MICROVISION, INC.
Notes to Consolidated Financial Statements
March 31, 2008
(Unaudited)

1. MANAGEMENT'S STATEMENT AND PRINCIPLES OF CONSOLIDATION

Management's Statement

The Consolidated Balance Sheet as of March 31, 2008, the Consolidated Statements of Operations, Comprehensive Loss and Cash Flows for the three months ended March 31, 2008 and 2007 have been prepared by Microvision, Inc. (the "Company" or "Microvision") and have not been audited. In the opinion of management, all adjustments necessary to state fairly the financial position at March 31, 2008 and the results of operations, comprehensive loss and cash flows for all periods presented have been made and consist of normal recurring adjustments. Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted pursuant to the rules of the SEC. You should read these condensed financial statements in conjunction with the financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2007. The results of operations for the three months ended March 31, 2008 are not necessarily indicative of the operating results that may be attained for the entire fiscal year.

At March 31, 2008, Microvision had \$30.1 million in cash, cash equivalents and investment securities, available-for-sale. Based on its current operating plan, the Company believes that it has sufficient cash to fund operations through at least March 2009. Microvision will require additional cash to fund its operating plan past that time. There can be no assurance that additional cash will be available or that, if available, it will be available on terms acceptable to Microvision on a timely basis. If adequate funds are not available to satisfy either short-term or long-term capital requirements, Microvision will be required to limit its operations substantially. This limitation of operations may include reductions in staff, operating costs and capital expenditures.

2. NET LOSS PER SHARE

Basic net loss per share is calculated on the basis of the weighted-average number of common shares outstanding during the reporting periods. Diluted net loss per share is calculated on the basis of the weighted-average number of common shares outstanding and taking into account the dilutive effect of all potential common stock equivalents outstanding. Potentially dilutive common stock equivalents primarily consist of convertible debt, convertible preferred stock, warrants and employee stock options. Diluted net loss per share for the three months ended March 31, 2008 and 2007 is equal to basic net loss per share because the effect of all potential common stock outstanding during the periods, including convertible debt, convertible preferred stock, options and warrants is anti-dilutive. The components of basic and diluted net loss per share were as follows (in thousands, except loss per share data):

	Three Months Ended March 31,	
	2008	2007
Numerator:		
Net loss - basic and diluted	\$ (5,038)	\$ (6,8

Edgar Filing: MICROVISION INC - Form 10-Q

Denominator:

Weighted-average common shares outstanding - basic and diluted

56,730

43,0

Net loss per share - basic and diluted

\$ (0.09) \$ (0.

On March 31, 2008 and 2007, the Company excluded the following convertible securities from diluted net loss per share as the effect of including them would have been anti-dilutive: publicly traded warrants convertible into 0 and 12,363,000 shares of common stock, options and private warrants convertible into a total of 10,940,000 and 10,436,000 shares of common stock and 125,000 and 0 shares of nonvested equity shares, respectively.

3. INVESTMENT SECURITIES, AVAILABLE-FOR-SALE AND FAIR VALUE MEASUREMENTS

The Company accounts for investment securities, available-for-sale in accordance with the provisions of Statement of Financial Accounting Standards No. 115, Accounting for Certain Investments in Debt and Equity Securities (FAS 115). FAS 115 addresses the accounting and reporting for investments in equity securities that have readily determinable fair values and for all investments in debt securities. The Company's investment securities, available-for-sale are comprised of commercial paper, U.S. government and commercial debt securities and auction rate securities. The Company has classified its entire investment portfolio as available-for-sale. Available-for-sale securities are stated at fair value with unrealized gains and losses included in other comprehensive income (loss). Dividend and interest income are recognized when earned. Realized gains and losses are presented separately on the income statement. The cost of securities sold is based on the specific identification method.

At March 31, 2008, \$4.3 million of the Company's marketable securities portfolio was invested in AAA rated investments in auction-rate debt securities. Auction-rate securities are long-term variable rate bonds tied to short-term interest rates. After the initial issuance of the securities, the interest rate on the securities is reset periodically, at intervals established at the time of issuance (generally every seven, twenty-eight, or thirty-five days), based on market demand for a reset period. Auction-rate securities are bought and sold in the marketplace through a competitive bidding process often referred to as a "Dutch Auction". If there is insufficient interest in the securities at the time of an auction, the auction may not be completed and the rates may be reset to predetermined "penalty" or "maximum" rates. Following such a failed auction, the holder would not be able to access its funds that are invested in the corresponding auction-rate securities until a future auction of these investments is successful or new buyers express interest in purchasing these securities in between auctions.

Given the current negative liquidity conditions in the global credit markets, auctions for \$4.3 million of original par value of the Company's auction-rate securities have failed rendering these securities temporarily illiquid through the normal auction process. At the time of its initial investment and through the date of filing this report, all of the Company's auction-rate securities in which it invests remain AAA rated, collateralized and there have been no declines in the credit ratings of the issuers. Subsequent to March 31, 2008, the Company successfully liquidated into cash equivalents, \$1.1 million of the \$4.3 million of auction-rate securities held at March 31, 2008. The \$1.1 million equaled the original purchase value. The collateral for the Company's student loan auction-rate securities ("SLARS") are the student loans and collections thereon. The collateral for the municipal auction-rate securities is the user fees collected on the public works project that was funded. In addition, the underlying loans in the SLARS are guaranteed by the Federal Family Education Loan Program and other federal and state student loan guarantee programs. AMBAC is the insurer on a majority of the auction-rate securities that the Company holds. As of March 31, 2008, AMBAC was rated AAA by Moody's and Standard and Poor's and AA by Fitch Ratings. Although these insurers are highly rated, they are reported to be experiencing financial difficulty, which could negatively affect their ratings and thus the ratings of the auction-rate securities that the Company holds. If the issuers are unable to successfully clear future auctions or if the insurer's credit rating deteriorates and the deterioration is deemed to be other-than-temporary, the Company would be required to adjust the carrying value of the auction-rate securities through a realized loss on its

investments to the consolidated statement of operations. Any of these events could affect the Company's results of operations and financial condition. In the event the Company needs to access these funds, it could be required to sell these securities at an amount below its original purchase value. However, based on the Company's ability to access its cash and cash equivalents and its other liquid investments, totaling \$25.8 million at March 31, 2008, it does not expect to be required to sell these securities at a loss. If the Company were required to sell the securities at a loss, the Company believes the loss would be immaterial to its results of operations, comprehensive loss and cash flows. The auction-rate securities remain AAA rated, collateralized and there have been no declines in the credit ratings of the issuers. In addition, all of the auction-rate securities that the Company has liquidated have been sold at par value. Therefore, the Company believes that it will be able to liquidate its remaining auction rate securities within one year and has classified them as short-term.

In September 2006, the FASB issued Statement of Financial Accounting Standards 157, Fair Value Measurements ("FAS 157"). FAS 157 defines fair value, establishes a framework and gives guidance regarding the methods used for measuring fair value, and expands disclosures about fair value measurements. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods of those fiscal years. The Company adopted FAS 157 effective January 1, 2008. The adoption of FAS 157 for financial assets and liabilities did not have a material impact on the Company's consolidated financial position, consolidated results of operations or consolidated cash flows.

FAS 157 defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. FAS 157 also establishes a three level fair value inputs hierarchy which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The hierarchy is shown below:

Level 1 - Observable inputs such as quoted prices in active markets for identical assets or liabilities,

Level 2 - Observable inputs, other than Level 1 prices, such as quoted prices for similar assets or liabilities, quoted prices in markets that are not sufficiently active to qualify as level 1, other observable inputs, or inputs that can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3 - Unobservable inputs in which there is little or no market data, which requires the company to develop its own assumptions which are significant to the measurement of the fair values of the assets or liabilities.

When measuring fair value, FAS 157 requires an entity to maximize its use of observable inputs and market data, when available at reasonable cost, and minimize its use of unobservable inputs. It must also utilize market data and assumptions it believes market participants would use in measuring the fair value of the asset or liability, including assumptions about risks, the risks inherent in the inputs and the valuation techniques.

The market approach is used to measure fair values of debt and equity securities and the income approach for derivatives. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities. The income approach uses valuation techniques to convert future amounts to a single present amount.

The Company utilizes valuations reported by a major valuation services company ("Service") for its debt securities. The valuations are reviewed for reasonableness before being accepted for financial reporting. The Company has reviewed the inputs and methodologies used by the Service as a basis for its accounting and disclosures in accordance with FAS 157.

Assets and liabilities measured at fair value on a recurring basis in accordance with FAS 157 are summarized below:

Edgar Filing: MICROVISION INC - Form 10-Q

	Level 1	Level 2	Level 3	Total
	-----	-----	-----	-----
Assets				
Corporate debt and equity securities	\$ 71,000	\$ 6,589,000	\$ --	\$ 6,660,000
U.S. government and agency securities	4,540,000	--	--	4,540,000
Auction rate securities	--	4,300,000	--	4,300,000
Warrants in Lumera	--	66,000	--	66,000
	-----	-----	-----	-----
	\$ 4,611,000	\$ 10,955,000	\$ --	\$ 15,566,000
	=====	=====	=====	=====
Liabilities				
Liability associated with common stock warrants		\$ 921,000		\$ 921,000
		=====		=====

The Company's investments available-for-sale and liability associated with common stock warrants are classified within Level 1 or Level 2 of the fair value hierarchy because they are valued using quoted market prices, broker or dealer quotations, or alternative pricing sources with sufficient levels of price transparency. The types of instruments valued based on quoted market prices in active markets include U.S. government and agency securities and equity investments. Such instruments are classified within Level 1 of the fair value hierarchy. The types of instruments valued based on other observable inputs include investment-grade corporate bonds, auction rate securities, Lumera warrants, and liability associated with common stock warrants. Such instruments are classified within Level 2 of the fair value hierarchy. Financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement.

The principal markets for the debt securities are dealer markets which have a relatively high level of price transparency. The principal market for Lumera common stock is NASDAQ. The market participants for debt securities are typically large money center banks and regional banks, brokers, dealers, pension funds, and companies with debt investment portfolios.

The Company's investments available-for-sale, warrants in Lumera, and liability associated with common stock warrants are summarized below as of March 31, 2008 and December 31, 2007:

	Cost/ Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value	Classified Investment Securities Available For Sale
	-----	-----	-----	-----	-----
As of March 31, 2008:					
Assets					
Corporate debt and equity securities	6,619,000	41,000	--	6,660,000	6,660,000
U.S. government and agency securities	4,492,000	48,000	--	4,540,000	4,540,000
Auction rate securities	4,300,000	--	--	4,300,000	4,300,000
Warrants in Lumera	--	--	--	66,000	66,000
	-----	-----	-----	-----	-----
	\$15,411,000	\$ 89,000	\$ --	\$15,566,000	\$15,566,000
	=====	=====	=====	=====	=====
Liabilities					
Liability associated with common stock warrants				\$ 921,000	\$ 921,000
				=====	=====

	Cost/ Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value	Investments Available-for-Sale
As of December 31, 2007:					
Assets					
Corporate debt and equity securities	9,074,000	54,000	(5,000)	9,123,000	9,123,000
U.S. government and agency securities	4,486,000	3,000	(1,000)	4,488,000	4,488,000
Auction rate securities	8,800,000	--	--	8,800,000	8,800,000
Warrants in Lumera	--	--	--	130,000	130,000
	\$22,360,000	\$ 57,000	\$ (6,000)	\$22,541,000	\$22,541,000
Liabilities					
Liability associated with common stock warrants				\$ 2,657,000	

Unrealized gains or losses on investments available-for-sale are recorded in accumulated other comprehensive loss (income) at each measurement date. Changes in the fair values of the warrants in Lumera and the liability associated with common stock warrants are realized in the period of remeasurement and recorded in Gain (loss) on derivative instruments, net in the Consolidated Statement of Operations.

As of March 31, 2008, all debt and equity securities subject to FAS157 have been in continuous unrealized gain or loss positions.

As of March 31, 2008, the investments held by the Company are investment grade debt securities, publicly traded Lumera common stock (NASDAQ: LMRA) and Lumera warrants. The unrealized losses on our investments in debt securities were due primarily to changes in interest rates and credit market. The unrealized and realized gains and losses associated investments in Lumera were primarily due to its stock price changes. Because we have the ability to hold investments with unrealized losses until a recovery of fair value, we do not consider these investments to be other-than-temporarily impaired as of March 31, 2008.

The realized gains and losses associated with the liability associated with common stock warrants were primarily due to changes in the Microvision stock price and decreasing terms to expiration.

4. INVENTORY

Inventory at March 31, 2008 and December 31, 2007 consisted of the following:

	March 31, 2008	December 2007
Raw materials	\$ 29,000	\$ 122,000
Work-in-process	13,000	10,000
Finished goods	1,294,000	629,000
	\$ 1,336,000	\$ 761,000

The inventory at March 31, 2008 and December 31, 2007 consisted of raw materials, work-in-process, and finished goods for ROV and Flic, the Company's hand-held bar code scanners. Inventory is stated at the lower of cost or market, with cost determined on a weighted-average basis. Management periodically assesses the need to provide for obsolescence of inventory and adjusts the carrying value of inventory to its net realizable value when required. In addition, Microvision reduces the value of its inventory to its estimated scrap value when management determines that it is not probable that the inventory will be consumed through normal production during the next twelve months.

5. SHARE-BASED COMPENSATION

The Company accounts for stock-based employee compensation arrangements in accordance with the provisions of Statement of Financial Accounting Standards No. 123, as revised December 2004 ("FAS 123(R)"). The Company accounts for equity instruments issued to non-employees in accordance with the provisions of Emerging Issues Task Force Issue No. 96-18 and FAS No. 123. The following table shows the amount of stock-based employee compensation expense included in the Consolidated Statement of Operations:

	Three Months Ended March 31,	
	2008	2007
Cost of contract revenue	50,000	23,000
Cost of product revenue	11,000	8,000
Research and development expense	281,000	82,000
Sales, marketing, general and administrative expense	724,000	178,000
Share-based employee compensation cost charged against income	\$ 1,066,000	\$ 291,000

Options Activity and Positions

The following table summarizes shares, weighted average exercise price, weighted average remaining contractual term and aggregate intrinsic value of options outstanding and options exercisable as of March 31, 2008:

Options	Shares	Weighted Average Exercise Price	Weighted Average Remaining Contractual Term (years)	Aggregate Intrinsic Value
Outstanding as of March 31, 2008	7,258,000	\$ 3.96	7.5	\$ 519,000
Exercisable as of March 31, 2008	2,783,000	\$ 5.17	5.7	\$ 186,000

As of March 31, 2008, the Company's unamortized share-based compensation was \$6,014,000. The Company plans to amortize this share-based compensation cost over the next 2.8 years.

As of March 31, 2008, the Company's unamortized nonvested equity share-based compensation was \$237,000. The Company plans to amortize this nonvested equity share-based compensation cost over the next 3.0 years.

6. LONG-TERM NOTES

Tenant Improvement Loan Agreement

In February 2006, the Company entered into a loan agreement with the lessor of the Company's corporate headquarters to finance \$536,000 in tenant improvements. The loan carries a fixed interest rate of 9% per annum, is repayable over the initial term of the lease, which expires in 2013, and is secured by a letter of credit. The balance of the loan, including interest added to principal, was \$442,000 at March 31, 2008.

7. RECEIVABLES FROM RELATED PARTIES

In 2000, the Board of Directors authorized the Company to provide unsecured lines of credit to each of the Company's three senior officers. The limit of the line of credit was three times the executives' base salary less any amounts outstanding under the Executive Option Exercise Note Plan. In 2002 and 2001, the Board of Directors authorized additions totaling \$700,000, to the limit for one senior officer. The lines of credit carry interest rates of 5.4% to 6.2%. The lines of credit must be repaid within one year of the senior officer's termination or within thirty days of demand by the Company in the event of a plan termination, provided that in the event of such a demand the senior officer may elect to deliver a promissory note with a one-year term in lieu of payment.

In 2002, the Company determined that certain of its senior officers may have insufficient net worth and short-term earnings potential to repay loans outstanding under the Company's lines of credit. In 2003 and 2002, the Company recorded allowances for doubtful accounts for receivables from senior officers totaling \$900,000.

In January 2006, two senior officers with outstanding loans from the Company left the Company. Because the lines of credit were not fully secured and collection was uncertain, the Company increased the allowance by \$1,031,000 in December 2005. In accordance with the terms, the loans were due in January 2007. Neither of the officers has repaid their loans. One of the officers pledged 50,000 shares of Lumera common stock as collateral for the loans. In May 2007, the Company foreclosed on the collateral and sold the shares for net proceeds of \$227,000. The Company is pursuing collection of the remaining outstanding balances. A third executive with outstanding loans from the Company left the Company in August 2007 and his loans will be due in August 2008. As a result of a review of the financial position of the former executives and the potential difficulty in collecting loans from former employees, the Company recorded additional allowances for doubtful accounts for the receivables from senior officers of \$23,000 during 2007. As of March 31, 2008 and December 31, 2007, the total amount outstanding under the lines of credit was \$2,496,000. As of March 31, 2008 and December 31, 2007, the allowance for receivables from related parties was \$2,496,000.

8. ACCOUNTING FOR LUMERA WARRANTS

The Company owns a warrant to purchase 170,500 shares of Lumera common stock and records the warrant at fair value in "Other current assets". On the original transaction date, the warrant was valued using the Black-Scholes option-pricing model with the following assumptions: expected volatility of 83%; expected dividend yield of 0%; risk free interest rate of 4.6%; and contractual life of 5.1 years.

Changes in the fair value of the warrants are recorded in the statement of operations each period. At March 31, 2008, the warrant was revalued using the Black-Scholes option-pricing model with the following assumptions; expected volatility of 83%; expected dividend yield of 0%; risk free interest rate of 1.8%; and contractual life of 3.0 years. The fair value of the warrant decreased to \$66,000 from \$130,000 at December 31, 2007 and the change in value for the three months ended March 31, 2008 of \$64,000 was recorded as a non-operating loss and is included in "Gain (loss) on derivative instruments, net" in the consolidated statement of operations.

9. COMMITMENTS AND CONTINGENCIES

Litigation

The Company is subject to various claims and pending or threatened lawsuits in the normal course of business. The Company is not currently party to any legal proceedings that management believes would have a material adverse effect on the Company's financial position, results of operations or cash flows. The Company has sued its former CEO and President Richard Rutkowski and his spouse to collect \$1,733,000 in outstanding loans from the Company that were due in January 2007 and remain unpaid. Counterclaims were filed by Mr. Rutkowski and his spouse, seeking to recover damages in an amount in excess of \$15,000,000. The Company believes these claims are without merit and intends to defend them vigorously. However, an adverse outcome could have a material adverse affect on its financial condition.

10. NEW ACCOUNTING PRONOUNCEMENTS

In February 2008, the FASB released a FASB Staff Position, FSP FAS 157-2 - Effective Date of FASB Statement No. 157, which delays the effective date of FAS 157 for all nonfinancial assets and liabilities, except those that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually) to fiscal years beginning after November 15, 2008. The Company is currently assessing the financial impact of FSP FAS 157-2 on its financial statements.

In June 2007, the Emerging Issues Task Force (EITF) reached a final consensus on EITF Issue No. 07-1, Accounting for Collaborative Arrangements (EITF 07-1). EITF 07-1 discusses how to determine whether an arrangement constitutes a collaborative arrangement, how costs incurred and revenue generated on sales to third parties should be reported by the participants, how an entity should characterize payments made between participants and what participants should disclose in the notes to the financial statements about a collaborative arrangement. EITF 07-1 is effective for financial statements issued for fiscal years beginning after December 15, 2008 and interim periods within those fiscal years. The Company is currently assessing the financial impact of EITF07-1 on its financial statements.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Forward-Looking Statements

The information set forth in this report in Item 2, "Management's Discussion and Analysis of Financial Condition and Results of Operations," and Item 3, "Quantitative and Qualitative Disclosure about Market Risk," includes "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and is subject to the safe harbor created by that section. Such statements may include, but are not limited to, projections of revenues, income or loss, capital expenditures, plans for product development and cooperative arrangements, future operations, financing needs or plans of Microvision, as well as assumptions relating to the foregoing. The words "anticipate," "believe," "estimate," "expect," "goal," "may," "plan," "project," "will," and similar expressions identify forward-looking statements, which speak only as of the date the statement was made. Factors that could cause actual results to differ materially from those projected in our forward-looking statements include the following: our ability to obtain financing; market acceptance of our technologies and products; our financial and technical resources relative to those of our competitors; our ability to keep up with rapid technological change; government regulation of our technologies; our ability to enforce our intellectual property rights and protect our proprietary technologies; the ability to obtain additional contract awards and to develop partnership opportunities; the timing of commercial product launches; the ability to achieve key technical milestones in key products; and other risk factors identified in this report under the caption "Item 1A - Risk Factors."

Overview

We are developing miniature display and imaging engines based upon our technology platform. Our technology platform utilizes our expertise in two dimensional Micro-Electrical Mechanical systems ("MEMS"), lasers, optics and

electronics to create a high quality video or still image from a small form factor device with lower power needs than conventional display technologies.

Our strategy is to develop and supply a proprietary display engine called PicoP to potential OEM customers who will embed them into a variety of consumer and automotive products. The primary objective for consumer applications is to provide users of mobile devices with a large screen viewing experience produced by a small embedded projector. Mobile devices may include cell phones, PDA's, gaming consoles and other consumer electronics products. These potential products would allow users to watch movies, play videos, display images, and other data onto a variety of surfaces. The PicoP with some modification could be embedded into the dashboard of an automobile or an airplane to create a heads up display (HUD) that could project point-by-point navigation, critical operational, safety and other information important to the driver or pilot. The PicoP could be further modified to be embedded into a pair of glasses to provide the mobile user with a see-through or occluded personal display to view movies, play games or access other content.

Results of Operations

Contract revenue.

(in thousands)	2008	% of contract revenue	2007	% of contract revenue	\$ change	% change
	-----	-----	-----	-----	-----	-----
Three months ended March 31						
Government revenue	\$ 908	39.8	\$ 1,609	84.6	\$ (701)	(43.6)
Commercial revenue	1,373	60.2	293	15.4	1,080	368.0
	-----		-----		-----	
Total contract revenue	\$ 2,281		\$ 1,902		\$ 379	19.9
	=====		=====		=====	

We earn contract revenue from performance on development contracts with the United States government and commercial customers.

We recognize contract revenue as work progresses on long-term, cost plus fixed fee and fixed price contracts using the percentage-of-completion method, which relies on estimates of total expected contract revenue and costs. Our revenue contracts generally include a statement of the work we are to complete and the total fee we will earn from the contract. When we begin work on the contract and at the end of each accounting period, we work with the members of our technical team to estimate the labor and material and other cost required to complete the statement of work compared to cost incurred to date. We use information provided by project managers, vendors, outside consultants and others as we deem necessary to develop our cost estimates. Since our contracts generally require some level of technology development to complete, the actual cost required to complete a statement of work can vary from our estimated cost to complete. We have developed processes that allow us to make reasonable estimates of the cost to complete a contract. Historically, we have made only immaterial revisions in the estimates to complete the contract at each reporting period. Recognized revenues are subject to revisions as the contract progresses to completion and actual revenue and cost become certain. Revisions in revenue estimates are reflected in the period in which the facts that give rise to the revision become known. In the future, revisions in these estimates could significantly impact recognized revenue in any one reporting period. If the U.S. Government cancels a contract, we would receive payment for work performed and costs committed to prior to the cancellation.

Our contract revenue in a particular period is dependent upon when we enter into a contract, the value of the contracts we have entered into, and the availability of technical resources to perform work on the contracts. Contract revenue was higher during the three months ended March 31, 2008 than the same period in 2007, due to higher beginning commercial contract backlog and the availability of resources to perform work on the contracts.

Edgar Filing: MICROVISION INC - Form 10-Q

As long as most of our revenue is earned from performance on development contracts, we believe there may be a high degree of variability in revenue from quarter to quarter.

Our backlog of development contracts at March 31, 2008 was \$1.5 million compared to \$6.5 million at March 31, 2007, all of which is scheduled for completion during the next twelve months.

Product revenue

(in thousands)	2008	% of product revenue	2007	% of product revenue	\$ change	% change
	-----	-----	-----	-----	-----	-----
Three months ended March 31						
Bar code revenue	\$ 289	100.0	\$ 283	85.0	\$ 6	2
Nomad revenue	--	--	50	15.0	(50)	(100)
	-----		-----		-----	
Total product revenue	\$ 289		\$ 333		\$ (44)	(13)
	=====		=====		=====	

Our quarterly product revenue may vary substantially due to the timing of product orders from customers, production constraints and raw material availability.

The backlog of product orders at March 31, 2008 was approximately \$338,000, compared to \$410,000 at March 31, 2007, all of which is scheduled for delivery during the next twelve months.

Cost of contract revenue

(in thousands)	2008	% of contract revenue	2007	% of contract revenue	\$ change	% change
	-----	-----	-----	-----	-----	-----
Three months ended March 31	\$ 762	33.4	\$ 1,010	53.1	\$ (248)	(24)

Cost of contract revenue includes both the direct and allocated indirect costs of performing on development contracts. Direct costs include labor, materials and other costs incurred directly in performing on a contract. Indirect costs include labor and other costs associated with operating our research and development department and building our technical capabilities and capacity. Cost of contract revenue is determined both by the level of direct costs incurred on development contracts and by the level of indirect costs incurred in operating and building our technical capabilities and capacity. Both the direct and indirect costs can fluctuate substantially from period to period.

The cost of contract revenue as a percentage of revenue was lower during the three months ended March 31, 2008 than March 31, 2007 as a result of negotiating better terms on contracts entered into in late 2007. We target a gross margin for each contract of at least 40%; however, the gross margin can vary based on the technical challenges encountered in completing the contract.

The cost of revenue as a percentage of revenue can fluctuate significantly from period to period, depending on the contract cost mix and the levels of direct and indirect costs incurred. However, over longer periods of time we expect modest fluctuations in the cost of contract revenue, as a percentage of contract revenue.

Cost of product revenue

(in thousands)	2008	% of product revenue	2007	% of product revenue	\$ change	% change
Three months ended March 31	\$ 339	117.3	\$ 284	85.3	\$ 55	19

Cost of product revenue includes both the direct and allocated indirect costs of manufacturing ROVs and Flics sold to customers. Direct costs include labor, materials and other costs incurred directly in the manufacture of ROV and Flic. Indirect costs include labor and other costs associated with operating our manufacturing capabilities and capacity.

Our overhead, which includes the costs of procuring, inspecting and storing material, facility and depreciation costs, is allocated to inventory, cost of product revenue, cost of contract revenue, and research and development expense based on the proportion of direct material purchased for the respective activity. During the three months ending March 31, 2008 and 2007, we expensed approximately \$47,000 and \$73,000, respectively, of manufacturing overhead associated with production capacity in excess of production requirements.

We expect that cost of product revenue on an absolute dollar basis will increase in the future. This increase will likely result from expected sales of commercial products. The cost of product revenue as a percentage of product revenue can fluctuate significantly from period to period, depending on the product mix, the level of overhead expense and the volume of direct materials purchased.

Research and development expense.

(in thousands)	2008	2007	\$ change	% change
Three months ended March 31	\$ 4,426	\$ 3,345	\$ 1,081	32.3

Research and development expense consists of:

- Compensation related costs of employees and contractors engaged in internal research and product development activities,
- Laboratory operations, outsourced development and processing work, and
- Other operating expenses.

We have increased spending in research and development as part of our strategy to accelerate the time to market for products based on the PicoP. The increase in cost is primarily attributable to increases in payroll costs and contracted services.

We believe that a substantial level of continuing research and development expense will be required to develop additional commercial products using the scanned beam display technology. Accordingly, we anticipate our level of research and development spending will continue to be substantial.

Sales, marketing, general and administrative expense.

(in thousands)	2008	2007	\$ change	% change
Three months ended March 31	\$ 4,135	\$ 3,550	\$ 585	16.5

Edgar Filing: MICROVISION INC - Form 10-Q

Sales, marketing, general and administrative expense includes compensation and support costs for marketing, sales, management and administrative staff, and for other general and administrative costs, including legal and accounting services, consultants and other operating expenses.

The increase in sales, marketing, general and administrative expense for the three months ended March 31, 2008 compared to the same period in 2007 was the result of increased payroll costs and marketing costs associated with our commercial products.

Interest income.

(in thousands)	2008	2007	\$ change	% change
	-----	-----	-----	-----
Three months ended March 31	\$ 412	\$ 182	\$ 230	126.4

The increase in interest income for the three months ended March 31, 2008 compared to the same period in 2007 resulted primarily from higher average cash and investment securities balances.

Interest expense.

(in thousands)	2008	2007	\$ change	% change
	-----	-----	-----	-----
Three months ended March 31	\$ 13	\$ 468	\$ (455)	(97.2)

In March and December 2005, we issued convertible notes (the "Notes") with an aggregate principal amount of \$20 million. The last payment on the Notes was made in March 2007, resulting in a decrease in interest expense for the three months ended March 31, 2008 compared to the same period in 2007.

Gain (loss) on derivative instruments, net.

(in thousands)	2008	2007	\$ change	% change
	-----	-----	-----	-----
Three months ended March 31	\$ 1,673	\$ (652)	\$ 2,325	(356.6)

We issued warrants to purchase 2,302,000 shares of common stock in connection with the issuance of the Notes. The warrants met the definition of derivative instruments that must be accounted for as liabilities under the provisions of Emerging Issues Task Force Issue No. 00-19, *Accounting for Derivative Financial Instruments Indexed to, and Potentially Settled in, a Company's Own Stock*, because we cannot engage in certain corporate transactions affecting the common stock unless we make a cash payment to the holders of the warrants. We record changes in the fair values of the warrants in the statement of operations each period. We valued the warrants at March 31, 2008 using the Black-Scholes option-pricing model with the following assumptions: expected volatilities ranging from 65% to 67%; expected dividend yields of 0%; risk free interest rates ranging from 1.4% to 1.7%; and contractual lives ranging from 0.3 years to 2.7 years. The change in value of the warrants of \$1,736,000 for the three months ended March 31, 2008 was recorded as a non-operating gain and is included in "Gain (loss) on derivative instruments, net" in the consolidated statement of operations. We valued the warrants at March 31, 2007 using the Black-Scholes option-pricing model with the following assumptions: expected volatilities of 68%; expected dividend yields of 0%; risk free interest rates ranging from 4.6% to 4.8%; and contractual lives ranging from 1.3 years to 3.7 years. The change in value of the warrants of \$560,000 for the three months ended March 31, 2007 was recorded as a

non-operating loss and is included in "Gain (loss) on derivative instruments, net" in the consolidated statement of operations.

In January 2006, we acquired warrants to purchase 170,500 shares of Lumera common stock. The warrants were valued using the Black-Scholes option-pricing model with the following assumptions: expected volatility of 83%; expected dividend yield of 0%; risk free interest rate of 4.55%; and contractual life of 5.1 years. Changes in the fair value of the warrants are recorded in the statement of operations each period. As of March 31, 2008, the warrants were valued using the Black-Scholes option-pricing model with the following assumptions: expected volatilities of 83%; expected dividend yields of 0%; risk free interest rates of 1.78%; and contractual lives of 3.0 years. As of March 31, 2008, the fair value of the warrants decreased to \$66,000 from \$130,000 at December 31, 2007 and the change in value of \$64,000 was recorded as a non-operating loss and is included in "Gain (loss) on derivative instruments, net" in the consolidated statement of operations. As of March 31, 2007, the warrants were valued using the Black-Scholes option-pricing model with the following assumptions: expected volatility of 83%; expected dividend yields of 0%; risk free interest rates of 4.5%; and contractual lives of 4.0 years. The change in value of \$160,000 for the three months ended March 31, 2007 was recorded as a non-operating loss and is included in "Gain (loss) on derivative instruments, net" in the consolidated statement of operations.

Liquidity and Capital Resources

We have funded our operations to date primarily through the sale of equity and debt securities and, to a lesser extent, from development contract revenues and product sales. At March 31, 2008, we had \$30.1 million in cash, cash equivalents and investment securities, available-for-sale. Based on our

current operating plan, we believe we have sufficient cash to fund operations through at least March 2009. We will require additional cash to fund our operating plan past that time. There can be no assurance that additional financing will be available to us or that, if available, it will be available on terms acceptable to us on a timely basis. If adequate funds are not available to satisfy either short-term or long-term capital requirements, we will be required to limit our operations substantially. This limitation of operations may include reductions in staff, operating costs and capital expenditures.

Cash used in operating activities totaled \$5.3 million during the three months ended March 31, 2008, compared to \$5.6 million during the same period in 2007. In both periods, cash used in operating activities for both periods resulted primarily from the loss from operations.

We had the following material gains and charges, and changes in assets during the three months ended March 31, 2008:

- *"Non-cash stock-based compensation expense"*

We granted fully vested options to purchase 339,000 shares of common stock under the 2006 Incentive Plan, which resulted in \$425,000 of non-cash compensation expense during the three months ended March 31, 2008.

- *"Loss (gain) on derivative instruments"*

In connection with the issuance of the Notes, we issued warrants to purchase 2,302,000 shares of common stock. Due to changes in the stock price and remaining life of the warrants, we recognized a \$1.7 million non-operating gain during the three months ended March 31, 2008.

- *"Accounts receivable"*

During the three months ended March 31, 2008, we received payments totaling \$1.0 million from two commercial customers for work that was performed in 2007.

Cash provided by investing activities totaled \$6.5 million during the three months ended March 31, 2008, compared to cash used in investing activities of \$232,000 during the same period of 2007. During the three months ended March 31, 2008, we had net sales of investment securities totaling \$7.0 million. In addition, we used cash of \$137,000 for capital expenditures during the three months ended March 31, 2008, compared to \$232,000 during the same period in 2007.

Cash used in financing activities totaled \$28,000 during the three months ended March 31, 2008, compared to \$1.4 million during the same period in 2006. The last scheduled payment on our December Notes of \$1.4 million was made in March of 2007.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Of our total cash equivalents and investment securities available-for-sale balance, 62% have variable interest rates and, as such, the fair values of the principal of these instruments are not affected by changes in market interest rates. The remaining 38% of our cash equivalents and investment securities available-for-sale balance are at fixed interest rates and, as such, the fair values of these instruments are affected by changes in market interest rates. Due to the generally short-term maturities of these investment securities, we believe that the market risk arising from our holdings of these financial instruments is not material.

Our investment policy restricts investments to ensure principal preservation and liquidity. The investment securities portfolio is comprised of short-term highly rated commercial paper, U.S. government agency notes and auction rate securities.

At March 31, 2008, \$4.3 million of our marketable securities portfolio was invested in AAA rated investments in auction-rate debt securities. Auction-rate securities are long-term variable rate bonds tied to short-term interest rates. After the initial issuance of the securities, the interest rate on the securities is reset periodically, at intervals established at the time of issuance (generally every seven, twenty-eight or thirty-five days), based on market demand for a reset period. Auction-rate securities are bought and sold in the marketplace through a competitive bidding process often referred to as a "Dutch Auction". If there is insufficient interest in the securities at the time of an auction, the auction may not be completed and the rates may be reset to predetermined "penalty" or "maximum" rates. Following such a failed auction, the holder would not be able to access its funds that are invested in the corresponding auction-rate securities until a future auction of these investments is successful or new buyers express interest in purchasing these securities in between auctions.

At the time of our initial investment and through the date of the filing of this report, all of our auction-rate securities in which we invest remain AAA rated, collateralized and there have been no declines in the credit ratings of the issuers. Subsequent to March 31, 2008, we successfully liquidated into cash equivalents, \$1.1 million of the \$4.3 million of auction-rate securities held at March 31, 2008. The \$1.1 million equaled our original purchase value. The remaining \$3.2 million of auction rate securities have been subject to failed auctions in 2008 as a result of the current negative liquidity conditions in the global credit markets. The failed auctions have rendered these securities temporarily illiquid through the normal auction process. The collateral for our student loan auction-rate securities ("SLARS") are the student loans and collections thereon. The collateral for the municipal auction-rate securities is the user fees collected on the public works project that was funded. In addition, the underlying loans in the SLARS are guaranteed by the Federal Family Education Loan Program and other federal and state student loan guarantee programs. AMBAC is the insurer on a majority of the auction-rate securities that we hold. As of March 3, 2008, AMBAC was rated AAA by Moody's and Standard and Poor's and AA by Fitch Ratings. Although these insurers are highly rated, they are reported to be experiencing financial difficulty, which could negatively affect their ratings and thus the ratings of the auction-rate securities that we hold. If the issuers are unable to successfully clear future auctions or if the insurer's credit rating deteriorates and the deterioration is deemed to be other-than-temporary, we would be required to adjust the carrying value of the auction-rate securities through an impairment charge to earnings. Any of these events could affect our results of operations and our financial condition. In the event we need to access these funds, we could be required to sell these securities at an amount below our original purchase value. However, based on our ability to access our cash and cash equivalents and our other liquid investments, totaling \$25.8 million at March 31, 2008, we do not expect to be required to sell these securities at a loss. If we were required to sell the securities at a loss, we believe the loss would be immaterial to our results of operations, comprehensive loss and cash flows. The auction-rate securities remain AAA rated, collateralized and there have been no declines in the credit ratings of the issuers. In addition, all of the auction-rate securities that we have liquidated have been sold at par value. Therefore, we believe

that we will be able to liquidate our remaining auction rate securities within one year and have classified them as short-term.

The values of cash equivalents and investment securities, available-for-sale, by maturity date as of March 31, 2008, are as follows (in thousands):

	Amount	Percent
	-----	-----
Cash	\$710	2.36%
Less than one year	\$21,572	71.68%
One to two years	\$3,511	11.67%
Greater than five years	\$4,300	14.29%
	-----	-----
	30,093	100.00%
	=====	=====

All of the Company's development contract payments are made in U.S. dollars. However, in the future the Company may enter into additional development contracts in foreign currencies that may subject the Company to foreign exchange rate risk. The Company intends to enter into foreign currency hedges to offset the exposure to currency fluctuations when it can determine the timing and amounts of the foreign currency exposure.

ITEM 4.

CONTROLS AND PROCEDURES

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we have evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e)) as of the end of the period covered by this report and, based on this evaluation, our principal executive officer and principal financial officer have concluded that these disclosure controls and procedures are effective. There were no changes in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f)) that occurred during the period covered by this report that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II

OTHER INFORMATION

ITEM 1A

- RISK FACTORS

Risk Factors Relating to the Microvision Business

We have a history of operating losses and expect to incur significant losses in the future.

We have had substantial losses since our inception. We cannot assure you that we will ever become or remain profitable.

- As of March 31, 2008, we had an accumulated deficit of \$264.5 million.
- We incurred consolidated net losses of \$215.7 million from inception through 2005, \$24.0 million in 2006, \$19.8 million in 2007, and consolidated net loss of \$5.0 million in the three months ended March 31, 2008.

The likelihood of our success must be considered in light of the expenses, difficulties and delays frequently encountered by companies formed to develop and market new technologies. In particular, our operations to date have focused primarily on research and development of the scanned beam technology and development of demonstration units. We are unable to accurately estimate future revenues and operating expenses based upon historical performance.

We cannot be certain that we will succeed in obtaining additional development contracts or that we will be able to obtain substantial customer orders for our products. In light of these factors, we expect to continue to incur substantial losses and negative cash flow at least through 2008 and likely thereafter. We cannot be certain that we will achieve positive cash flow at any time in the future.

We will require additional capital to fund our operations and to implement our business plan. If we do not obtain additional capital, we may be required to curtail our operations substantially. Raising additional capital may dilute the value of current shareholders' shares.

Based on our current operating plan, we believe we have sufficient cash to fund operations through at least March 2009. We will require additional cash to fund our operating plan past that time. We plan to obtain additional cash through the issuance of equity or debt securities. We will require additional capital in the future to fund our operations, including to:

- Further develop the technology platform and PicoP display engine,
- Develop and protect our intellectual property rights, and
- Fund long-term marketing and business development opportunities.

Our capital requirements will depend on many factors, including, but not limited to, the rate at which we can, directly or through arrangements with original equipment manufacturers, introduce products incorporating the PicoP display engine and image capture technologies and the market acceptance and competitive position of such products. If revenues are less than we anticipate, if the level and mix of revenues vary from anticipated amounts and allocations or if expenses exceed the amounts budgeted, we may require additional capital earlier than expected to further the development of our technologies, for expenses associated with product development, and to respond to competitive pressures or to meet unanticipated development difficulties. In addition, our operating plan provides for the development of strategic relationships with systems and equipment manufacturers that may require additional investments by us.

Additional capital may not be available to us, or if available, on terms acceptable to us or on a timely basis. Raising additional capital may involve issuing securities with rights and preferences that are senior to our common stock and may dilute the value of current shareholders' shares. If adequate funds are not available to satisfy long-term capital requirements, we may be required to limit our operations substantially. This limitation of operations may include reductions in staff and operating costs as well as reductions in capital expenditures and investment in research and development.

We cannot be certain that our technology platform or products incorporating our PicoP display engine will achieve market acceptance. If products incorporating the PicoP display engine do not achieve market acceptance, our revenues may not grow.

Our success will depend in part on customer acceptance of the PicoP display engine. The PicoP display engine may not be accepted by manufacturers who use display technologies in their products, by systems integrators who incorporate our products into their products or by end users of these products. To be accepted, the PicoP display engine must meet the expectations of our potential customers in the defense, industrial, medical and consumer markets. If our technology fails to achieve market acceptance, we may not be able to continue to develop our technology platform.

It may become more difficult to sell our stock in the public market.

Our common stock is listed for quotation on The NASDAQ Global Market. To keep our listing on this market, we must meet NASDAQ's listing maintenance standards. If we are unable to continue to meet NASDAQ's listing maintenance standards, our common stock could be delisted from The NASDAQ Global Market. If our common stock were delisted, we likely would seek to list the common stock on the NASDAQ Capital Market, the American Stock Exchange or on a regional stock exchange. Listing on such other market or exchange could reduce the liquidity for our common stock. If our common stock were not listed on the Capital Market or an exchange, trading of our common stock would be conducted in the over-the-counter market on an electronic bulletin board established for unlisted securities or directly through market makers in our common stock. If our common stock were to trade in the over-the-counter market, an investor would find it more difficult to dispose of, or to obtain accurate quotations for the price of, the common stock. A delisting from The NASDAQ Global Market and failure to obtain listing on such other market or exchange would subject our securities to so-called penny stock rules that impose additional sales practice and market-making requirements on broker-dealers who sell or make a market in such securities. Consequently, removal from The NASDAQ Global Market and failure to obtain listing on another market or exchange could affect the ability or willingness of broker-dealers to sell or make a market in our common stock and the ability of purchasers of our common stock to sell their securities in the secondary market. In addition, when the market price of our common stock is less than \$5.00 per share, we become subject to penny stock rules even if our common stock is still listed on The NASDAQ Global Market. While the penny stock rules should not affect the quotation of our common stock on The NASDAQ Global Market, these rules may further limit the market liquidity of our common stock and the ability of investors to sell our common stock in the secondary market. At some point during all four quarters of 2006 and 2007 and the first quarter of 2008, the market price of our stock traded below \$5.00 per share. On May 7, 2008, the closing price of our stock was \$3.01.

Our lack of the financial and technical resources relative to our competitors may limit our revenues, potential profits, overall market share or value.

Our current products and potential future products will compete with established manufacturers of existing products and companies developing new technologies. Many of our competitors have substantially greater financial, technical and other resources than we have. Because of their greater resources, our competitors may develop products or technologies that are superior to our own. The introduction of superior competing products or technologies could result in reduced revenues, lower margins or loss of market share, any of which could reduce the value of our business.

We may not be able to keep up with rapid technological change and our financial results may suffer.

The information display industry has been characterized by rapidly changing technology, accelerated product obsolescence and continuously evolving industry standards. Our success will depend upon our ability to further develop our technology platform and to cost effectively introduce new products and features in a timely manner to meet evolving customer requirements and compete with competitors' product advances.

We may not succeed in these efforts because of:

- delays in product development,
- lack of market acceptance for our products, or
- lack of funds to invest in product development and marketing.

The occurrence of any of the above factors could result in decreased revenues, market share and value.

We could face lawsuits related to our use of the PicoP display engine or other technologies. Defending these suits would be costly and time consuming. An adverse outcome in any such matter could limit our ability to commercialize

our technology and products, reduce our revenues and increase our operating expenses.

We are aware of several patents held by third parties that relate to certain aspects of light scanning displays and image capture products. These patents could be used as a basis to challenge the validity, limit the scope or limit our ability to obtain additional or broader patent rights of our patents or patents we have licensed. A successful challenge to the validity of our patents or patents we have licensed could limit our ability to commercialize our technology and the PicoP display engine and, consequently, materially reduce our revenues. Moreover, we cannot be certain that patent holders or other third parties will not claim infringement by us with respect to current and future technology. Because U.S. patent applications are held and examined in secrecy, it is also possible that presently pending U.S. applications will eventually be issued with claims that will be infringed by our products or our technology. The defense and prosecution of a patent suit would be costly and time consuming, even if the outcome were ultimately favorable to us. An adverse outcome in the defense of a patent suit could subject us to significant cost, to require others and us to cease selling products that incorporate the PicoP display engine, to cease licensing our technology or to require disputed rights to be licensed from third parties. Such licenses, if available, would increase our operating expenses. Moreover, if claims of infringement are asserted against our future co-development partners or customers, those partners or customers may seek indemnification from us for damages or expenses they incur.

Our planned future products are dependent on advances in technology by other companies.

We rely on and will continue to rely on technologies, such as light sources, MEMS and optical components that are developed and produced by other companies. The commercial success of certain of our planned future products will depend in part on advances in these and other technologies by other companies. We may, from time to time, contract with and support companies developing key technologies in order to accelerate the development of them for our specific uses. There are no guarantees that such activities will result in useful technologies or components for us.

Our products may be subject to future health and safety regulations that could increase our development and production costs.

Products incorporating the PicoP display engine could become subject to new health and safety regulations that would reduce our ability to commercialize the PicoP display engine. Compliance with any such new regulations would likely increase our cost to develop and produce products using the PicoP display engine and adversely affect our financial results.

If we cannot manufacture products at competitive prices, our financial results will be adversely affected.

To date, we have produced limited quantities of our ROV and Flic products for commercial sale and demonstration units for research, development and demonstration purposes. The cost per unit for these units currently exceeds the level at which we could expect to profitably sell these products. If we cannot lower our cost of production, we may face increased demands on our financial resources, possibly requiring additional equity and/or debt financing to sustain our business operations.

Our dependence on sales to distributors increases the risks of managing our supply chain and may result in excess inventory or inventory shortages.

Currently, the majority of our distributor relationships for the ROV Scanner and its accessories involve the distributor taking inventory positions and reselling to multiple customers. With these distributor relationships, we do not recognize revenue until the distributors sell the product through to their end user customers. Our distributor relationships do reduce our ability to forecast sales and increases risks to our business. Since our distributors act as intermediaries between us and the end user customers, we must rely on our distributors to accurately report inventory levels and production forecasts. This requires us to manage a more complex supply chain and monitor the financial condition and credit worthiness of our distributors and the end user customers. Our failure to manage one or more of

these risks could result in excess inventory or shortages that could adversely impact our operating results and financial condition.

We do not have long-term commitments from our ROV customers, and plan purchases based upon our estimates of customer demand, which may require us to contract for the manufacture of our products based on inaccurate estimates.

Our ROV sales are made on the basis of purchase orders rather than long-term commitments. Our customers may cancel or defer purchases at any time. This requires us to forecast demand based upon assumptions that may not be correct. If our customers or we overestimate demand, we may create inventory that we may not be able to sell or use, resulting in excess inventory, which could become obsolete or negatively affect our operating results. Conversely, if our customers or we underestimate demand, or if sufficient manufacturing capacity is not available, we may lose revenue opportunities, damage customer relationships, and we may not achieve expected revenues.

Our future growth will suffer if we do not achieve sufficient market acceptance of our products to compete effectively.

Our success depends, in part, on our ability to gain acceptance of our current and future products by a large number of customers. Achieving market based acceptance for our products will require marketing efforts and the expenditure of financial and other resources to create product awareness and demand by potential customers. We may be unable to offer products consistently or at all that compete effectively with products of others on the basis of price or performance. Failure to achieve broad acceptance of our products by potential customers and to effectively compete would have a material adverse effect on our operating results.

Because we plan to continue using foreign contract manufacturers, our operating results could be harmed by economic, political, regulatory and other factors in foreign countries.

We currently use a contract manufacturer in Asia to manufacture our ROV product, and we plan to use foreign manufacturers to manufacture future products, where appropriate. These international operations are subject to inherent risks, which may adversely affect us, including:

- political and economic instability;
- high levels of inflation, historically the case in a number of countries in Asia;
- burdens and costs of compliance with a variety of foreign laws;
- foreign taxes;
- changes in tariff rates or other trade and monetary policies; and
- changes or volatility in currency exchange rates.

If we have to qualify a new contract manufacturer or foundry for our products, we may experience delays that result in lost revenues and damaged customer relationships.

We rely on single suppliers to manufacture our ROV Scanner product and our MEMS chips in wafer form. The lead time required to establish a relationship with a new contract manufacturer or foundry is long, and it takes time to adapt a product's design to a particular manufacturer's processes. Accordingly, there is no readily available alternative source of supply for these products and components in high volumes. This could cause significant delays in shipping products if we have to change our source of supply and manufacture quickly, which may result in lost revenues and damaged customer relationships.

If we experience delays or failures in developing commercially viable products, we may have lower revenues.

We have developed demonstration units incorporating the PicoP display engine. However, we must undertake additional research, development and testing before we are able to develop additional products for commercial sale. Product development delays by us or our potential product development partners, or the inability to enter into

relationships with these partners, may delay or prevent us from introducing products for commercial sale. We intend to rely on third party developments or to contract with other companies to continue development of green laser devices we will need for our products.

Our success will depend, in part, on our ability to secure significant third party manufacturing resources.

We are developing our capability to manufacture products in commercial quantities. Our success depends, in part, on our ability to provide our components and future products in commercial quantities at competitive prices. Accordingly, we will be required to obtain access, through business partners or contract manufacturers, to manufacturing capacity and processes for the commercial production of our expected future products. We cannot be certain that we will successfully obtain access to sufficient manufacturing resources. Future manufacturing limitations of our suppliers could result in a limitation on the number of products incorporating our technology that we are able to produce.

If our licensors and we are unable to obtain effective intellectual property protection for our products and technology, we may be unable to compete with other companies.

Intellectual property protection for our products is important and uncertain. If we do not obtain effective intellectual property protection for our products, processes and technology, we may be subject to increased competition. Our commercial success will depend in part on our ability and the ability of the University of Washington and our other licensors to maintain the proprietary nature of the PicoP display and other key technologies by securing valid and enforceable patents and effectively maintaining unpatented technology as trade secrets. We try to protect our proprietary technology by seeking to obtain United States and foreign patents in our name, or licenses to third-party patents, related to proprietary technology, inventions, and improvements that may be important to the development of our business. However, our patent position and the patent position of the University of Washington and other licensors involve complex legal and factual questions. The standards that the United States Patent and Trademark Office and its foreign counterparts use to grant patents are not always applied predictably or uniformly and can change. Additionally, the scope of patents are subject to interpretation by courts and their validity can be subject to challenges and defenses, including challenges and defenses based on the existence of prior art. Consequently, we cannot be certain as to the extent to which we will be able to obtain patents for our new products and technology or the extent to which the patents that we already own or license from others protect our products and technology. Reduction in scope of protection or invalidation of our licensed or owned patents, or our inability to obtain new patents, may enable other companies to develop products that compete with ours on the basis of the same or similar technology.

We also rely on the law of trade secrets to protect unpatented know-how and technology to maintain our competitive position. We try to protect this know-how and technology by limiting access to the trade secrets to those of our employees, contractors and partners with a need to know such information and by entering into confidentiality agreements with parties that have access to it, such as our employees, consultants and business partners. Any of these parties could breach the agreements and disclose our trade secrets or confidential information, or our competitors might learn of the information in some other way. If any trade secret not protected by a patent were to be disclosed to or independently developed by a competitor, our competitive position could be materially harmed.

We could be exposed to significant product liability claims that could be time-consuming and costly, divert management attention and adversely affect our ability to obtain and maintain insurance coverage.

We may be subject to product liability claims if any of our product applications are alleged to be defective or cause harmful effects. For example, because some of our PicoP displays are designed to scan a low power beam of colored light into the user's eye, the testing, manufacture, marketing and sale of these products involve an inherent risk that product liability claims will be asserted against us. Product liability claims or other claims related to our products, regardless of their outcome, could require us to spend significant time and money in litigation, divert management time and attention, require us to pay significant damages, harm our reputation or hinder acceptance of our products.

Any successful product liability claim may prevent us from obtaining adequate product liability insurance in the future on commercially desirable or reasonable terms. An inability to obtain sufficient insurance coverage at an acceptable cost or otherwise to protect against potential product liability claims could prevent or inhibit the commercialization of our products.

We rely heavily on a limited number of development contracts with the U.S. government, which are subject to immediate termination by the government for convenience at any time, and the termination of one or more of these contracts could have a material adverse impact on our operations.

During the first quarter of 2008 and the full year of 2007, 35% and 61%, respectively, of our revenue was derived from performance on a limited number of development contracts with the U.S. government. Therefore, any significant disruption or deterioration of our relationship with the U.S. government would significantly reduce our revenues. Our government programs must compete with programs managed by other contractors for limited amounts and uncertain levels of funding. The total amount and levels of funding are susceptible to significant fluctuations on a year-to-year basis. Our competitors continuously engage in efforts to expand their business relationships with the government and are likely to continue these efforts in the future. Our contracts with the government are subject to immediate termination by the government for convenience at any time. The government may choose to use contractors with competing display technologies or it may decide to discontinue any of our programs altogether. In addition, those development contracts that we do obtain require ongoing compliance with applicable government regulations. Termination of our development contracts, a shift in government spending to other programs in which we are not involved, a reduction in government spending generally, or our failure to meet applicable government regulations could have severe consequences for our results of operations.

Our development agreements have long sales cycles, which make it difficult to plan our expenses and forecast our revenues.

Our development agreements have lengthy sales cycles that involve numerous steps including determination of a product application, exploring the technical feasibility of a proposed product, evaluating the costs of manufacturing a product and manufacturing or contracting out the manufacturing of the product. Our long sales cycle, which can last several years, makes it difficult to predict the quarter in which contract signing and revenue recognition will occur. Delays in entering into development agreements could cause significant variability in our revenues and operating results for any particular quarterly period.

Our development contracts may not lead to products that will be profitable.

Our development contracts, including without limitation those discussed in this document are exploratory in nature and are intended to develop new types of products for new applications. These efforts may prove unsuccessful and these relationships may not result in the development of products that will be profitable.

Our revenues are highly sensitive to developments in the defense industry.

Our revenues to date have been derived principally from product development research relating to defense applications of our technology. We believe that development programs and sales of potential products in this market will represent a significant portion of our future revenues. Developments that adversely affect the defense sector, including delays in government funding and a general economic downturn, could cause our revenues to decline substantially.

If we lose our rights under our third party technology licenses, our operations will be adversely affected.

Our business depends in part on technology rights licensed from third parties. We could lose our exclusivity or other rights to use the technology under our licenses if we fail to comply with the terms and performance requirements of

the licenses. In addition, certain licensors may terminate a license upon our breach and have the right to consent to sublicense arrangements. If we were to lose our rights under any of these licenses, or if we were unable to obtain required consents to future sublicenses, we would lose a competitive advantage in the market, and may even lose the ability to commercialize our products completely. Either of these results could substantially decrease our revenues.

We are dependent on third parties in order to develop, manufacture, sell and market our products.

Our strategy for commercializing our technology and products incorporating the PicoP display engine includes entering into cooperative development, manufacturing, sales and marketing arrangements with corporate partners, original equipment manufacturers and other third parties. We cannot be certain that we will be able to negotiate arrangements on acceptable terms, if at all, or that these arrangements will be successful in yielding commercially viable products. If we cannot establish these arrangements, we would require additional capital to undertake such activities on our own and would require extensive manufacturing, sales and marketing expertise that we do not currently possess and that may be difficult to obtain. In addition, we could encounter significant delays in introducing the PicoP display engine or find that the development, manufacture or sale of products incorporating the PicoP display engine would not be feasible. To the extent that we enter into cooperative development, sales and marketing or other joint venture arrangements, our revenues will depend upon the performance of third parties. We cannot be certain that any such arrangements will be successful.

Loss of any of our key personnel could have a negative effect on the operation of our business.

Our success depends on our executive officers and other key personnel and on the ability to attract and retain qualified new personnel. Achievement of our business objectives will require substantial additional expertise in the areas of sales and marketing, research and product development and manufacturing. Competition for qualified personnel in these fields is intense, and the inability to attract and retain additional highly skilled personnel, or the loss of key personnel, could reduce our revenues and adversely affect our business.

We are dependent on a small number of customers for our revenue. Our quarterly performance may vary substantially and this variance, as well as general market conditions, may cause our stock price to fluctuate greatly and potentially expose us to litigation.

Our revenues to date have been generated primarily from a limited number of development contracts with U.S. government entities and commercial partners. Our quarterly operating results may vary significantly based on:

- reductions or delays in funding of development programs involving new information display technologies by the U.S. government or our current or prospective commercial partners;
- changes in evaluations and recommendations by any securities analysts following our stock or our industry generally;
- announcements by other companies in our industry;
- changes in business or regulatory conditions;
- announcements or implementation by our competitors of technological innovations or new products;
- the status of particular development programs and the timing of performance under specific development agreements;
- economic and stock market conditions; or
- other factors unrelated to our company or industry.

In one or more future quarters, our results of operations may fall below the expectations of securities analysts and investors and the trading price of our common stock may decline as a consequence. In addition, following periods of volatility in the market price of a company's securities, shareholders often have instituted securities class action litigation against that company. If we become involved in a class action suit, it could divert the attention of management, and, if adversely determined, could require us to pay substantial damages.

If we fail to manage expansion effectively, our revenue and expenses could be adversely affected.

Our ability to successfully offer products and implement our business plan in a rapidly evolving market requires an effective planning and management process. The growth in business and relationships with customers and other third parties has placed, and will continue to place, a significant strain on our management systems and resources. We will need to continue to improve our financial and managerial controls, reporting systems and procedures and will need to continue to train and manage our work force.
