The name and parent company of any Financing Conduit created during the quarter; the amount invested in any Financing Conduit during the quarter and the amount and terms of any securities issued by any Financing Conduit during the quarter, which shall also separately show the amount of all securities issued by such subsidiaries during the Authorization Period.

None.

Item 15

If any subsidiaries are Variable Interest Entities ("VIEs") as that term is used in FASB Interpretation 46R, Consolidation of Variable Interest Entities, provide a description of any financing transactions conducted during the reporting period that were used to fund such VIEs;

FASB Interpretation No. 46, "*Consolidation of Variable Interest Entities*" (Revised December 2003) ("FIN 46R"), became effective January 1, 2004 for those entities considered to be special purpose entities, and March 31, 2004 for others. Under the model for consolidation promulgated by FIN 46R, a PPA may qualify as a variable interest if its terms expose the purchaser to variability in supply or operating costs and the contract is for a significant portion of the entity's generating capacity. PNM Resources evaluated its PPAs under the provisions of FIN 46R and determined that one purchase contract entered into prior to December 31, 2003 qualifies as a variable interest. PNM Resources was unable to obtain the necessary information needed to determine if PNM Resources was the primary beneficiary and if consolidation was needed despite efforts including a formal written request to the operator of the entity supplying power under the PPA. The operator cited legal and competitive reasons for refusing to provide the information.

This variable interest PPA is a contract to purchase 132 MW of capacity and energy expiring in June 2020. The contract contains a fixed capacity charge, a fixed O&M charge, and a variable energy charge that subjects PNM to the changes in the cost of fuel and O&M. For the three months ended September 30, 2005 and 2004, the capacity and O&M charge was \$1.8 million and \$1.8 million, respectively, and the energy charges were \$0.2 million and \$0.4 million, respectively. For the nine months ended September 30, 2005 and 2004, the capacity and O&M charge was \$5.1 million and \$4.4 million, respectively, and the energy charges were \$0.8 million and \$0.8 million, respectively. The contract is for the full output of a specific gas generating plant and is currently accounted for as an operating lease by PNM. Under this contract PNM is exposed to changes in the costs to produce energy and operate the plant.

PNM Resources also has interests in other variable interest entities created before January 31, 2003, for which PNM Resources is not the primary beneficiary. These arrangements include PNM Resources' investment in a limited partnership and certain PNM leases. The aggregate maximum loss exposure at September 30, 2005 that PNM Resources could be required to record in its income statement as a result of these arrangements totals approximately \$5.3 million. The creditors of these variable interest entities do not have recourse to the general credit of PNM Resources in excess of the aggregate maximum loss exposure.

Item 16

If any financing proceeds are used for VIEs, a description of the accounting for such transaction under FASB Interpretation 46R.

See the response to Item 15 above.

Item 17
