbanes-Oxley Act. We cannot be certain if the reduced disclosure requirements applicable to emerging growth companies will make our ordinary shares less attractive to investors.

Management is required to deliver a report that assesses the effectiveness of our internal controls over financial reporting pursuant to Section 302 of the Sarbanes-Oxley Act. Section 404 of the Sarbanes-Oxley Act may require our auditors to deliver an attestation report on the effectiveness of our internal controls over financial reporting in conjunction with their opinion on our audited financial statements in future years. Substantial work on our part is required to implement appropriate processes, document the system of internal control over key processes, assess their design, remediate any deficiencies identified and test their operation. This process is expected to be both costly and challenging. We cannot give any assurances that material weaknesses will not be identified in the future in connection with our compliance with the provisions of Section 302 and 404 of the Sarbanes-Oxley Act. The existence of any material weakness described above would preclude a conclusion by management and our independent auditors that we maintained effective internal control over financial reporting. Our management may be required to devote significant time and expense to remediate any material weaknesses that may be discovered and may not be able to remediate any material weakness in a timely manner. The existence of any material weakness in our internal control over financial reporting could also result in errors in our financial statements that could require us to restate our financial statements, cause us to fail to meet our reporting obligations and cause investors to lose confidence in our reported financial information, all of which could lead to a decline in the trading price of our common stock.

Terrorist attacks and other acts of violence or war may materially adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

We cannot assure you that there will not be further terrorist attacks against the United States or U.S. businesses. These attacks or armed conflicts may directly impact the property underlying our Agency RMBS or the securities markets in general. Losses resulting from these types of events are uninsurable. More generally, any of these events could cause consumer confidence and spending to decrease or result in increased volatility in the United States and worldwide financial markets and economies. They also could result in economic uncertainty in the United States or abroad. Adverse economic conditions could harm the value of the property underlying our Agency RMBS or the securities markets in general, which could materially adversely affect our business, financial condition and results of operations

and our ability to pay distributions to our stockholders.

We are highly dependent on communications and information systems operated by third parties, and systems failures could significantly disrupt our business, which may, in turn, adversely affect our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Our business is highly dependent on communications and information systems that allow us to monitor, value, buy, sell, finance and hedge our investments. These systems are operated by third parties and, as a result, we have limited ability to ensure their continued operation. In the event of a systems failure or interruption, we will have limited ability to affect the timing and success of systems restoration. Any failure or interruption of our systems could cause delays or other problems in our securities trading activities, including Agency RMBS trading activities, which could have a material adverse effect on our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

If we issue debt securities, our operations may be restricted and we will be exposed to additional risk.

If we decide to issue debt securities in the future, it is likely that such securities will be governed by an indenture or other instrument containing covenants restricting our operating flexibility. Additionally, any convertible or exchangeable securities that we issue in the future may have rights, preferences and privileges more favorable than those of our common stock. We, and indirectly our stockholders, will bear the cost of issuing and servicing such securities. Holders of debt securities may be granted specific rights, including but not limited to, the right to hold a perfected security interest in certain of our assets, the right to accelerate payments due under the indenture, rights to restrict dividend payments, and rights to approve the sale of assets. Such additional restrictive covenants and operating restrictions could have a material adverse effect on our business, financial condition and results of operations and our ability to pay distributions to our stockholders.

Adoption of the Basel III standards and other proposed supplementary regulatory standards may negatively impact our access to financing or affect the terms of our future financing arrangements.

In response to various financial crises and the volatility of financial markets, the Basel Committee on Banking Supervision adopted the Basel III standards several years ago. The final package of Basel III reforms was approved by the G20 leaders in November 2010. In January 2013, the Basel Committee agreed to delay implementation of the Basel III standards and expanded the scope of assets permitted to be included in a bank's liquidity measurement.

U.S. regulators have elected to implement substantially all of the Basel III standards. Financial institutions will have until 2019 to fully comply with the Basel III standards, which could cause an increase in capital requirements for, and could place constraints on, the financial institutions from which we borrow.

Shortly after approving the Basel III standards, U.S. regulators also issued a notice of proposed rule-making calling for enhanced supplementary leverage ratio standards, which would impose capital requirements more stringent than those of the Basel III standards for the most systematically significant banking organizations in the U.S. The enhanced standards are currently subject to public comment, and there can be no assurance that they will be adopted or, if adopted, that they will resemble the current proposal. Adoption and implementation of the Basel III standards and the supplemental regulatory standards proposed by U.S. regulators may negatively impact our access to financing or affect the terms of our future financing arrangements.

### Risks Related to Conflicts of Interest in Our Relationship with Our Manager and Bimini

The management agreement with our Manager was not negotiated on an arm's-length basis and the terms, including fees payable and our inability to terminate, or our election not to renew, the management agreement based on our Manager's poor performance without paying our Manager a significant termination fee, except for a termination of the Manager with cause, may not be as favorable to us as if it were negotiated with an unaffiliated third party.

The management agreement with our Manager was negotiated between related parties, and we did not have the benefit of arm's-length negotiations of the type normally conducted with an unaffiliated third party. The terms of the management agreement with our Manager, including fees payable and our inability to terminate, or our election not to renew, the management agreement based on our Manager's poor performance without paying our Manager a significant termination fee, except for a termination of the Manager with cause, may not reflect the terms we may have received if it was negotiated with an unrelated third party. In addition, as a result of the relationship with our Manager, we may choose not to enforce, or to enforce less vigorously, our rights under the management agreement because of our desire to maintain our ongoing relationship with our Manager.

We have no employees, and our Manager is responsible for making all of our investment decisions. None of our or our Manager's officers are required to devote any specific amount of time to our business, and each of them may provide their services to Bimini, which could result in conflicts of interest.

Our Manager is responsible for making all of our investments. We do not have any employees, and we are completely reliant on our Manager to provide us with investment advisory services. Each of our and our Manager's officers is an employee of Bimini and none of them will devote their time to us exclusively. Each of Messrs. Cauley and Haas, who will be the initial members of our Manager's investment committee, is an officer of Bimini and has significant responsibilities to Bimini. Due to the fact that each of our officers is responsible for providing services to Bimini, they may not devote sufficient time to the management of our business operations. At times when there are turbulent conditions in the mortgage markets or distress in the credit markets or other times when we will need focused support and assistance from our executive officers and our Manager, Bimini and its affiliates will likewise require greater focus and attention from them. In such situations, we may not receive the level of support and assistance that we otherwise would likely have received if we were internally managed or if such executives were not otherwise committed to provide support to Bimini.

Our Board of Directors has adopted investment guidelines that require that any investment transaction between us and Bimini or any affiliate of Bimini receive the prior approval of a majority of our independent directors. However, this policy will not eliminate the conflicts of interest that our officers will face in making investment decisions on behalf of Bimini and us. Further, we do not have any agreement or understanding with Bimini that would give us any priority over Bimini or any of its affiliates. Accordingly, we may compete for access to the benefits that we expect our relationship with our Manager and Bimini to provide.

We are completely dependent upon our Manager and certain key personnel of Bimini who provide services to us through the management agreement, and we may not find suitable replacements for our Manager and these personnel if the management agreement is terminated or such key personnel are no longer available to us.

We are completely dependent on our Manager to conduct our operations pursuant to the management agreement. Because we do not have any employees or separate facilities, we are reliant on our Manager to provide us with the personnel, services and resources necessary to carry out our day-to-day operations. Our management agreement does not require our Manager to dedicate specific personnel to our operations or a specific amount of time to our business.

Additionally, because we are affiliated with Bimini, we may be negatively impacted by an event or factors, including ongoing and potential legal proceedings against Bimini and its subsidiaries, that negatively impacts or could negatively impact Bimini's business or financial condition.

After the initial term of the management agreement, which expires on February 20, 2016, or upon the expiration of any automatic renewal term, our Manager may elect not to renew the management agreement without cause, and without penalty, on 180-days' prior written notice to us. If we elect not to renew the management agreement without cause, we would have to pay a termination fee equal to three times the average annual management fee earned by our Manager during the prior 24-month period immediately preceding the most recently completed calendar quarter prior to the effective date of termination. During the term of the management agreement and for two years after its expiration or termination, we may not, without the consent of our Manager, employ any employee of the Manager or any of its affiliates or any person who has been employed by our Manager or any of its affiliates at any time within the two-year period immediately preceding the date on which the person commences employment with us. We do not have retention agreements with any of our officers. We believe that the successful implementation of our investment and financing strategies depends to a significant extent upon the experience of Bimini's executive officers. None of these individuals' continued service is guaranteed. If the management agreement is terminated or these individuals leave Bimini, we may be unable to execute our business plan.

Legal proceedings involving Bimini and certain of its subsidiaries have adversely affected Bimini, may materially adversely affect Bimini's and our Manager's ability to effectively manage our business and could materially adversely affect our reputation, business, operations, financial condition and results of operations and our ability to pay distributions to our stockholders.

Bimini and its subsidiaries are currently subject to certain ongoing legal proceedings and could be subject to further legal proceedings in the future. Most of these legal proceedings arise out of the mortgage-related operations of Bimini's mortgage origination subsidiary that discontinued operations in 2007. In the past, Bimini and certain of its subsidiaries have been subject to similar actions, including proceedings alleging violations of the federal securities laws and for breach of duty arising from the sale of certain mortgage-related securities, which have now been satisfactorily resolved. Bimini and its subsidiaries could be subject to similar actions in the future.

We are externally managed and advised by our Manager pursuant to the terms of a Management Agreement. Because our officers are also officers of Bimini and our Manager, any legal proceedings or regulatory inquiries involving Bimini or our Manager, whether meritorious or not, may divert the time and attention of our Manager and certain of its key personnel from us and our investment strategy and may negatively affect Bimini's business, operations and financial condition. In addition, due to our relationship with Bimini and our Manager, such events could result in a material adverse effect on our reputation, business, financial condition and results of operations and our ability to pay distributions to our stockholders. Furthermore, if these legal proceedings were to result in a bankruptcy of Bimini or our Manager, we would not be able to terminate the Management Agreement until 30 days after we provide written notice of termination to our Manager and could experience difficulty in finding another manager or hiring personnel to conduct our business. Alternatively, a bankruptcy court could prevent us from exercising such termination rights, regardless of the provisions of the management agreement.

We, Bimini and other accounts managed by our Manager may compete for opportunities to acquire assets, which are allocated in accordance with the Investment Allocation Agreement by and among Bimini, our Manager and us.

From time to time Bimini may seek to purchase for itself the same or similar assets that our Manager seeks to purchase for us, or our Manager may seek to purchase the same or similar assets for us as it does for other accounts that may be managed by our Manager in the future. In such an instance, our Manager has no duty to allocate such opportunities in a manner that preferentially favors us. Bimini and our Manager make available to us opportunities to acquire assets that they determine, in their reasonable and good faith judgment, based on our objectives, policies and strategies, and other relevant factors, are appropriate for us in accordance with the Investment Allocation Agreement.

Because many of our targeted assets are typically available only in specified quantities and because many of our targeted assets are also targeted assets for Bimini and may be targeted assets for other accounts our Manager may manage in the future, neither Bimini nor our Manager may be able to buy as much of any given asset as required to satisfy the needs of Bimini, us and any other account our Manager may manage in the future. In these cases, the Investment Allocation Agreement will require the allocation of such assets to multiple accounts in proportion to their needs and available capital. The Investment Allocation Agreement will permit departure from such proportional allocation when (i) allocating purchases of whole-pool Agency RMBS, because those securities cannot be divided into multiple parts to be allocated among various accounts, and (ii) such allocation would result in an inefficiently small amount of the security being purchased for an account. In that case, the Investment Allocation Agreement allows for a protocol of allocating assets so that, on an overall basis, each account is treated equitably.

There are conflicts of interest in our relationships with our Manager and Bimini, which could result in decisions that are not in the best interests of our stockholders.

We are subject to conflicts of interest arising out of our relationships with Bimini and our Manager. All of our executive officers are employees of Bimini. As a result, our officers may have conflicts between their duties to us and their duties to Bimini or our Manager.

We may acquire or sell assets in which Bimini or its affiliates have or may have an interest. Similarly, Bimini or its affiliates may acquire or sell assets in which we have or may have an interest. Although such acquisitions or dispositions may present conflicts of interest, we nonetheless may pursue and consummate such transactions. Additionally, we may engage in transactions directly with Bimini or its affiliates, including the purchase and sale of all or a portion of a portfolio asset.

Acquisitions made for entities with similar objectives may be different from those made on our behalf. Bimini may have economic interests in or other relationships with others whose obligations or securities we may acquire. In particular, such persons may make and/or hold an investment in securities that we acquire that may be pari passu, senior or junior in ranking to our interest in the securities or in which partners, security holders, officers, directors, agents or employees of such persons serve on the board of directors or otherwise have ongoing relationships. Each of such ownership and other relationships may result in securities laws restrictions on transactions in such securities and otherwise create conflicts of interest. In such instances, our Manager may, in its sole discretion, make recommendations and decisions regarding such securities for other entities that may be the same as or different from those made for us with respect to such securities and may take actions (or omit to take actions) in the context of these other economic interests or relationships that may have consequences adverse to our interests.

The officers of Bimini and our Manager devote as much time to us as our Manager deems appropriate. However, these officers may have conflicts in allocating their time and services among us, Bimini and our Manager. During turbulent conditions in the mortgage industry, distress in the credit markets or other times when we will need focused support and assistance from our Manager's officers and Bimini's employees, Bimini and other entities for which our Manager may serve as a manager in the future will likewise require greater focus and attention, placing our Manager's and Bimini's resources in high demand. In such situations, we may not receive the necessary support and assistance we require or would otherwise receive if we were internally managed.

We, directly or through Bimini or our Manager, may obtain confidential information about the companies or securities in which we have invested or may invest. If we possess confidential information about such companies or securities, there may be restrictions on our ability to dispose of, increase the amount of, or otherwise take action with respect to the securities of such companies. Our Manager's management of other accounts could create a conflict of interest to

the extent our Manager or Bimini is aware of material non-public information concerning potential investment decisions. We have implemented compliance procedures and practices designed to ensure that investment decisions are not made while in possession of material non-public information. We cannot assure you, however, that these procedures and practices will be effective. In addition, this conflict and these procedures and practices may limit the freedom of our Manager to make potentially profitable investments, which could have an adverse effect on our operations. These limitations imposed by access to confidential information could therefore materially adversely affect our business, financial condition and results of operations and our ability to make distributions to our stockholders.
