Table of Contents

POWER INTEGRATIONS, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

1. BASIS OF PRESENTATION:

The condensed consolidated financial statements include the accounts of Power Integrations, Inc., a Delaware corporation (the "Company"), and its wholly owned subsidiaries. Significant intercompany accounts and transactions have been eliminated.

While the financial information furnished is unaudited, the condensed consolidated financial statements included in this report reflect all adjustments (consisting only of normal recurring adjustments) that the Company considers necessary for the fair presentation of the results of operations for the interim periods covered and the financial condition of the Company at the date of the interim balance sheet in accordance with accounting principles generally accepted in the United States of America ("U.S. GAAP"). The results for interim periods are not necessarily indicative of the results for the entire year. The condensed consolidated financial statements should be read in conjunction with the Power Integrations, Inc. consolidated financial statements and the notes thereto for the year ended December 31, 2011 included in its Form 10-K filed on February 29, 2012 with the Securities and Exchange Commission.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

No significant changes have been made to the Company's significant accounting policies disclosed in Note 2, Summary of Significant Accounting Policies, in its Annual Report on Form 10-K, filed on February 29, 2012, for the year ended December 31, 2011. The accounting policy information below is to aid in the understanding of the financial information disclosed.

Cash and Cash Equivalents

The Company considers cash invested in highly liquid financial instruments with maturities of three months or less at the date of purchase to be cash equivalents.

Marketable Securities

In the first quarter of 2012, the Company changed its investment policy to permit the sale of long-term and short-term investments prior to their stated maturity date. The Company generally holds securities until maturity; however, they may now be sold under certain circumstances, including, but not limited to, when necessary for the funding of acquisitions and other strategic investments. As a result of this change in policy the Company classifies its investment portfolio as available-for-sale as opposed to held-to-maturity as of March 31, 2012. Prior to March 31, 2012, the Company classified its investments as held-to-maturity. In connection with this change in investment policy the Company classified all investments with an original maturity date greater than three months as short-term investments in its Condensed Consolidated Balance Sheet. The Company's short-term investment portfolio is invested in highly liquid financial instruments with maturities greater than three months. As of March 31, 2012 and December 31, 2011, the Company's marketable securities consisted of U.S. government-backed securities, municipal bonds, corporate commercial paper, certificates of deposit and other high-quality commercial securities.

Amortized cost and estimated fair market value of investments classified as available-for-sale at March 31, 2012, are as follows (in thousands):

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

	Amortized Cost	Gross Unrealized		Estimated Fair Market Value
		Gains	Losses	
Investments due in less than 3 months:

Total	\$30,433	\$117	\$—	\$30,550
Total investment securities	\$83,238	\$291	\$—	\$83,529

Amortized cost and estimated fair market value of investments classified as held-to-maturity at December 31, 2011 are as follows (in thousands):

	Amortized Cost	Gross Unrealized		Estimated Fair Market Value
		Gains	Losses	
Investments due in less than 3 months:				
Commercial paper	\$9,849	\$—	\$—	\$9,849
Corporate securities	6,098	9	(1)	6,106
Total	\$15,947	\$9	\$(1)	\$15,955
Investments due in 4-12 months:				
Corporate securities	\$24,801	\$179	\$(23)	\$24,957
Certificates of deposit	10,000	1	—	10,001
Total	\$34,801	\$180	\$(23)	\$34,958
Investments due in more than 12 months:				
Corporate securities	\$32,041	\$5	\$(178)	\$31,868
Total	\$32,041	\$5	\$(178)	\$31,868
Total investment securities	\$82,789	\$194	\$(202)	\$82,781

As of March 31, 2012 the Company had no marketable securities in an unrealized loss position. The Company evaluated the nature of the investments with a loss position at December 31, 2011, which were primarily high-quality commercial securities, and determined the unrealized losses were not other-than-temporary.

Revenue Recognition

Product revenues consist of sales to original equipment manufacturers (“OEMs”), merchant power supply manufacturers and distributors. Approximately 71% of the Company's net product sales were made to distributors in the three months ended March 31, 2012, and 71% in the twelve months ended December 31, 2011. The Company applies the

provisions of Accounting Standard Codification (“ASC”) 605-10 (“ASC 605-10”) and all related appropriate guidance. Revenue is recognized when all of the following criteria have been met: (1) persuasive evidence of an arrangement exists, (2) delivery has occurred, (3) the price is fixed or determinable, and (4) collectability is reasonably assured. Customer purchase orders are

10

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

generally used to determine the existence of an arrangement. Delivery is considered to have occurred when title and risk of loss have transferred to the Company's customer. The Company evaluates whether the price is fixed or determinable based on the payment terms associated with the transaction and whether the sales price is subject to refund or adjustment. With respect to collectability, the Company performs credit checks for new customers and performs ongoing evaluations of its existing customers' financial condition and requires letters of credit whenever deemed necessary.

Sales to international OEM customers and merchant power supply manufacturers that are shipped from the Company's facility in California are pursuant to "delivered at frontier" ("DAF") shipping terms. As such, title to the product passes to the customer when the shipment reaches the destination country and revenue is recognized upon the arrival of the product in that country. Sales to international OEMs and merchant power supply manufacturers for shipments from the Company's facility outside of the United States are pursuant to "EX Works" ("EXW") shipping terms, meaning that title to the product transfers to the customer upon shipment from the Company's foreign warehouse. Shipments to OEMs and merchant power supply manufacturers in the Americas are pursuant to "free on board" ("FOB") point of origin shipping terms meaning that title is passed to the customer upon shipment. Revenue is recognized upon title transfer for sales to OEMs and merchant power supply manufacturers, assuming all other criteria for revenue recognition are met.

Sales to distributors are made under terms allowing certain price adjustments and rights of return on the Company's products held by its distributors. As a result of these rights, the Company defers the recognition of revenue and the costs of revenues derived from sales to distributors until the Company's distributors report that they have sold the Company's products to their customers. The Company's recognition of such distributor sell-through is based on point of sale reports received from the distributors, at which time the price is no longer subject to adjustment and is fixed, and the products are no longer subject to return to the Company except pursuant to warranty terms. The gross profit that is deferred as a result of this policy is reflected as "deferred income on sales to distributors" in the accompanying condensed consolidated balance sheets. The total deferred revenue as of March 31, 2012 and December 31, 2011 was approximately \$18.9 million and \$16.7 million, respectively. The total deferred cost as of March 31, 2012 and December 31, 2011 was approximately \$9.5 million and \$8.8 million, respectively.

Frequently, distributors need to sell at a price lower than the standard distribution price in order to win business. At or soon after the distributor invoices its customer, the distributor submits a "ship and debit" price adjustment claim to the Company to adjust the distributor's cost from the standard price to the pre-approved lower price. After verification by the Company, a credit memo is issued to the distributor for the ship and debit claim. The Company maintains a reserve for unprocessed claims and future ship and debit price adjustments. The reserve appears as a reduction to accounts receivable in the Company's accompanying consolidated balance sheets. To the extent future ship and debit claims significantly exceed amounts estimated, there could be a material impact on the deferred revenue and deferred margin ultimately recognized. To evaluate the adequacy of its reserves, the Company analyzes historical ship and debit payments and levels of inventory in the distributor channels.

Common Stock Repurchases and Common Stock Dividend

In February 2011, the board of directors authorized the use of \$50.0 million for the repurchase of the Company's common stock, with repurchases to be executed according to certain pre-defined price/volume guidelines set by the board of directors. In the twelve months ended December 31, 2011, the Company repurchased 1.5 million shares for a total cost of \$50.0 million, concluding this repurchase program. In November 2011, the board of directors authorized the use of an additional \$30.0 million for the repurchase of the Company's common stock, and in March 2012, the Company canceled its \$30 million stock repurchase program in connection with its purchase agreement to acquire

CT-Concept Technologie AG. Refer to note 14, Acquisition, for acquisition details.

In October 2010, the Company's board of directors declared four quarterly cash dividends in the amount of \$0.05 per share to be paid to stockholders of record at the end of each quarter in 2011. The first quarterly dividend payment of approximately \$1.4 million was made on March 31, 2011, the second quarterly dividend payment of \$1.4 million was made on June 30, 2011, the third payment of \$1.4 million was made on September 30, 2011, and the final 2011 dividend payment of \$1.4 million was made on December 30, 2011. In January 2012, the Company's board of directors declared four quarterly cash dividends in the amount of \$0.05 per share to be paid to stockholders of record at the end of each quarter in 2012. The first quarterly dividend payment of approximately \$1.4 million was made on March 30, 2012, with subsequent quarterly payments to be approximately the same amount. The declaration of any future cash dividend is at the discretion of the board of directors and will depend on the Company's financial condition, results of operations, capital requirements, business conditions and other

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

factors, as well as a determination that cash dividends are in the best interest of the Company's stockholders.

Use of Estimates

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. On an ongoing basis, the Company evaluates its estimates, including those related to revenue recognition, income tax, stock-based compensation and inventories. These estimates are based on historical facts and various other assumptions that the Company believes to be reasonable at the time the estimates are made.

Components of the Company's Condensed Consolidated Balance Sheet

Accounts Receivable (in thousands):

Total	\$43,724	\$26,511

3. STOCK PLANS AND SHARE-BASED COMPENSATION:

Stock Plans

As of March 31, 2012, the Company had two stock-based compensation plans (the "Plans") which are described

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

below.

2007 Equity Incentive Plan

The 2007 Equity Incentive Plan (the "2007 Plan") was adopted by the board of directors on September 10, 2007 and approved by the stockholders on November 7, 2007 as an amendment and restatement of the 1997 Stock Option Plan (the "1997 Plan"). The 2007 Plan provides for the grant of incentive stock options, nonstatutory stock options, restricted stock awards, restricted stock unit awards ("RSUs"), stock appreciation rights, performance stock awards and other stock awards to employees, directors and consultants. As of March 31, 2012, the maximum remaining number of shares that may be issued under the 2007 Plan was 6,352,885 shares, which includes options issued but not exercised and awards granted but unvested and shares remaining available for issuance under the 1997 Plan, including shares subject to outstanding options and stock awards under the 1997 Plan. Pursuant to the 2007 Plan, the exercise price for incentive stock options and nonstatutory stock options is generally at least 100% of the fair market value of the underlying shares on the date of grant. Options generally vest over 48 months measured from the date of grant. Options generally expire no later than ten years after the date of grant, subject to earlier termination upon an optionee's cessation of employment or service.

Beginning January 27, 2009, grants pursuant to the Directors Equity Compensation Program (that was adopted by the board of directors on January 27, 2009) to nonemployee directors have been made primarily under the 2007 Plan. The Directors Equity Compensation Program provides in certain circumstances (depending on the status of the particular director's holdings of Company stock options) for the automatic grant of nonstatutory stock options to nonemployee directors of the Company on the first trading day of July in each year over their period of service on the board of directors. Further, each future nonemployee director of the Company would be granted under the 2007 Plan: (a) on the first trading day of the month following commencement of service, an option to purchase the number of shares of common stock equal to: the fraction of a year between the date of the director's appointment to the board of directors and the next July 1, multiplied by 8,000, which option shall vest on the next July 1st; and (b) on the first trading day of July following commencement of service, an option to purchase 24,000 shares vesting monthly over the three year period commencing on the grant date. The Directors Equity Compensation Program will remain in effect at the discretion of the board of directors or the compensation committee.

On July 28, 2009, the 2007 Plan was amended generally to prohibit outstanding options or stock appreciation rights from being cancelled in exchange for cash without stockholder approval.

1997 Employee Stock Purchase Plan

Under the 1997 Employee Stock Purchase Plan (the "Purchase Plan"), eligible employees may apply accumulated payroll deductions, which may not exceed 15% of an employee's compensation, to the purchase of shares of the Company's common stock at periodic intervals. The purchase price of stock under the Purchase Plan is equal to 85% of the lower of (i) the fair market value of the Company's common stock on the first day of each offering period, or (ii) the fair market value of the Company's common stock on the purchase date (as defined in the Purchase Plan). Each offering period consists of one purchase period of approximately six months duration. An aggregate of 3,000,000 shares of common stock were reserved for issuance to employees under the Purchase Plan. As of March 31, 2012, 2,412,036 shares had been purchased and 587,964 shares were reserved for future issuance under the Purchase Plan.

Stock-Based Compensation

The Company applies the provisions of ASC 718-10. Under the provisions of ASC 718-10, the Company recognizes the fair value of stock-based compensation in financial statements over the requisite service period of the individual grants, which generally equals a four-year vesting period. The Company uses estimates of volatility, expected term, risk-free interest rate, dividend yield and forfeitures in determining the fair value of these awards and the amount of compensation expense to recognize. The Company uses the straight-line method to amortize all stock awards granted over the requisite service period of the award.

Determining Fair Value of Stock Options

The Company uses the Black-Scholes valuation model for valuing stock option grants using the following assumptions and estimates:

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Expected Volatility. The Company calculates expected volatility as an average of implied volatility and historical volatility.

Expected Term. The Company utilizes a model which uses historical exercise, cancellation and outstanding option data to calculate the expected term of stock option grants.

Risk-Free Interest Rate. The Company bases the risk-free interest rate used in the Black-Scholes valuation model on the implied yield available on a U.S. Treasury note with a term approximately equal to the expected term of the underlying grants.

Dividend Yield. The dividend yield was calculated by dividing the annual dividend by the average closing price of the Company's common stock on a quarterly basis.

Estimated Forfeitures. The Company uses historical data to estimate pre-vesting forfeitures, and records share-based compensation expense only for those awards that are expected to vest.

The following table summarizes the stock-based compensation expense recognized in accordance with ASC 718-10 for the three months ended March 31, 2012 and March 31, 2011 (in thousands).

	Three Months Ended March 31,	
	2012	2011
Cost of revenues	\$245	\$239
Research and development	1,120	811
Sales and marketing	747	667
General and administrative	919	787
Total stock-based compensation expense	\$3,031	\$2,504

As of March 31, 2012 there were approximately \$5.0 million, net of expected forfeitures, of total unrecognized compensation expense related to stock options. The unrecognized compensation expense at March 31, 2012 is expected to be recognized over a weighted-average period of 1.7 years.

As of March 31, 2012, the Company had \$11.3 million of total unrecognized compensation expense, net of estimated forfeitures, related to restricted stock units. The unamortized compensation expense will be recognized on a straight-line basis over a weighted-average period of 2.6 years.

As of March 31, 2012, the Company had \$2.8 million of total unrecognized compensation expense, net of estimated forfeitures, related to performance-based share grants. The unamortized compensation expense will be recognized on a straight-line basis, and is expected to be recognized over the remainder of 2012.

As of March 31, 2012, the total unrecognized compensation cost under the Purchase Plan to purchase the Company's common stock was approximately \$0.4 million. The Company will amortize this cost on a straight-line basis over approximately 0.5 years.

Stock compensation expense in the three months ended March 31, 2012 was \$3.0 million; consisting of approximately \$0.9 million related to stock options, \$0.4 million related to performance shares, \$1.4 million related to restricted

stock units and \$0.3 million related to the Purchase Plan.

Stock compensation expense in the three months ended March 31, 2011, was \$2.5 million; consisting of approximately \$1.2 million related to stock options, \$0.3 million related to performance shares, \$0.6 million related to restricted stock units and \$0.3 million related to the Purchase Plan.

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The Company did not grant stock options in the first quarter of 2012 or 2011, and therefore no fair value assumptions were reported for those periods.

The fair value of employees' stock purchase rights under the Purchase Plan was estimated using the Black-Scholes model with the following weighted-average assumptions:

	Three Months Ended	
	March 31,	
	2012	2011
Risk-free interest rates	0.09%	0.17%
Expected volatility rates	48%	37%
Expected dividend yield	0.54%	0.51%
Expected term of purchase right (years)	0.5	0.5
Weighted-average estimated fair value of purchase rights	\$10.42	\$9.40

A summary of stock option activity under the Plans, excluding performance-based shares and restricted stock units, as of March 31, 2012, and changes during the three months then ended, is presented below:

	Shares (in thousands)	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Outstanding at January 1, 2012	3,557	\$24.01		
Granted	—	—		
Exercised	(215) 19.58		
Forfeited or expired	(3) 21.09		
Outstanding at March 31, 2012	3,339	\$24.29	4.52	\$43,032
Exercisable at March 31, 2012	2,866	\$23.44	3.96	\$39,249
Vested and expected to vest at March 31, 2012	3,322	\$24.24	4.50	\$42,986

The Company did not grant stock options in the three months ended March 31, 2012 and 2011; since 2010 the Company's equity grants to new hires and its annual incentive grants to non-executive employees have been primarily in the form of RSUs. The total intrinsic value of options exercised during the three months ended March 31, 2012 and 2011 was \$3.9 million and \$6.2 million, respectively.

Performance-based Awards

Under the performance-based awards program, the Company grants awards in the first half of the performance year in an amount equal to twice the target number of shares to be issued if the target performance metrics are met. The number of shares that are released at the end of the performance year can range from zero to 200% of the targeted number depending on the Company's performance. The performance metrics of this program are annual targets consisting of net revenue, non-GAAP operating earnings and strategic goals. Each performance-based award granted from the 2007 Plan will reduce the number of shares available for issuance under the 2007 Plan by 2.0 shares.

During the three months ended March 31, 2012, the Company issued approximately 96,000 performance-based awards to employees and executives. As the net revenue and non-GAAP operating earnings are considered performance conditions, expenses associated with these awards, net of estimated forfeitures, are recorded throughout

the year depending on the number of shares expected to be earned based on progress toward the performance targets. The cost of performance-based awards is determined using the fair value of the Company's common stock on the grant date, reduced by the discounted present value of dividends expected to be declared before the awards vest. If the performance conditions are not achieved, no compensation cost is recognized and any previously recognized compensation is reversed.

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

In January 2012, it was determined that the Company had not reached the minimum level of the established performance targets for the performance-based awards granted in 2011. Accordingly, the 93,000 performance-based awards granted in the first quarter of 2011 were canceled.

A summary of performance-based awards outstanding as of March 31, 2012, and activity during the three months then ended, is presented below:

	Shares (in thousands)	Weighted- Average Grant Date Fair Value Per Share	Weighted-Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Outstanding at January 1, 2012	—	\$—		
Granted	96	37.28		
Vested	—	—		
Forfeited or expired	—	—		
Outstanding at March 31, 2012	96	\$37.28	0.75	\$3,556
Vested and expected to vest at March 31, 2012	92		0.75	\$3,409

The weighted-average grant-date fair value per share of performance-based awards granted in the three months ended March 31, 2012 and 2011 was approximately \$37.28 and \$36.90, respectively. The grant date fair value of awards released, which were fully vested, in the three months ended March 31, 2011 was approximately \$3.0 million. There were no performance-based awards released in the three months ended March 31, 2012, as the performance-based awards granted in 2011 were canceled.

Restricted Stock Units (RSUs)

The Company grants restricted stock units to employees under the 2007 Plan. RSUs granted to employees typically vest ratably over a four-year period, and are converted into shares of the Company's common stock upon vesting on a one-for-one basis subject to the employee's continued service to the Company over that period. The cost of the RSUs is determined using the fair value of the Company's common stock on the date of the grant, reduced by the discounted present value of dividends expected to be declared before the awards vest. Compensation is recognized on a straight-line basis over the requisite service period of each grant adjusted for estimated forfeitures. Each RSU award granted from the 2007 plan will reduce the number of shares available for issuance under the 2007 Plan by 2.0 shares. A summary of RSUs outstanding as of March 31, 2012, and changes during the three months then ended, is as follows:

	Shares (in thousands)	Weighted- Average Grant Date Fair Value Per Share	Weighted-Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Outstanding at January 1, 2012	458	\$36.08		
Granted	3	35.12		
Vested	(5)	37.23		
Forfeited or expired	(6)	37.09		
Outstanding at March 31, 2012	450	\$36.04	1.38	\$16,708

Outstanding and expected to vest at March 31, 2012	420	1.37	\$15,596
--	-----	------	----------

The weighted-average grant-date fair value of RSUs awarded in the three months ended March 31, 2012 and 2011 was approximately \$35.12 and \$38.66, respectively. The grant date fair value of awards vested in the three months ended March 31, 2012 and 2011 was approximately \$0.2 million and \$0.1 million, respectively.

4. FAIR VALUE MEASUREMENTS:

16

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

ASC 820-10, Fair Value Measurements, clarifies that fair value is an exit price, representing the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. As such, fair value is a market-based measurement that should be determined based on assumptions that market participants would use in pricing an asset or liability. As a basis for considering such assumptions, ASC 820-10 establishes a three-tier value hierarchy, which prioritizes the inputs used in measuring fair value as follows: (Level 1) observable inputs such as quoted prices for identical assets in active markets; (Level 2) inputs other than the quoted prices in active markets that are observable either directly or indirectly; and (Level 3) unobservable inputs in which there is little or no market data, which requires the Company to develop its own assumptions. This hierarchy requires the Company to use observable market data, when available, and to minimize the use of unobservable inputs when determining fair value.

The Company's cash and investment instruments are classified within Level 1 or Level 2 of the fair-value hierarchy because they are valued using quoted market prices, broker or dealer quotations, or alternative pricing sources with reasonable levels of price transparency. The type of instrument valued based on quoted market prices in active markets primarily includes money market securities. This type of instrument is generally classified within Level 1 of the fair-value hierarchy. The types of instruments valued based on other observable inputs (Level 2 of the fair-value hierarchy) include investment-grade corporate bonds and government, state, municipal and provincial obligations. Such types of investments are valued by using a multi-dimensional relational model, the inputs, when available, are primarily benchmark yields, reported trades, broker/dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers, and reference data including market research publications. In the first quarter of 2012, the Company changed its investment policy to allow the sale of long-term and short-term investments prior to their stated maturity date. The Company principally holds securities until maturity; however, they may be sold under certain circumstances, including, but not limited to, the funding of acquisitions and other strategic investments. As a result of this change in policy the Company classified its investment portfolio as available-for-sale as opposed to held-to-maturity as of March 31, 2012. The Company's investments classified as Level 1 and Level 2 are available-for-sale investments, and were recorded at fair market value.

The fair value hierarchy of the Company's marketable securities at March 31, 2012 and December 31, 2011, was as follows (in thousands):

Description	Fair Value Measurement at March 31, 2012		
	March 31, 2012	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)
Commercial paper	\$16,674	\$—	\$16,674
Money market funds	29,658	29,658	—
Certificates of deposit	10,001	—	10,001
Corporate securities	56,854	—	56,854
Total	\$113,187	\$29,658	\$83,529

Description	Fair Value Measurement at December 31, 2011		
	December 31, 2011	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)
Commercial paper	\$9,849	\$—	\$9,849
Money market funds	30,190	30,190	—

Edgar Filing: POWER INTEGRATIONS INC - Form 10-Q

Certificates of deposit	10,000	—	10,000
Corporate securities	62,940	—	62,940
Total	\$112,979	\$30,190	\$82,789

The Company did not transfer any investments between Level 1, Level 2 or Level 3 of the fair-value hierarchy in the three months ended March 31, 2012 and the twelve months ended December 31, 2011.

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

On October 22, 2010, the Company entered into an agreement with SemiSouth Laboratories, as amended, pursuant to which the Company may be obligated to acquire SemiSouth if SemiSouth meets certain financial performance conditions on or before December 31, 2013. At March 31, 2012, the Company determined the fair value of this potential obligation to be zero. The Company developed its own assumptions using Level 2 inputs in its fair-market valuation using a market approach valuation technique to determine the fair value of this obligation. The Company updates the estimated fair value of this potential obligation quarterly. Any changes are recorded in its unaudited condensed consolidated statements of income. In March 2012, in consideration for the loan agreement discussed below, the Company entered into an amended agreement with SemiSouth which established a maximum purchase price related to both the Company's option to acquire SemiSouth ("Purchase Option") and its potential obligation to acquire SemiSouth (as discussed above). The Company used Level 3 inputs in its fair-market valuation utilizing the income-approach valuation technique. The Company prepared a discounted cash flow analysis using the following unobservable inputs: weighted average cost of capital, long-term revenue growth, control premium, and discount for lack of marketability. The Company then used the Black-Scholes option pricing model to determine the fair value of the Company's purchase option to be approximately \$6.2 million. The Company's valuation technique derived inputs principally from comparable company market data (i.e., correlation values). The Company considers this to be a Level 3 investment as there was no specific market data for this instrument or similar instruments. The Company has not elected the fair value option for this purchase option, under ASC 825. See Note 15, Investment in Third Party, below for further details on the valuation method used.

In March 2012 the Company loaned SemiSouth \$18.0 million, and in exchange the Company was issued a promissory note and received the modification discussed above to establish a maximum price under the Purchase Option. The note has been classified as Level 3 in the fair-value hierarchy, as there was no market data for this instrument. The estimated fair value of the note was approximately \$12.0 million at March 31, 2012, consisting of the promissory note of \$18.0 million, net of the of the unamortized interest discount related to the \$6.2 million purchase option (see Note 15, Investment in Third Party, below for further details on the SemiSouth loan). The fair value was estimated by calculating the present value of cash flows using a market discount rate for similar investments. The Company intends to hold the note to maturity, which occurs in March 2014. The following table presents the changes in Level 3 investments for the three months ended March 31, 2012, for investments that are measured at fair value on a recurring basis (in thousands):

	Fair Value Measurement Using Significant Unobservable Inputs (Level 3) Note Receivable
Beginning balance at January 1, 2012	\$—
Purchases and issuances	11,965
Settlements	—
Ending balance at March 31, 2012	\$ 11,965

5. INVENTORIES:

Inventories (which consist of costs associated with the purchases of wafers from offshore foundries and of packaged components from offshore assembly manufacturers, as well as internal labor and overhead associated with the testing of both wafers and packaged components) are stated at the lower of cost (first-in, first-out) or market. Provisions, when required, are made to reduce excess and obsolete inventories to their estimated net realizable values. Inventories consist of the following (in thousands):

	March 31, 2012	December 31, 2011
--	-------------------	----------------------

Edgar Filing: POWER INTEGRATIONS INC - Form 10-Q

Raw materials	\$9,323	\$12,389
Work-in-process	7,930	7,841
Finished goods	25,598	31,780
Total	\$42,851	\$52,010

6. GOODWILL AND INTANGIBLE ASSETS:

The carrying amount of goodwill was \$14.8 million as of March 31, 2012 and December 31, 2011.

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Intangible assets consist primarily of acquired licenses, in-process research and development and patent rights, and are reported net of accumulated amortization. The Company amortizes the cost of all intangible assets over the shorter of the estimated useful life or the term of the acquired license or patent rights, which range from five to ten years, with the exception of \$4.7 million of in-process research and development which will be amortized once the development is completed and products are available for sale. The Company does not expect the amortization for its in-process research and development to begin in 2012. Amortization for acquired intangible assets was approximately \$0.2 million and \$0.2 million in the three months ended March 31, 2012 and March 31, 2011, respectively. The Company does not believe there is any significant residual value associated with the following intangible assets:

	March 31, 2012			December 31, 2011		
	Gross	Accumulated Amortization	Net	Gross	Accumulated Amortization	Net
	(in thousands)					
In-process research and development	\$4,690	\$—	\$4,690	\$4,690	\$—	\$4,690
Technology licenses	3,000	(1,800)) 1,200	3,000	(1,725)) 1,275
Patent rights	1,949	(1,949)) —	1,949	(1,949)) —
Developed technology	2,920	(915)) 2,005	2,920	(829)) 2,091
Customer relationships	910	(142)) 768	910	(114)) 796
Other intangibles	37	(37)) —	37	(37)) —
Total intangible assets	\$13,506	\$(4,843)) \$8,663	\$13,506	\$(4,654)) \$8,852

The estimated future amortization expense related to intangible assets at March 31, 2012 is as follows:

Fiscal Year	Estimated Amortization (in thousands)
2012 (remaining 9 months)	\$566
2013	755
2014	755
2015	592
2016	367
Thereafter	938
Total (1)	\$3,973

(1) The total above excludes \$4.7 million of in-process research and development which will be amortized upon completion of development over the estimated useful life of the technology.

7. SIGNIFICANT CUSTOMERS AND EXPORT SALES:

Segment Reporting

The Company is organized and operates as one reportable segment, the design, development, manufacture and marketing of proprietary, high-voltage, analog integrated circuits for use primarily in the AC-DC power conversion market. The Company's chief operating decision maker, the Chief Executive Officer, reviews financial information presented on a consolidated basis for purposes of making operating decisions and assessing financial performance.

Customer Concentration

Ten customers accounted for approximately 66% and 67% of net revenues for the three months ended March 31, 2012 and March 31, 2011, respectively. A significant portion of these revenues are attributable to sales of the Company's products to distributors of electronic components. These distributors sell the Company's products to a broad, diverse range of end users, including OEMs and merchant power supply manufacturers.

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The following customers accounted for 10% or more of total net revenues:

Customer	Three Months Ended			
	March 31,			
	2012		2011	
A	20	%	19	%
B	12	%	12	%

Customers A and B are distributors of the Company's products. No other customers accounted for 10% or more of the Company's net revenues in those periods.

Concentration of Credit Risk

Financial instruments that potentially subject the Company to concentrations of credit risk consist principally of cash investments, trade receivables, the Company's note from SemiSouth and the Company's lease line of credit to SemiSouth. The Company has cash investment policies that limit cash investments to low-risk investments. With respect to the Company's agreements with SemiSouth, the Company monitors SemiSouth's credit quality on an ongoing basis. If the credit worthiness of SemiSouth diminishes, the Company will establish a specific reserve against the lease line receivable and / or note receivable. With respect to trade receivables, the Company performs ongoing evaluations of its customers' financial conditions and requires letters of credit whenever deemed necessary.

Additionally, the Company establishes an allowance for doubtful accounts based upon factors surrounding the credit risk of specific customers, historical trends related to past write-offs and other relevant information. Account balances are charged off against the allowance after all means of collection have been exhausted and the potential for recovery is considered remote. The Company does not have any off-balance-sheet credit exposure related to its customers. As of March 31, 2012 and December 31, 2011, 78% and 79%, respectively, of accounts receivable were concentrated with the Company's top 10 customers.

The following customers represented 10% or more of accounts receivable:

Customer	March 31,		December 31,	
	2012		2011	
A	26	%	36	%
B	18	%	10	%

Customers A and B are distributors of the Company's products. No other customers accounted for 10% or more of the Company's accounts receivable in these periods.

International Sales

The Company markets its products through its sales personnel and a worldwide network of distributors. As a percentage of total net revenues, international sales, which consist of domestic and foreign sales to distributors and direct customers outside of the Americas, comprise the following:

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

	Three Months Ended		
	March 31,		
	2012	2011	
Hong Kong/China	42	% 34	%
Taiwan	17	% 24	%
Korea	15	% 17	%
Western Europe (excluding Germany)	11	% 10	%
Japan	6	% 6	%
Singapore	2	% 3	%
Germany	1	% 1	%
Other	2	% 1	%
Total foreign revenue	96	% 96	%

The remainder of the Company's sales are to customers within the Americas, primarily located in the United States.

Product Sales

Approximately 97% to 99% of the Company's sales in the three months ended March 31, 2012 and 2011, respectively, were from its three primary families of low-power AC-DC power-conversion products. Approximately 1% to 3% of the Company's sales came from other product families.

Revenue mix by product family for the three months ended March 31, 2012 and 2011 was as follows:

Product Family	Three Months Ended		
	March 31,		
	2012	2011	
LinkSwitch	41	% 40	%
TinySwitch	33	% 35	%
TOPSwitch	23	% 23	%
Other	3	% 2	%

8. EARNINGS PER SHARE:

Basic earnings per share are calculated by dividing net income by the weighted-average shares of common stock outstanding during the period. Diluted earnings per share are calculated by dividing net income by the weighted-average shares of common stock and dilutive common equivalent shares outstanding during the period. Dilutive common equivalent shares included in this calculation consist of dilutive shares issuable upon the assumed exercise of outstanding common stock options, the assumed vesting of outstanding restricted stock units and performance based awards, and the assumed issuance of awards under the stock purchase plan, as computed using the treasury stock method.

A summary of the earnings per share calculation is as follows (in thousands, except per share amounts):

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

	Three Months Ended March 31,	
	2012	2011
Basic earnings per share:		
Net income	\$7,461	\$9,854
Weighted-average common shares	28,227	28,628
Basic earnings per share	\$0.26	\$0.34
Diluted earnings per share (1):		
Net income	\$7,461	\$9,854
Weighted-average common shares	28,227	28,628
Effect of dilutive securities:		
Employee stock plans	1,208	1,559
Diluted weighted-average common shares	29,435	30,187
Diluted earnings per share	\$0.25	\$0.33

(1) The Company includes the shares underlying performance-based awards in the calculation of diluted earnings per share when they become contingently issuable per ASC 260-10, Earnings per Share and excludes such shares when they are not contingently issuable. The Company has excluded all performance-based awards underlying the fiscal 2012 and 2011 awards as those shares were not contingently issuable as of the end of the period.

Approximately 297,531 shares and 210,044 shares attributable to stock-based awards for the three months ended March 31, 2012 and 2011, respectively, were not included in the computation of diluted earnings per share for the periods then ended because they were determined to be anti-dilutive.

9. PROVISION FOR INCOME TAXES:

The Company accounts for income taxes under the provisions of ASC 740. Under the provisions of ASC 740, deferred tax assets and liabilities are recognized based on the differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, utilizing the tax rates that are expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled.

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. Management considers the scheduled reversal of deferred tax liabilities and projected future taxable income. The Company limits the deferred tax assets recognized related to certain highly-paid officers of the Company to amounts that it estimates will be deductible in future periods based upon the provisions of the Internal Revenue Code Section 162(m). In the event that the Company determines, based on available evidence and management judgment, that all or part of the net deferred tax assets will not be realized in the future, the Company would record a valuation allowance in the period the determination is made. In addition, the calculation of tax liabilities involves significant judgment in estimating the impact of uncertainties in the application of complex tax laws. Resolution of these uncertainties in a manner inconsistent with the Company's expectations could have a material impact on its results of operations and financial position.

As of March 31, 2012, the Company continues to maintain a valuation allowance on a portion of its California deferred tax assets as the Company believes that it is not more likely than not that the deferred tax assets will be fully

realized. The Company also maintains a valuation allowance with respect to certain of its deferred tax assets relating primarily to tax credits in certain non-U.S. jurisdictions.

Income tax expense includes a provision for federal, state and foreign taxes based on the annual estimated effective tax rate applicable to the Company and its subsidiaries, adjusted for certain discrete items which are fully recognized in the period they occur. The Company's effective tax rates for the three months ended March 31, 2012 was 20.1% . The difference between the expected statutory rate of 35% and the Company's effective tax rate for the three months ended March 31, 2012 was primarily due to the beneficial impact of the geographic distribution of the Company's world-wide earnings. The

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

difference between the expected statutory rate of 35% and the Company's effective tax rate of 18.7% for the three months ended March 31, 2011, was primarily due to the beneficial impact of the geographic distribution of the Company's world-wide earnings and the beneficial impact of the research and experimentation tax credit.

Although the Company files U.S. federal, U.S. state, and foreign tax returns, its major tax jurisdiction is the U.S. In the quarter ended March 31, 2011, the IRS informed the Company that the IRS intends to propose material adjustments to the Company's taxable income for fiscal years 2003 through 2006 related to the Company's intercompany research and development cost-sharing arrangement and related issues. In December 2011, the Company received an addendum to the notice of proposed adjustments from the IRS related to the Company's intercompany research and development cost sharing arrangement. The Company believes that the IRS position is without merit and intends to defend its tax return position vigorously. The fiscal years 2007 through 2009 are also under audit by the IRS.

Determining the consolidated provision for income tax expense, income tax liabilities and deferred tax assets and liabilities involves judgment. The Company calculates and provides for income taxes in each of the tax jurisdictions in which it operates, which involves estimating current tax exposures as well as making judgments regarding the recoverability of deferred tax assets in each jurisdiction. The estimates used could differ from actual results, which may have a significant impact on operating results in future periods.

10. INDEMNIFICATIONS:

The Company sells products to its distributors under contracts, collectively referred to as Distributor Sales Agreements ("DSA"). Each DSA contains the relevant terms of the contractual arrangement with the distributor, and generally includes certain provisions for indemnifying the distributor against losses, expenses, and liabilities from damages that may be awarded against the distributor in the event the Company's products are found to infringe upon a patent, copyright, trademark, or other proprietary right of a third party ("Customer Indemnification"). The DSA generally limits the scope of and remedies for the Customer Indemnification obligations in a variety of industry-standard respects, including, but not limited to, limitations based on time and geography, and a right to replace an infringing product. The Company also, from time to time, has granted a specific indemnification right to individual customers.

The Company believes its internal development processes and other policies and practices limit its exposure related to such indemnifications. In addition, the Company requires its employees to sign a proprietary information and inventions agreement, which assigns the rights to its employees' development work to the Company. To date, the Company has not had to reimburse any of its distributors or customers for any losses related to these indemnifications and no material claims were outstanding as of March 31, 2012. For several reasons, including the lack of prior indemnification claims and the lack of a monetary liability limit for certain infringement cases, the Company cannot determine the maximum amount of potential future payments, if any, related to such indemnifications.

11. COMMITMENTS:

Supplier Agreements

The Company purchases wafers through purchase orders from its foundries. All but one of the Company's wafer agreements were executed in U.S. currency. Until June 2011, this one foundry required wafer purchases to be in Japanese yen; however, the purchase price within this agreement was fixed at a base rate and allowed for some sharing of the impact of exchange rate fluctuations from the base rate. The currency fluctuation experienced between the time

invoices were submitted to the Company until the time the yen was purchased and remitted to the supplier was a financial responsibility of the Company. The Company accounted for the gain or loss related to the payment of these transactions as part of other income or expense. The Company has renegotiated its supply agreement with this foundry to purchase wafers in U.S. currency.

Two of the Company's major suppliers have wafer supply agreements based in U.S. dollars; however, the agreements with these foundries also allow for mutual sharing of the impact of the exchange rate fluctuation between Japanese yen and the U.S. dollar. Each year, the Company's management and these suppliers review and negotiate pricing; the negotiated pricing is denominated in U.S. dollars but is subject to contractual exchange rate provisions. The fluctuation in the exchange rate is shared equally between the Company and each of these suppliers.

12. LEGAL PROCEEDINGS AND CONTINGENCIES:

23

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

From time to time in the ordinary course of business, the Company becomes involved in lawsuits, or customers and distributors may make claims against the Company. In accordance with ASC 450-10, the Company makes a provision for a liability when it is both probable that a liability has been incurred and the amount of the loss can be reasonably estimated.

On October 20, 2004, the Company filed a complaint against Fairchild Semiconductor International, Inc. and Fairchild Semiconductor Corporation (referred to collectively as "Fairchild") in the United States District Court for the District of Delaware. In its complaint, the Company alleged that Fairchild has and is infringing four of Power Integrations' patents pertaining to PWM integrated circuit devices. Fairchild denied infringement and asked for a declaration from the court that it does not infringe any Power Integration patent and that the patents are invalid. The Court issued a claim construction order on March 31, 2006 which was favorable to the Company. The Court set a first trial on the issues of infringement, willfulness and damages for October 2, 2006. At the close of the first trial, on October 10, 2006, the jury returned a verdict in favor of the Company finding all asserted claims of all four patents-in-suit to be willfully infringed by Fairchild and awarding \$34.0 million in damages. Although the jury awarded damages, at this stage of the proceedings the Company cannot state the amount, if any, which it might ultimately recover from Fairchild, and no benefits have been recorded in the Company's consolidated financial statements as a result of the damages award. Fairchild also raised defenses contending that the asserted patents are invalid or unenforceable, and the court held a second trial on these issues beginning on September 17, 2007. On September 21, 2007, the jury returned a verdict in the Company's favor, affirming the validity of the asserted claims of all four patents-in-suit. Fairchild submitted further materials on the issue of enforceability along with various other post-trial motions, and the Company filed post-trial motions seeking a permanent injunction and increased damages and attorneys' fees, among other things. On September 24, 2008, the Court denied Fairchild's motion regarding enforceability and ruled that all four patents are enforceable. On December 12, 2008, the Court ruled on the remaining post-trial motions, including granting a permanent injunction, reducing the damages award to \$6.1 million, granting Fairchild a new trial on the issue of willful infringement in view of an intervening change in the law, and denying the Company's motion for increased damages and attorneys' fees with leave to renew the motion after the resolution of the issue of willful infringement. On December 22, 2008, at Fairchild's request, the Court temporarily stayed the permanent injunction for 90 days to permit Fairchild to petition the Federal Circuit Court of Appeals for a further stay. On January 12, 2009, Fairchild filed a notice of appeal challenging the Court's refusal to enter a more permanent stay of the injunction, and Fairchild filed additional motions requesting that both the Federal Circuit and the District Court extend the stay of injunction. The District Court temporarily extended the stay pending the Federal Circuit ruling on Fairchild's pending motion, but the Federal Circuit dismissed Fairchild's appeal and denied its motion on May 5, 2009, and the District Court issued an order on May 13, 2009 confirming the reinstatement of the permanent injunction as originally entered in December 2008. On June 22, 2009, the Court held a brief bench re-trial on the issue of willful infringement, and the parties completed post-trial briefing on the issue of willfulness shortly thereafter. On July 22, 2010, the Court found that Fairchild willfully infringed all four of the asserted patents. The Court also invited briefing on enhanced damages and attorneys' fees, and Fairchild filed a motion requesting that the Court amend its findings regarding willfulness. On January 18, 2011, the Court denied Fairchild's request to amend the findings regarding Fairchild's willful infringement and doubled the damages award against Fairchild but declined to award attorneys' fees. On February 3, 2011, the Court entered final judgment in favor of the Company for a total damages award of \$12.9 million. Fairchild filed a notice of appeal challenging the final judgment and a number of the underlying rulings, and the Company filed a cross-appeal seeking to increase the damages award. Briefing on the appeal is complete, and the appeal was argued on January 11, 2012. A ruling is expected later this year.

On May 9, 2005, the Company filed a Complaint with the U.S. International Trade Commission ("ITC") under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. section 1337 against System General ("SG"). The Company filed a

supplement to the complaint on May 24, 2005. The Company alleged infringement of its patents pertaining to pulse width modulation (“PWM”) integrated circuit devices produced by SG, which are used in power conversion applications such as power supplies for computer monitors. The Commission instituted an investigation on June 8, 2005 in response to the Company's complaint. SG filed a response to the ITC complaint asserting that the patents-in-suit were invalid and not infringed. The Company subsequently and voluntarily narrowed the number of patents and claims in suit, which proceeded to a hearing. The hearing on the investigation was held before the Administrative Law Judge (“ALJ”) from January 18 to January 24, 2006. Post-hearing briefs were submitted and briefing concluded February 24, 2006. The ALJ's initial determination was issued on May 15, 2006. The ALJ found all remaining asserted claims valid and infringed, and recommended the exclusion of the infringing products as well as certain downstream products that contain the infringing products. After further briefing, on June 30, 2006 the Commission decided not to review the initial determination on liability, but did invite briefs on remedy, bonding and the public interest. On August 11, 2006 the Commission issued an order excluding from entry into the United States the infringing SG PWM chips, and any LCD computer monitors, AC printer adapters and sample/demonstration circuit boards containing an infringing SG chip. The U.S. Customs Service is authorized

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

to enforce the exclusion order. On October 11, 2006, the presidential review period expired without any action from the President, and the ITC exclusion order is now in full effect. SG appealed the ITC decision, and on November 19, 2007, the Federal Circuit affirmed the ITC's findings in all respects. On October 27, 2008, SG filed a petition to modify the exclusion order in view of a recent Federal Circuit opinion in an unrelated case, and the Company responded to oppose any modification, but the Commission modified the exclusion order on February 27, 2009. Nevertheless, the exclusion order still prohibits SG and related entities from importing the infringing SG chips and any LCD computer monitors, AC printer adapters, and sample/demonstration circuit boards containing an infringing SG chip.

On May 23, 2008, the Company filed a complaint against Fairchild Semiconductor International, Inc., Fairchild Semiconductor Corporation, and Fairchild's wholly-owned subsidiary System General Corporation in the United States District Court for the District of Delaware. In its complaint, the Company alleged that Fairchild has infringed and is infringing three patents pertaining to power supply controller integrated circuit devices. Fairchild answered the Company's complaint on November 7, 2008, denying infringement and asking for a declaration from the Court that it does not infringe any Power Integrations patent and that the patents are invalid and unenforceable. Fairchild's answer also included counterclaims accusing the Company of infringing three patents pertaining to primary side power conversion integrated circuit devices. Fairchild had earlier brought these same claims in a separate suit against the Company, also in Delaware, which Fairchild dismissed in favor of adding its claims to the Company's already pending suit against Fairchild. The Company has answered Fairchild's counterclaims, denying infringement and asking for a declaration from the Court that it does not infringe any Fairchild patent and that the Fairchild patents are invalid. Fairchild also filed a motion to stay the case, but the Court denied that motion on December 19, 2008. On March 5, 2009, Fairchild filed a motion for summary judgment to preclude any recovery for post-verdict sales of parts found to infringe in the parties' other ongoing litigation, described above, and the Company filed its opposition and a cross-motion to preclude Fairchild from re-litigating the issues of infringement and damages for those same products. On June 26, 2009, the Court held a hearing on the parties' motions, and on July 9, 2009 the Court issued an order denying the parties' motions but staying proceedings with respect to the products that were found to infringe and which are subject to the injunction in the other Delaware case between the parties pending the entry of final judgment in that case; the remainder of the case is proceeding. On December 18, 2009, the Court issued an order construing certain terms in the asserted claims of the Company's and Fairchild's patents in suit. Following the Court's ruling on claim construction, Fairchild withdrew its claim related to one of its patents and significantly reduced the number of claims asserted for the remaining two patents. The parties thereafter filed and argued a number of motions for summary judgment, and the Court denied the majority of the parties' motions but granted the Company's motion to preclude Fairchild from re-arguing validity positions that were rejected in the prior case between the parties. Because the assigned Judge retired at the end of July 2010, the case was re-assigned to a different Judge, and the Court vacated the trial schedule and had the parties provide their input on the appropriate course of action. The Court thereafter set a trial schedule with the jury trial on infringement and validity to begin in July 2011. On February 10, 2011, the Court issued an order maintaining the stay with respect to the products that were found to infringe and which are subject to the injunction in the other Delaware case pending the appeal in that case. On April 18, 2011, the Court rescheduled the trial to begin in January 2012, and on June 2, 2011 the Court moved the trial date to permit the parties to address another patent the Company has accused Fairchild of infringing. Following a trial in April 2012, the jury returned a verdict finding that Fairchild infringes two of the Company's patents, that Fairchild has induced others to infringe the Company's patents, and also upheld the validity of the infringed patents. Of the two remaining counterclaim patents Fairchild asserted in the case, one was found not to be infringed, but the jury found the second patent to be infringed by a limited number of the Company's products, although the jury further found the Company did not induce infringement by any customers, including customers outside the United States. The Company is challenging the validity and enforceability of that patent in post-trial proceedings, issues to be decided by the judge overseeing the case. Nevertheless, the Company estimates that even if the verdict on Fairchild's patent were ultimately upheld, the

sales potentially impacted up to only about 0.1% of the Company's revenues. The Company will also seek an injunction preventing further infringement of its own patents and is seeking financial damages, as well as enhanced damages for willful infringement, issues to be decided in separate proceedings at a later date.

On June 28, 2004, the Company filed a complaint for patent infringement in the U.S. District Court, Northern District of California, against SG Corporation, a Taiwanese company, and its U.S. subsidiary. The Company's complaint alleged that certain integrated circuits produced by SG infringed and continue to infringe certain of its patents. On June 10, 2005, in response to the initiation of the International Trade Commission (ITC) investigation discussed above, the District Court stayed all proceedings. Subsequent to the completion of the ITC proceedings, the District Court temporarily lifted the stay and scheduled a case management conference. On December 6, 2006, SG filed a notice of appeal of the ITC decision as discussed above. In response, and by agreement of the parties, the District Court vacated the scheduled case management

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

conference and renewed the stay of proceedings pending the outcome of the Federal Circuit appeal of the ITC determination. On November 19, 2007, the Federal Circuit affirmed the ITC's findings in all respects, and SG did not file a petition for review. The parties subsequently filed a motion to dismiss the District Court case without prejudice. On November 4, 2009, the Company re-filed its complaint for patent infringement against SG and its parent corporations, Fairchild Semiconductor International, Inc. and Fairchild Semiconductor Corporation, to address their continued infringement of patents at issue in the original suit that recently emerged from SG requested reexamination proceedings before the U.S. Patent and Trademark Office (USPTO). The Company seeks, among other things, an order enjoining Fairchild and SG from infringing the Company's patents and an award of damages resulting from the alleged infringement. Fairchild has denied infringement and asked for a declaration from the Court that it does not infringe any Power Integrations patent, that the patents are invalid, and that one of the two patents now at issue in the case is unenforceable. On May 5, 2010, Fairchild and SG filed an amended answer including counterclaims accusing the Company of infringing two patents; the Company contests these new claims vigorously, and since that time Fairchild has withdrawn its claim for infringement of one of the patents it asserted against the Company, leaving just one Fairchild patent in the case. The Court held a claim construction hearing on March 24, 2011 and issued a first claim construction order regarding the Company's asserted patents on July 13, 2011 and a second claim construction order regarding Fairchild's asserted patent on August 30, 2011. Discovery is currently under way.

In February 2010, Fairchild and System General ("SG") filed suits for patent infringement against the Company, Power Integrations Netherlands B.V., and representative offices of Power Integrations Netherlands in Shanghai and Shenzhen with the Suzhou Intermediate Court in the People's Republic of China. The suits assert four Chinese patents and seek an injunction and damages of approximately \$19.0 million. Power Integrations Netherlands filed invalidation proceedings for all four asserted SG patents in the People's Republic of China Patent Reexamination Board (PRB) of the State Intellectual Property Office (SIPO), and all four challenges were accepted by the PRB, with hearings conducted in September 2010. Early this January, the Company received rulings from the PRB invalidating the majority of the claims Fairchild asserted in litigation. The Suzhou Court thereafter conducted evidentiary hearings, and the parties are following up, with no trial date set at this time. The Company believes the Fairchild and SG claims discussed above are without merit and intends to contest them vigorously.

On July 11, 2011, the Company filed a complaint in the U.S. District Court, District of Columbia, against David Kappos in his capacity as Director of the United States Patent and Trademark Office ("PTO") as part of the ongoing reexamination proceedings related to one of the patents asserted against Fairchild and SG in the Delaware litigation described above. The Company filed a motion for summary judgment on a preliminary jurisdictional issue, and the PTO filed a cross-motion to dismiss on this same issue; briefing on these motions is now complete, with a ruling expected in the coming months. No schedule has been set for the case.

On May 1, 2012, Fairchild Semiconductor Corporation and Fairchild's wholly-owned subsidiary, System General Corporation (referred to collectively as "Fairchild"), filed a complaint against the Company in the United States District Court for the District of Delaware. In its complaint, Fairchild alleges that the Company has and is infringing four patents pertaining to power conversion integrated circuit devices. The Company has not yet answered Fairchild's complaint.

The Company is unable to predict the outcome of legal proceedings with certainty, and there can be no assurance that Power Integrations will prevail in the above-mentioned unsettled litigations. These litigations, whether or not determined in Power Integrations' favor or settled, will be costly and will divert the efforts and attention of the Company's management and technical personnel from normal business operations, potentially causing a material adverse effect on the business, financial condition and operating results. Currently, the Company is not able to estimate a loss or a range of loss for the ongoing litigation disclosed above, however adverse determinations in

litigation could result in monetary losses, the loss of proprietary rights, subject the Company to significant liabilities, require Power Integrations to seek licenses from third parties or prevent the Company from licensing the technology, any of which could have a material adverse effect on the Company's business, financial condition and operating results.

In the quarter ended March 31, 2011, the IRS informed the Company that the IRS intends to propose material adjustments to the Company's taxable income for the years 2003 through 2006 related to the Company's intercompany research and development cost-sharing arrangement and related issues and in December 2011, the Company received an addendum to the notice of proposed adjustments from the IRS related to the Company's intercompany research and development cost sharing arrangement (refer to Note 9, Provision for Income Tax , for further details). The Company believes that the IRS position is without merit and intends to defend its tax return position vigorously.

13. RECENT ACCOUNTING PRONOUNCEMENTS:

26

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

On January 1, 2012, the Company adopted the following accounting pronouncements:

In May 2011, the Financial Accounting Standards Board (FASB) issued amendments to the FASB Accounting Standard Codification (ASC) relating to fair value measurements, Accounting Standards Update (ASU) 2011-04, Fair Value Measurement, ASC Topic 820. The amendments clarify the application of existing fair value measurement requirements and results in common measurement and disclosure requirements in U.S. GAAP and International Financial Reporting Standards (IFRS). The Company applied these amendments in the first quarter of fiscal 2012.

In June 2011, the FASB issued ASU No. 2011-05, Comprehensive Income (ASC Topic 220). This amendment gives an entity two options to present the total of comprehensive income, the components of net income, and the components of other comprehensive income. An entity can elect to present comprehensive income in either (1) a single continuous statement of comprehensive income, or (2) in two separate but consecutive statements. In both choices, an entity is required to present each component of net income along with total net income, each component of other comprehensive income along with a total for other comprehensive income, and a total amount for comprehensive income. The Company adopted this amendment beginning in the first quarter of 2012.

In September 2011, the FASB issued ASU No. 2011-08, Testing Goodwill for Impairment, (ASC Topic 350). Under the amendments in this ASU, an entity has the option to first assess qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If, after assessing the totality of events or circumstances, an entity determines it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, then performing the two-step impairment test is unnecessary. However, if an entity concludes otherwise, then it is required to perform the first step of the two-step impairment test by calculating the fair value of the reporting unit and comparing the fair value with the carrying amount of the reporting unit. If the carrying amount of a reporting unit exceeds its fair value, then the entity is required to perform the second step of the goodwill impairment test to measure the amount of the impairment loss, if any. Under the amendments in this ASU, an entity also has the option to bypass the qualitative assessment for any reporting unit in any period and proceed directly to performing the first step of the two-step goodwill impairment test. An entity may resume performing the qualitative assessment in any subsequent period.

14. ACQUISITION:

On March 30, 2012, the Company through its subsidiaries entered into a definitive agreement to acquire CT-Concept Technologie AG ("Concept"), a Swiss company, by acquiring all of the outstanding shares of its Swiss parent companies, Concept Beteiligungen AG and CT-Concept Holding AG, for approximately \$115.8 million, net of assumed cash. The Company closed the acquisition on May 1, 2012. Pursuant to the purchase agreement, the purchase price is subject to a net asset value adjustment which will be determined after the closing date, and is limited to a maximum of approximately \$7.7 million. The net asset value adjustment will be paid within approximately six months after May 1, 2012.

Concept produces highly integrated driver systems for insulated-gate bipolar transistors, or IGBT modules, replacing discrete solutions and other alternatives by offering an increased level of integration, reliability and energy efficiency. Concept products are used in power-conversion circuitry for applications ranging up to a gigawatt of output, including industrial motor drives, solar and wind power systems, electric trains and trams, electric cars, and medical equipment. The Company expects to include revenues from Concept principally in its industrial end-market category.

The Company has not made all of the remaining disclosures required by ASC805-10-50-2, Business Combinations, as the acquisition has only recently closed. The Company is therefore currently in the process of completing the purchase accounting for the acquisition.

15. INVESTMENT IN THIRD PARTY:

On October 22, 2010, the Company made a \$7.0 million investment in preferred stock of a privately held company, SemiSouth Laboratories (“SemiSouth”). Also in October 2010, the Company paid \$10.0 million as a prepaid royalty in exchange for the right to use SemiSouth's technology. The Company will amortize the royalty to cost of revenues based on the Company's sales of products incorporating the licensed technology. The Company classified its investment in SemiSouth, with a carrying value of \$7.0 million and prepaid royalty of \$10.0 million within Other Assets in the Company's condensed consolidated balance sheet as of March 31, 2012. The Company does not expect to amortize the prepaid royalty in 2012.

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

In February 2011, the Company entered into an agreement with SemiSouth to provide a lease line for the financing of capital equipment. Under the terms of the agreement, SemiSouth can borrow up to \$8.6 million through January 2013, of which a total of \$8.5 million had been funded as of March 31, 2012. Refer to Note 16, Lease Line to Third Party, for details. The Company included the lease line receivable and deposits on equipment in Other Assets and Prepaid Expenses and Other Current Assets in its consolidated balance sheet at March 31, 2012.

In December 2011, the Company entered into a \$2.5 million lease guaranty agreement (the "Guaranty Agreement") with a third party. In accordance with the terms of the Guaranty Agreement, the Company guaranteed up to \$2.5 million of SemiSouth's obligations under SemiSouth's equipment lease with such third party. The Guaranty Agreement remained in place until Semisouth secured additional financing, which occurred in March 2012, at which time the Guaranty Agreement was terminated.

The Company's 2010 agreement with SemiSouth provides, among other things, that the Company has the option to acquire SemiSouth in the future ("Call Option") and that the Company may be obligated to acquire SemiSouth at a future date if SemiSouth achieves certain financial performance conditions ("Put Option"). The Put and Call Options terminate on the date that is approximately a month following delivery to the Company of SemiSouth's financial statements for the quarter ending December 31, 2013.

The Call Option can be exercised by the Company at a multiple of SemiSouth's annualized net operating profits after tax ("NOPAT") (based on the average of this measure over a period of several months), as defined in the agreement. The multiple is intended to result in an acquisition price equal to the estimated fair value of SemiSouth. The minimum acquisition price would be \$36 million, subject to certain adjustments. Pursuant to an amended agreement entered into in March 2012, the maximum purchase price shall not exceed \$80.0 million.

The Put Option can only be exercised by SemiSouth once certain revenue and profit metrics have been reached. At that time, SemiSouth could obligate the Company to acquire SemiSouth at a multiple of SemiSouth's NOPAT. The multiple is intended to result in an acquisition price equal to the estimated fair value of SemiSouth limited to a maximum of \$80.0 million pursuant to the March 2012 amendment. In order to reach the revenue and profit metrics required to exercise the Put Option, SemiSouth would need to increase its quarterly revenue to approximately 15 times the level of revenues achieved in the first quarter of 2012.

The NOPAT multiple was determined to reflect fair value based on the Market Approach using Level 2 inputs that are derived principally from observable market data by comparing multiples for similar publicly traded companies. Due to the fact that the strike price of the Put Option is continually being adjusted to reflect the changes in the fair value of SemiSouth, the fair value of the Put Option was determined to be zero.

In July 2011, SemiSouth obtained \$15 million of financing through the sale, and concurrent licensing back, of its intellectual property ("IP") with a financing company. In connection with this arrangement, the Company entered into a contingent purchase commitment with the financing company for SemiSouth's IP. The contingent purchase commitment requires the Company to purchase the IP previously owned by SemiSouth from its new owner for \$15 million (plus reimbursement of certain expenses) under certain conditions generally relating to SemiSouth's failure to make certain payments or SemiSouth's insolvency. In this event, the agreement sets forth a process to be followed before the Company's purchase commitment matures. First, the agreement allows the Company to exercise its Call Option for a certain period of time and under certain conditions. If the Company does not initially exercise its Call Option, then SemiSouth can be sold to a third party during a period of time of up to approximately half a year (which period of time may be shortened by the new SemiSouth IP owner) or the Company could still exercise its Call Option. After that period of time elapses, the Company is obligated to purchase the SemiSouth IP for \$15 million (plus reimbursement of certain expenses). The Company provided a \$15 million letter of credit in August 2011 to the

financing company to secure the contingent purchase commitment.

The Company entered into a contract in July 2011 with SemiSouth to act as a sales representative for SemiSouth. The sales representation agreement will allow the Company to earn a fee for its efforts in representing, promoting and soliciting orders for SemiSouth products. The contract can be terminated with or without cause by giving prior written notice to the other party.

In March 2012, the Company loaned SemiSouth \$18.0 million, and in exchange the Company was issued a promissory note. In consideration for the loan the Company obtained an amendment to its 2010 agreement with SemiSouth to

Table of Contents

POWER INTEGRATIONS, INC.

NOTES TO (UNAUDITED) CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

establish a maximum purchase price related to both the Company's option to acquire SemiSouth ("Purchase Option") and its potential obligation to acquire SemiSouth (as discussed above). The Company used Level 3 inputs in its fair-market valuation utilizing the income-approach valuation technique. The Company prepared a discounted cash flow analysis using the following unobservable inputs: weighted average cost of capital, long-term revenue growth, control premium, and discount for lack of marketability. The Company then used a Black-Scholes option pricing model to determine the fair value of the Company's purchase option to be approximately \$6.2 million. The Company's valuation technique derived inputs principally from market data (i.e., correlation values). The Company accounted for the \$18.0 million promissory note in the Other Assets caption in its condensed consolidated balance sheet, net of the \$6.2 million interest discount related to the Purchase Option, of which \$0.2 million was amortized as of March 31, 2012. The interest discount will be amortized to interest income over the life of the promissory note. The amortization of the interest income and the stated interest rate on the promissory note reflect the approximate fair value of the effective interest rate. The Company also recorded the corresponding \$6.2 million value of the Purchase Option in Other Assets in its condensed consolidated balance sheet. The following table reflects the Company's interest income related to its SemiSouth agreements (in thousands):

	Three Months Ended March 31,	
	2012	2011
Interest income on note from SemiSouth	\$24	\$—
Non-cash interest income on note from SemiSouth	157	—
Interest income from SemiSouth lease line	83	21
Total interest income from SemiSouth	\$264	\$21

The Company's investment in SemiSouth is periodically reviewed for other-than-temporary declines in fair value by considering available evidence, including general market conditions, SemiSouth's financial condition, pricing in recent rounds of financing, earnings and cash flow forecasts, recent operational performance and any other readily available market data.

The Company has determined that its investment in SemiSouth, in which the Company holds less than 20% equity interest, is a variable interest entity ("VIE") in which the Company is not the primary beneficiary. The primary factors in the Company's assessment were; (i) SemiSouth's management team and board of directors were solely responsible for all business and financial decisions for SemiSouth and (ii) the Company does not have the ability to direct the activities that significantly impact the economic performance of SemiSouth. The Company accounts for its non-marketable investment in SemiSouth under the cost method.

The Company's maximum exposure to loss as a result of its interest in SemiSouth is limited to the aggregate of the carrying value of its equity investment, up to \$8.6 million for the lease line agreement and \$18.0 million for the loan to SemiSouth. There were no additional future funding commitments to SemiSouth as of March 31, 2012.

16. LEASE LINE TO THIRD PARTY:

In February 2011, the Company entered into an agreement with SemiSouth to provide a lease line for the financing of capital equipment. Under the term of the agreement, SemiSouth can borrow up to \$8.6 million through January 2013. As of March 31, 2012, a total of \$8.5 million had been funded, consisting of: \$8.2 million funded, less payments withheld under this lease arrangement to finance capital equipment commencing in February 2011; and \$0.3 million paid as deposits on equipment which the Company will lease to SemiSouth upon delivery of such equipment. The Company included the lease line receivable and deposits on equipment in Other Assets and Prepaid Expenses and Other Current Assets in its condensed consolidated balance sheet at March 31, 2012. The total lease payments related to the \$8.2 million funded, including interest, will be received over a four-to-eight year term and are reflected in the

table below (in millions):

29

2015	1.2
2016	1.2
Thereafter	3.0
Total	\$8.7

The Company assessed the credit worthiness of SemiSouth at the inception of the lease line, and is monitoring their credit quality on an ongoing basis. If the credit worthiness of SemiSouth diminishes the Company will establish a specific reserve against the lease line receivable at that time.

17. BANK LINE OF CREDIT:

In February 2011, the Company entered into an unsecured credit agreement with a bank (the "Credit Agreement"). Pursuant to the Credit Agreement, the Company can request, from time to time until February 2013, advances in an amount not to exceed an aggregate principal amount of \$50.0 million. On April 2, 2012 the amount available under this credit agreement was increased to \$65.0 million, the proceeds of which can be used for working capital requirements and other general corporate purposes. The agreement also covers advances for commercial letters of credit. At March 31, 2012, the Company had a \$15.0 million outstanding letter of credit in connection with the contingent purchase commitment (referred to in Note 15, Investment in Third Party). The terms of this credit agreement require the Company to remain in compliance with certain financial and other covenants, which the Company is currently in compliance with. As of March 31, 2012 there were no advances drawn against this credit line.

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with the condensed consolidated financial statements and the notes to those statements included elsewhere in this Quarterly Report on Form 10-Q, and with consolidated financial statements and management's discussion and analysis of our financial condition and results of operations in our Annual Report on Form 10-K for the year ended December 31, 2011, filed with the SEC on February 29, 2012. This discussion contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those contained in these forward-looking statements due to a number of factors, including those discussed in Part II, Item 1A-"Risk Factors" and elsewhere in this report.

Overview

We design, develop, manufacture and market high-voltage, analog and mixed-signal integrated circuits, or ICs, and high-voltage diodes for use in electronic power supplies, also known as switched-mode power supplies. Our ICs and diodes are used principally in AC-DC power supplies in a wide variety of end products, primarily in the consumer, communications, computer and industrial electronics markets. For example, our ICs are commonly used in such end products as mobile-phone chargers, desktop computers, home entertainment equipment, appliances, utility meters and LED light bulbs and fixtures.

We believe that our products enable power supplies that are superior to those designed with alternative technologies. We differentiate our ICs through innovation aimed at helping our customers meet the desired performance specifications for their power supplies, including increasingly stringent energy-efficiency requirements, while minimizing complexity, component count, time-to-market and overall system cost. We invest significant resources in research and development in an effort to achieve this differentiation.

While the size of the power-supply market fluctuates with changes in macroeconomic conditions, the market has generally exhibited a modest growth rate over time as growth in the unit volumes of power supplies has largely been offset by reductions in the average selling price of components in this market. Therefore, the growth of our business depends primarily on our penetration of the power supply market, and our success in expanding the addressable market by introducing new products that address a wider range of applications. Our growth strategy includes the following elements:

Increase the penetration of our ICs in the "low-power" AC-DC power supply market. The vast majority of our revenues come from power-supply applications requiring 50 watts of output or less. We continue to introduce more advanced products that make our IC-based solutions more attractive in this market. We have also increased the size of our sales and field-engineering staff considerably in recent years, and we continue to expand our offerings of technical documentation and design-support tools and services in order to help customers use our ICs. These tools and services include our PI Expert™ design software, which we offer free of charge, and our transformer-sample service.

Capitalize on the growing demand for more energy-efficient electronic products and lighting technologies. We believe that energy-efficiency is becoming an increasingly important design criterion for power supplies due largely to the emergence of standards and specifications that encourage, and in some cases mandate, the design of more energy-efficient electronic products. While power supplies built with competing technologies are often unable to meet these standards cost-effectively, power supplies incorporating our ICs are generally able to comply with all known efficiency specifications currently in effect.

Additionally, technological advances combined with regulatory and legislative actions are resulting in the adoption of alternative lighting technologies such as light-emitting diodes, or LED. We believe this presents a significant opportunity for us because our ICs are used in power-supply, or driver, circuitry for high-voltage LED lighting

applications.

Increase the penetration of our products in “high-power” applications. We believe we have developed and acquired new technologies and products that enable us to bring the benefits of highly integrated power supplies to applications ranging from 50 to about 500 watts of output. These include such applications as main power supplies for flat-panel TVs and desktop PCs, as well as power supplies for LED streetlights, game consoles, and notebook computers, among others.

31

Table of Contents

Beginning May 1, 2012, with the completion of our acquisition of CT-Concept Technologie AG (“Concept”), we have expanded our range of addressable power-conversion applications to include power levels up to a gigawatt. Concept produces highly integrated driver systems for IGBT modules, replacing discrete solutions and other alternatives by offering an increased level of integration, reliability and energy efficiency. Concept products are used in power conversion circuitry for industrial motor drives, solar and wind power systems, electric trains and trams, electric cars, and medical equipment.

Our quarterly operating results are difficult to predict and subject to significant fluctuations. We plan our production and inventory levels based on internal forecasts of projected customer demand, which is highly unpredictable and can fluctuate substantially. Customers typically may cancel or reschedule orders on short notice without significant penalty and, conversely, often place orders with very short lead times to delivery. Also, external factors such as global economic conditions and supply-chain dynamics can cause our operating results to be volatile.

Our net revenues were \$71.8 million in the three months ended March 31, 2012, compared to \$76.8 million in the same period of 2011. The decrease was driven by lower sales of our products into the communications, industrial and computer end markets, reflecting demand trends generally observed across the broader semiconductor industry.

Our top ten customers, including distributors that resell our products to OEMs and merchant power supply manufacturers, accounted for 66% of our net revenues in the three months ended March 31, 2012, compared to 67% in the same period in 2011. Our top two customers, both distributors of our products, collectively accounted for approximately 32% of our net revenues in the three months ended March 31, 2012. In the first quarter of 2011, our top two customers, both distributors of our products, collectively accounted for approximately 31% of our net revenues. International sales accounted for 96% of our net revenues in the three months ended March 31, 2012 and in 2011.

Because our industry is intensely price-sensitive, our gross margin (gross profit divided by net revenues) is subject to change based on the relative pricing of solutions that compete with ours. Variations in product and customer mix can also cause our gross margin to fluctuate. Also, because we purchase a large percentage of our silicon wafers from foundries located in Japan, our gross margin is influenced by fluctuations in the exchange rate between the U.S. dollar and the Japanese yen. Changes in the prices of raw materials used in our products, such as copper and gold, can also affect our gross margin. Although our wafer-fabrication and assembly operations are outsourced, as are most of our test operations, a portion of our production costs are fixed in nature. As a result, our unit costs and gross profit margin are impacted by the volume of units we produce.

Our gross margin was 48% of net revenues in the three months ended March 31, 2012, compared with 47% of net revenues in the corresponding period of 2011. We have negotiated more favorable wafer pricing with our foundries which resulted in a decrease in the cost of silicon wafers purchased from our wafer fabrication foundries in the first quarter of 2012 compared to the same period of 2011. This factor was partially offset by higher overhead costs resulting from lower production volumes in the first quarter of 2012 compared to the same period in 2011. While we cannot necessarily predict the future direction of our gross margin because many of the factors influencing it are outside of our control, we expect our gross margin to improve in the second quarter of 2012 relative to the first quarter as a result of further product-cost improvements.

Total operating expenses in the three months ended March 31, 2012 were \$25.9 million, compared to \$24.7 million in the same period in 2011. The increase was driven primarily by increased research and development expenses, primarily payroll and related expenses due to increased headcount and increased product development expenses. In addition, general and administrative expenses increased in connection with our acquisition of Concept. (Refer to Note 14, Acquisition, in our Notes to Condensed Consolidated Financial Statements for recent activity.)

Critical Accounting Policies and Estimates

The preparation of financial statements and related disclosures in conformity with accounting principles generally accepted in the United States of America (“U.S. GAAP”) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. On an ongoing basis, we evaluate our estimates, including those listed below. We base our estimates on historical facts and various other assumptions that we believe to be reasonable at the time the estimates are made. Actual results could differ from those estimates.

32

Table of Contents

Our critical accounting policies are as follows:

- revenue recognition;
- stock-based compensation;
- estimating write-downs for excess and obsolete inventory;
- income taxes; and
- goodwill and intangible assets.

Our critical accounting policies are important to the portrayal of our financial condition and results of operations, and require us to make judgments and estimates about matters that are inherently uncertain. A brief description of these critical accounting policies is set forth below. For more information regarding our accounting policies, see Note 2, Summary of Significant Accounting Policies, in our Notes to Condensed Consolidated Financial Statements.

Revenue recognition

Product revenues consist of sales to original equipment manufacturers, or OEMs, merchant power supply manufacturers and distributors. Approximately 71% of our net product sales were made to distributors in the first quarter of 2012, and in the twelve months ended December 31, 2011. We apply the provisions of Accounting Standard Codification (“ASC”) 605-10 (“ASC 605-10”) and all related appropriate guidance. Revenue is recognized when all of the following criteria have been met: (1) persuasive evidence of an arrangement exists, (2) delivery has occurred, (3) the price is fixed or determinable, and (4) collectability is reasonably assured. Customer purchase orders are generally used to determine the existence of an arrangement. Delivery is considered to have occurred when title and risk of loss have transferred to our customer. We evaluate whether the price is fixed or determinable based on the payment terms associated with the transaction and whether the sales price is subject to refund or adjustment. With respect to collectability, we perform credit checks for new customers and perform ongoing evaluations of our existing customers' financial condition and requires letters of credit whenever deemed necessary.

Sales to international OEM customers and merchant power supply manufacturers that are shipped from our facility in California are pursuant to Delivered at Frontier, or DAF, shipping terms. As such, title to the product passes to the customer when the shipment reaches the destination country and revenue is recognized upon the arrival of the product in that country. Sales to international OEMs and merchant power supply manufacturers for shipments from our facility outside of the United States are pursuant to EX Works, or EXW, shipping terms, meaning that title to the product transfers to the customer upon shipment from our foreign warehouse. Shipments to OEMs and merchant power supply manufacturers in the Americas are pursuant to Free on Board, or FOB, point of origin shipping terms meaning that title is passed to the customer upon shipment. Revenue is recognized upon title transfer for sales to OEMs and merchant power supply manufacturers, assuming all other criteria for revenue recognition are met.

Sales to distributors are made under terms allowing certain price adjustments and rights of return on our products held by the distributors. As a result of these rights, we defer the recognition of revenue and the costs of revenues derived from sales to distributors until our distributors report that they have sold our products to their customers. Our recognition of such distributor sell-through is based on point of sales reports received from the distributor, at which time the price is no longer subject to adjustment and is fixed, and the products are no longer subject to return to us except pursuant to warranty terms. The gross profit that is deferred upon shipment to the distributor is reflected as “deferred income on sales to distributors” in the accompanying consolidated balance sheets. The total deferred revenue as of March 31, 2012 and December 31, 2011 was approximately \$18.9 million and \$16.7 million, respectively. The total deferred cost as of March 31, 2012 and December 31, 2011 was approximately \$9.5 million and \$8.8 million, respectively.

Frequently, distributors need to sell at a price lower than the standard distribution price in order to win business. At or soon after the distributor invoices its customer, the distributor submits a “ship and debit” price adjustment claim to us to adjust the distributor's cost from the standard price to the pre-approved lower price. After we verify the claim, a credit memo is issued to the distributor for the ship and debit claim. We maintain a reserve for unprocessed claims and future ship and debit price adjustments. The reserve appears as a reduction to accounts receivable in our accompanying consolidated balance sheets. To the extent future ship and debit claims significantly exceed amounts estimated, there could be a material impact on the deferred revenue and deferred margin ultimately recognized. To evaluate the adequacy of our reserves, we analyze historical ship and

Table of Contents

debit payments and levels of inventory in the distributor channels.

Stock-based compensation

We apply the provisions of ASC 718-10, Share-Based Payment. Under the provisions of ASC 718-10, we recognize the fair value of stock-based compensation in financial statements over the requisite service period of the individual grants, which generally equals a four-year vesting period. We use estimates of volatility, expected term, risk-free interest rate, dividend yield and forfeitures in determining the fair value of these awards and the amount of compensation cost to recognize. Changes in these estimates could result in changes to our compensation charges.

Estimating write-downs for excess and obsolete inventory

When evaluating the adequacy of our valuation adjustments for excess and obsolete inventory, we identify excess and obsolete products and also analyze historical usage, forecasted production based on demand forecasts, current economic trends and historical write-offs. This write-down is reflected as a reduction to inventory in the consolidated balance sheets and an increase in cost of revenues. If actual market conditions are less favorable than our assumptions, we may be required to take additional write-downs, which could adversely impact our cost of revenues and operating results.

Income taxes

Income tax expense is an estimate of current income taxes payable or refundable in the current fiscal year based on reported income before income taxes. Deferred income taxes reflect the effect of temporary differences and carry-forwards that are recognized for financial reporting and income tax purposes.

We account for income taxes under the provisions of ASC 740. Under the provisions of ASC 740, deferred tax assets and liabilities are recognized based on the differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, utilizing the tax rates that are expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. We recognize valuation allowances to reduce any deferred tax assets to the amount that we estimate will more likely than not be realized based on available evidence and management's judgment. We limit the deferred tax assets recognized related to certain officers' compensation to amounts that we estimate will be deductible in future periods based upon Internal Revenue Code Section 162(m). In the event that we determine, based on available evidence and management judgment, that all or part of the net deferred tax assets will not be realized in the future, we would record a valuation allowance in the period the determination is made. In addition, the calculation of tax liabilities involves significant judgment in estimating the impact of uncertainties in the application of complex tax laws. Resolution of these uncertainties in a manner inconsistent with our expectations could have a material impact on our results of operations and financial position.

As of March 31, 2012, we continue to maintain a valuation allowance on a portion of our California deferred tax assets as we believe that it is not more likely than not that the deferred tax assets will be fully realized. We also maintain a valuation allowance with respect to some of our deferred tax assets relating primarily to tax credits in some non-U.S. jurisdictions.

In the first quarter of 2011, the IRS informed us that it intends to propose material adjustments to our taxable income for fiscal years 2003 through 2006 related to our intercompany research and development cost-sharing arrangement and related issues. In December 2011, we received an addendum to the notice of proposed adjustments from the IRS related to our intercompany research and development cost sharing arrangement. We believe the IRS's position with respect to the proposed adjustment is inconsistent with applicable tax law, and that we have a meritorious defense to

our position. Accordingly, we intend to continue to challenge the IRS's position on this matter vigorously. While we believe the IRS's asserted position on this matter is not supported by applicable law, we have provided reserves for our position in this matter, and we may be required to make payments to the IRS pending resolution. If this matter is litigated and the IRS is able to successfully sustain its position, our results of operations and financial condition could be materially and adversely affected (refer to Note 9, Provision for Income Taxes, in our Notes to Consolidated Financial Statements for further details). Resolution of this matter is not anticipated within the next year.

Goodwill and intangible assets

In accordance with ASC 350-10, Goodwill and Other Intangible Assets, we evaluate goodwill for impairment on an annual basis, or as other indicators of impairment emerge. The provisions of ASC 350-10 require that we perform a two-step impairment test. In the first step, we compare the implied fair value of our single reporting unit to its carrying value, including goodwill. If the fair value of our reporting unit exceeds the carrying amount no impairment adjustment is required. If the

Table of Contents

carrying amount of our reporting unit exceeds the fair value, step two will be completed to measure the amount of goodwill impairment loss, if any exists. If the carrying value of our single reporting unit's goodwill exceeds its implied fair value, then we record an impairment loss equal to the difference, but not in excess of the carrying amount of the goodwill. Under the amendments of this ASC, ASU No. 2011-08, Testing Goodwill for Impairment, beginning in the first quarter of 2012 we have the option to first assess qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If, after assessing the totality of events or circumstances, an entity determines it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, then performing the two-step impairment test is unnecessary. We evaluated goodwill for impairment in the fourth quarter 2011, and concluded that no impairment existed as of December 31, 2011. Additionally, no impairment indicators have been identified during the three months ended March 31, 2012.

ASC 350-10 also requires that intangible assets with estimable useful lives be amortized over their respective estimated useful lives, and reviewed for impairment in accordance with ASC 360-10, Accounting for the Impairment or Disposal of Long-Lived Assets. We review long-lived assets, such as acquired intangibles and property and equipment, for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. We measure recoverability of assets to be held and used by a comparison of the carrying amount of an asset to estimated undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, we recognize an impairment charge by the amount by which the carrying amount of the asset exceeds the fair value of the asset.

Results of Operations

The following table sets forth certain operating data as a percentage of net revenues for the periods indicated.

	Three Months Ended			
	March 31,			
	2012		2011	
Net revenues	100.0	%	100.0	%
Cost of revenues	51.8		52.6	
Gross profit	48.2		47.4	
Operating expenses:				
Research and development	14.8		13.1	
Sales and marketing	11.3		10.7	
General and administrative	9.9		8.4	
Total operating expenses	36.0		32.2	
Income from operations	12.2		15.2	
Other income, net	0.9		0.6	
Income before provision for income taxes	13.1		15.8	
Provision for income taxes	2.6		3.0	
Net income	10.5	%	12.8	%

Comparison of the Three Months Ended March 31, 2012 and 2011

Net revenues. Net revenues consist of revenues from product sales, which are calculated net of returns and allowances. Net revenues for the three months ended March 31, 2012 were \$71.8 million compared with \$76.8 million for the three months ended March 31, 2011, a decrease of approximately 6%. The decrease in revenues was driven primarily by lower sales of our products into the communications, industrial and computer end markets, reflecting

demand trends generally observed across the broader semiconductor industry.

Our net revenue mix by product family and by end market for the three months ended March 31, 2012, compared to the three months ended March 31, 2011, were as follows:

35

Table of Contents

Product Family	Three Months Ended March 31,			
	2012		2011	
LinkSwitch	41	%	40	%
TinySwitch	33	%	35	%
TOPSwitch	23	%	23	%
Other	3	%	2	%

End Market	Three Months Ended March 31,			
	2012		2011	
Consumer	40	%	37	%
Communications	27	%	32	%
Industrial	21	%	20	%
Computer	12	%	11	%

International sales, consisted of sales outside of the Americas based on “ship to” customer locations, were \$68.7 and \$73.5 million in the three months ended March 31, 2012 and 2011, respectively. This represented 96% of net revenues in both the three months ended March 31, 2012 and 2011. Although the power supplies using our products are distributed to end markets worldwide, most of these power supplies are manufactured in Asia. As a result, sales to this region represented 84% of our net revenues for both the three months ended March 31, 2012 and 2011. We expect international sales, and sales to the Asia region in particular, to continue to account for a large portion of our net revenues in the future.

Sales through distributors accounted for 71% and 68% of net revenues in the three months ended March 31, 2012, and 2011, respectively, with direct sales to OEMs and power supply manufactures accounting for the remainder. The following customers accounted for 10% or more of total revenues:

Customer	Three Months Ended March 31,	
	2012	2011
A	20%	19%
B	12%	12%

Customers A and B are distributors of our products. No other customers accounted for 10% or more of our net revenues in those periods.

Gross profit. Gross profit is net revenues less cost of revenues. Our cost of revenues consists primarily of costs associated with the purchase of wafers from our foundries, the assembly, packaging and testing of our products by sub-contractors, product testing performed in our own facility, and overhead associated with the management of our supply chain. Gross margin is gross profit divided by net revenues. The table below compares gross profit and gross margin for the three months ended March 31, 2012 and 2011 (dollars in millions):

	Three Months Ended March 31,	
	2012	2011
Net revenues	\$71.8	\$76.8
Gross profit	\$34.6	\$36.4
Gross margin	48.2%	47.4%

The increase in gross margin for the three months ended March 31, 2012, compared with the same period in the prior year, was due primarily to lower manufacturing costs. We have negotiated more favorable wafer pricing with our foundries for 2012, resulting in a decrease in the cost of silicon wafers purchased from our wafer fabrication foundries in the first quarter of

36

Table of Contents

2012, compared to the same period of 2011. This factor was partially offset by higher overhead costs resulting from lower production volumes in the first quarter of 2012 compared to the same period in 2011.

Research and development expenses. Research and development, or R&D, expenses consist primarily of employee-related expenses including stock-based compensation and expensed material and facility costs associated with the development of new processes and new products. We also record R&D expenses for prototype wafers related to new products until such products are released to production. The table below compares R&D expenses for the three months ended March 31, 2012 and 2011 (dollars in millions):

	Three Months Ended March 31,	
	2012	2011
Net revenues	\$71.8	\$76.8
R&D expenses	\$10.6	\$10.0
R&D expenses as a % of net revenue	14.8%	13.1%

R&D expenses increased in the three months ended March 31, 2012, compared to the same period in 2011, driven primarily by increased payroll and related expenses, including stock-based compensation expense, resulting from increased headcount. Product-development expenses also increased for the three month period ended March 31, 2012, compared to the same period in 2011, due to expenses related to foundry qualifications and ongoing new-product development.

Sales and marketing expenses. Sales and marketing expenses consist primarily of employee-related expenses, including stock-based compensation, commissions to sales representatives, and facilities expenses, including expenses associated with our regional sales and support offices. The table below compares sales and marketing expenses for the three months ended March 31, 2012 and 2011 (dollars in millions):

	Three Months Ended March 31,	
	2012	2011
Net revenues	\$71.8	\$76.8
Sales and marketing expenses	\$8.1	\$8.2
Sales and marketing expenses as a % of net revenue	11.3%	10.7%

The decrease in sales and marketing expenses in the three months ended March 31, 2012 compared to the same period of 2011 was driven primarily by decreased expenses related to marketing materials, partially offset by increased payroll and related expenses, including stock-based compensation expense, and sales infrastructure expenses as a result of increased headcount to expand our international sales force.

General and administrative expenses. General and administrative, or G&A, expenses consist primarily of employee-related expenses, including stock-based compensation expenses for administration, finance, human resources and general management, as well as consulting, professional services, legal and auditing expenses. The table below compares G&A expenses for the three months ended March 31, 2012 and 2011 (dollars in millions):

	Three Months Ended March 31,	
	2012	2011
Net revenues	\$71.8	\$76.8
G&A expenses	\$7.1	\$6.5
G&A expenses as a % of net revenue	9.9%	8.4%

G&A expenses increased in the three months ended March 31, 2012 compared to the prior year. The increase was due primarily to acquisition-related expenses in connection with our agreement to acquire Concept. (Refer to Note 14, Acquisitions, in our Notes to Condensed Consolidated Financial Statements, for details.)

Table of Contents

Other income, net. Other income, net consists primarily of interest income earned on cash and cash equivalents, marketable securities and other investments. The table below compares other income, net for the three months ended March 31, 2012 and 2011 (dollars in millions):

	Three Months Ended March 31,	
	2012	2011
Net revenues	\$71.8	\$76.8
Other income	\$0.6	\$0.4
Other income as a % of net revenue	0.9%	0.6%

Other income, net, increased in the three months ended March 31, 2012, compared to the same period in 2011. The increases were related to interest earned on our \$18.0 million promissory note with SemiSouth (refer to Note 15, Investment in Third Party, in our Notes to Condensed Consolidated Financial Statements, for details), in addition to our lease line to SemiSouth. (Refer to Note 16, Lease Line to Third Party, in our Notes to Condensed Consolidated Financial Statements, for details.)

Provision for income taxes. Provision for income taxes represents federal, state and foreign taxes. The table below compares income tax expenses for the three months ended March 31, 2012 and 2011 (dollars in millions):

	Three Months Ended March 31,	
	2012	2011
Income before provision for income taxes	\$9.3	\$12.1
Provision for income taxes	\$1.9	\$2.3
Effective tax rate	20.1%	18.7%

The difference between the expected statutory rate of 35% and our effective tax rate for the three months ended March 31, 2012, was primarily due to the beneficial impact of the geographic distribution of our world-wide earnings. The difference between the expected statutory rate of 35% and our effective tax rate for the three months ended March 31, 2011, was primarily due to the beneficial impact of the geographic distribution of our world-wide earnings and the beneficial impact of a research and experimentation tax credit.

Liquidity and Capital Resources

As of March 31, 2012, we had \$214.0 million in cash, cash equivalents and marketable securities, an increase of approximately \$1.2 million from \$212.8 million as of December 31, 2011. As of March 31, 2012, and December 31, 2011, we had working capital, defined as current assets less current liabilities of \$248.2 million and \$217.5 million, respectively. The increase in working capital resulted from the reclassification of our long-term marketable securities to short-term in connection with the change in our investment policy; refer to Note 2, Summary of Significant Accounting Policies, in our Notes to Condensed Consolidated Financial Statements, for further details.

In February 2011, we entered into an unsecured credit agreement with a bank, which we refer to as the Credit Agreement. Pursuant to the Credit Agreement, we can request, from time to time until February 2013, advances in an amount not to exceed an aggregate principal amount of \$50.0 million. On April 2, 2012, the amount available under this credit agreement was increased to \$65.0 million, the proceeds of which can be used for working capital requirements and other general corporate purposes. The agreement also covers advances for commercial letters of credit. At March 31, 2012, we had a \$15.0 million outstanding letter of credit in connection with the contingent

purchase commitment (referred to in Note 15, Investment in Third Party). The terms of this credit agreement require us to remain in compliance with financial and other covenants, with which we are currently in compliance. As of March 31, 2012 there were no advances drawn against this credit line.

Operating activities generated cash of \$21.6 million in the three months ended March 31, 2012. Net income for this period was \$7.5 million; we also incurred non-cash depreciation, amortization and stock-based compensation expenses of \$3.7 million, \$0.2 million and \$3.0 million, respectively. Additional sources of cash included (1) a \$9.2 million decline in inventory

Table of Contents

due to reduced wafer purchases and stronger-than-expected sales during the quarter (2) a \$1.5 million decrease in accounts payable primarily due to the timing of invoice payment processing and (3) a \$1.3 million decrease in prepaid expenses resulting primarily from a decrease in prepaid legal fees. These sources of cash were partially offset by a \$7.3 million increase in accounts receivable due to higher shipments in March 2012, compared to December 2011.

Our operating activities generated cash of \$5.7 million in the three months ended March 31, 2011, driven primarily by (1) net income of \$9.9 million, which included the impact of non-cash depreciation, amortization and stock-based compensation expenses totaling \$3.7 million, \$0.2 million and \$2.5 million, respectively, (2) an increase in prepaid expenses and other assets of \$1.4 million, due primarily to the amortization of prepaid legal expenses in the first quarter of 2011. These sources of cash were partially offset by; (1) an increase in accounts receivable of \$7.6 million, related to increased customer shipments in the first quarter of 2011 compared to the fourth quarter of 2010, (2) a decrease in accounts payable of \$2.9 million related to the timing of invoice payment processing, and (3) a decrease in deferred income on sales to distributors of \$1.3 million, due primarily to a decrease in our distributor inventory levels compared to the prior quarter, reducing the related deferred revenue.

Our investing activities in the three months ended March 31, 2012 resulted in a \$19.5 million net use of cash, consisting of: (1) \$7.5 million for purchases of property and equipment, primarily manufacturing equipment to support our growth, and building improvements in connection with our research and development facility in New Jersey; and (2) \$18.0 million for the issuance of a Note receivable from SemiSouth (refer to Note 15, Investment in Third Party, for further details). These uses of cash were partially offset by \$6.1 million of proceeds from maturities of marketable securities. Our investing activities in the three months ended March 31, 2011, resulted in a \$29.9 million use of cash, consisting of: (1) \$10.2 million of net purchases of marketable securities; (2) \$7.2 million for purchases of property and equipment; (3) \$6.9 million paid in relation to the acquisition of Qspeed; and (4) \$5.6 million in connection with our lease line with SemiSouth.

Our financing activities in the three months ended March 31, 2012, resulted in net cash proceeds of \$5.2 million. Financing activities consisted primarily of proceeds of \$6.5 million from the issuance of common stock, including the exercise of employee stock options and the issuance of shares through our employee stock purchase plan, partially offset by \$1.4 million for the payment of dividends to stockholders. In the three months ended March 31, 2011, we received \$6.2 million, net, from financing activities, consisting primarily of \$7.3 million from the issuance of common stock, including the exercise of employee stock options and the issuance of shares through our employee stock purchase plan, partially offset by \$1.4 million for the payment of dividends to stockholders.

On March 30, 2012, we entered into a definitive share purchase agreement, through our subsidiaries, to acquire Concept, a Swiss company, by acquiring all of the outstanding shares of its Swiss parent companies Concept Beteiligungen AG and CT-Concept Holding AG for approximately \$115.8 million, net of assumed cash. We closed the acquisition on May 1, 2012. Pursuant to the purchase agreement, the purchase price is subject to a net asset value adjustment which will be determined after the closing date, and is limited to a maximum of approximately \$7.7 million. The net asset value adjustment will be paid within approximately six months after May 1, 2012.

We paid dividends on a quarterly basis in 2011, which resulted in approximately a \$1.4 million use of cash per quarter. In January 2012, our board of directors continued the dividend payments by declaring four quarterly cash dividends in the amount of \$0.05 per share to be paid to stockholders of record at the end of each quarter in 2012. The first quarterly dividend payment of approximately \$1.4 million was made on March 30, 2012, with subsequent quarterly payments to be approximately the same amount. The declaration of any future cash dividend is at the discretion of the board of directors and will depend on our financial condition, results of operations, capital requirements, business conditions and other factors, as well as a determination that cash dividends are in the best interest of our stockholders.

As of March 31, 2012 we have a contractual obligation related to income tax, which comprises primarily unrecognized tax benefits of approximately \$35.5 million. The tax obligation was classified as long-term income taxes payable and a portion is recorded in deferred tax assets in our condensed consolidated balance sheet. The settlement period for our income tax liabilities cannot be determined; however, they are not expected to be due within the next year.

In the first quarter of 2011, the IRS informed us that it intends to propose material adjustments to our taxable income for fiscal years 2003 through 2006 related to our intercompany research and development cost-sharing arrangement and related issues. In December 2011, we received an addendum to the notice of proposed adjustments from the IRS related to our intercompany research and development cost sharing arrangement. We believe the IRS's position with respect to the proposed

Table of Contents

adjustment is without merit, inconsistent with applicable tax law, and that we have a meritorious defense to our position. Accordingly, we intend to continue to challenge the IRS's position on this matter vigorously. While we believe the IRS's asserted position on this matter is not supported by applicable law, we may be required to make additional payments to the IRS pending resolution of this matter. If this matter is litigated and the IRS is able to successfully sustain its position, our results of operations and financial condition could be materially and adversely affected. Resolution of this matter is not anticipated within the next year (refer to Note 9, Provision for Income Taxes, in our Notes to Condensed Consolidated Financial Statements).

In March 2012, we loaned \$18.0 million to SemiSouth, and in exchange we were issued a promissory note. We intend to hold the note to maturity which occurs in March 2014. In connection with the note issuance we amended our 2010 agreement with SemiSouth to include a cap on the purchase price of \$80.0 million under the Call and Put Option ("Purchase Option"). We estimated the value of the Purchase Option to be approximately \$6.2 million using Level 2 inputs, refer to Note 4, Fair Value Measurements, in our Notes to Condensed Consolidated Financial Statements for valuation details. We accounted for the \$18.0 million promissory note in Other Assets in our condensed consolidated balance sheet, net of the \$6.2 million interest discount related to the Purchase Option. The interest discount will be amortized to interest income over the life of the promissory note. The amortization of the interest discount and the stated interest rate on the promissory note reflects the approximate fair value of the effective interest rate. There were no other material changes, other than stated in the liquidity section above, outside of the ordinary course of business in our contractual commitments reported in our Annual Report on Form 10-K for the year ended December 31, 2011.

Our existing cash, cash equivalents and investment balances may change during the year due to changes in our planned cash outlays, including changes in incremental costs such as direct and integration costs related to our acquisitions. Our intent is to permanently reinvest our earnings from foreign operations. Current plans do not anticipate that we will need funds generated from foreign operations to fund our domestic operations since the majority of our cash and investments are held in the U.S. In the event funds from foreign operations are needed to fund operations in the United States and if U.S. tax has not already been previously provided, we would be required to accrue and pay additional U.S. taxes in connection with the repatriation of any funds.

If our operating results deteriorate during the remainder of 2012, either as a result of a decrease in customer demand, or severe pricing pressures from our customers or our competitors, or for other reasons, our ability to generate positive cash flow from operations may be jeopardized. In that case, we may be forced to use our cash, cash equivalents and short-term investments, use our credit agreement or seek additional financing from third parties to fund our operations. We believe that cash generated from operations, together with existing sources of liquidity, will satisfy our projected working capital and other cash requirements for at least the next 12 months.

Recent Accounting Pronouncements

On January 1, 2012, we adopted the following accounting pronouncements:

In May 2011, the Financial Accounting Standards Board (FASB) issued amendments to the FASB Accounting Standard Codification (ASC) relating to fair value measurements, Accounting Standards Update (ASU) 2011-04, Fair Value Measurement, ASC Topic 820. The amendments clarify the application of existing fair value measurement requirements and results in common measurement and disclosure requirements in U.S. GAAP and International Financial Reporting Standards (IFRS). We adopted these amendments in the first quarter of 2012, and determined that the adoption did not have a material impact on our condensed consolidated financial statements.

In June 2011, the FASB issued ASU No. 2011-05, Comprehensive Income (ASC Topic 220). This amendment gives an entity two options to present the total of comprehensive income, the components of net income, and the

components of other comprehensive income. An entity can elect to present comprehensive income in either (1) a single continuous statement of comprehensive income, or (2) in two separate but consecutive statements. In both choices, an entity is required to present each component of net income along with total net income, each component of other comprehensive income along with a total for other comprehensive income, and a total amount for comprehensive income. We adopted this amendment in the first quarter of 2012, and will disclose other comprehensive income in a separate but consecutive statement following our condensed consolidated statements of income.

In September 2011, the FASB issued ASU No. 2011-08, Testing Goodwill for Impairment, (ASC Topic 350). Under

Table of Contents

the amendments in this ASU, an entity has the option to first assess qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If, after assessing the totality of events or circumstances, an entity determines it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, then performing the two-step impairment test is unnecessary. However, if an entity concludes otherwise, then it is required to perform the first step of the two-step impairment test by calculating the fair value of the reporting unit and comparing the fair value with the carrying amount of the reporting unit. If the carrying amount of a reporting unit exceeds its fair value, then the entity is required to perform the second step of the goodwill impairment test to measure the amount of the impairment loss, if any. Under the amendments in this ASU, an entity also has the option to bypass the qualitative assessment for any reporting unit in any period and proceed directly to performing the first step of the two-step goodwill impairment test. An entity may resume performing the qualitative assessment in any subsequent period.

Table of Contents

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

There has not been a material change in our exposure to interest rate and foreign currency risks from that described in our 2011 Annual Report on Form 10-K.

Interest Rate Risk. Our exposure to market risk for changes in interest rates relates primarily to our investment portfolio and the fixed rate note receivable from SemiSouth. We consider cash invested in highly liquid financial instruments with a remaining maturity of three months or less at the date of purchase to be cash equivalents. Investments in highly liquid financial instruments with maturities greater than three months are classified as short-term investments. In the first quarter of 2012, we changed our investment policy to allow the sale of long-term and short-term investments prior to their stated maturity date. We generally hold securities until maturity; however, they may now be sold under certain circumstances, including, but not limited to, when necessary for the funding of acquisitions and other strategic investments. As a result of this change in policy we classify our investment portfolio as available-for-sale as opposed to held-to-maturity. We do not use derivative financial instruments in our investment portfolio to manage our interest rate risk, foreign currency risk, or for any other purpose. We invest in high-credit quality issuers and, by policy, limit the amount of credit exposure to any one issuer. As stated in our policy, we seek to ensure the safety and preservation of our invested principal funds by limiting default risk, market risk and reinvestment risk. We mitigate default risk by investing in safe and high-credit quality securities and by constantly positioning our portfolio to respond appropriately to a significant reduction in a credit rating of any investment issuer, guarantor or depository. The portfolio includes only marketable securities with active secondary or resale markets to facilitate portfolio liquidity. At March 31, 2012, and December 31, 2011, we held primarily cash equivalents and short-term and long-term investments with fixed interest rates.

Foreign Currency Exchange Risk. As of March 31, 2012, our primary transactional currency was in U.S. dollars, however we have sales offices in various foreign countries in which our expenses are denominated in the local currency, primary Asia and Western Europe. As of March 31, 2012 we did not employ a foreign currency hedge program utilizing foreign currency forward exchange contracts.

Two of our major suppliers, Seiko Epson Corporation, or Epson, and ROHM Lapis Semiconductor Co., Ltd., or Lapis, have wafer supply agreements based in U.S. dollars; however, our agreements with Epson and Lapis also allow for mutual sharing of the impact of the exchange rate fluctuation between Japanese yen and the U.S. dollar. Each year, our management and these suppliers review and negotiate pricing; the negotiated pricing is denominated in U.S. dollars but is subject to contractual exchange rate provisions. The fluctuation in the exchange rate is shared equally between Power Integrations and each of these suppliers.

Nevertheless, as a result of our above-mentioned supplier agreements, our gross margin is influenced by fluctuations in the exchange rate between the U.S. dollar and the Japanese yen. All else being equal, a 10% change in the value of the U.S. dollar compared to the Japanese yen would result in a corresponding change in our gross margin of approximately 1 percentage point; this sensitivity may increase or decrease depending on the percentage of our wafer supply that we purchase from some of our Japanese suppliers and could subject our gross profit and operating results to the potential for material fluctuations.

At March 31, 2012, and December 31, 2011, we did not have material cash or investments denominated in foreign currencies, and therefore had no material foreign currency exchange risk related to our cash and investments.

ITEM 4. CONTROLS AND PROCEDURES

Limitation on Effectiveness of Controls

Any control system, no matter how well designed and operated, can provide only reasonable assurance as to the tested objectives. The design of any control system is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote. The inherent limitations in any control system include the realities that judgments related to decision-making can be faulty, and that reduced effectiveness in controls can occur because of simple errors or mistakes. Due to the inherent limitations in a cost-effective control system, misstatements due to error may occur and may not be detected.

Evaluation of Disclosure Controls and Procedures

Management is required to evaluate our disclosure controls and procedures, as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934 (the “Exchange Act”). Disclosure controls and procedures are controls and other procedures designed to provide reasonable assurance that information required to be disclosed in our reports filed under the Exchange Act,

Table of Contents

such as this Quarterly Report on Form 10-Q, is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms. Disclosure controls and procedures include controls and procedures designed to provide reasonable assurance that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer as appropriate to allow timely decisions regarding required disclosure. Based on our management's evaluation (with the participation of our principal executive officer and principal financial officer), our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) were effective as of the end of the period covered by this report.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting during the quarter ended March 31, 2012, which materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

Information with respect to this item may be found in Note 12, Legal Proceedings and Contingencies, in our Notes to Condensed Consolidated Financial Statements included earlier in this Quarterly Report on Form 10-Q, which information is incorporated herein by reference.

ITEM 1A. RISK FACTORS

In addition to the other information in this report, the following factors should be considered carefully in evaluating our business before purchasing shares of our stock. The risks facing our business have not changed substantively from those discussed in our Annual Report on Form 10-K for the year ended December 31, 2011, except for those risk factors below designated by an asterisk (*).

Our quarterly operating results are volatile and difficult to predict. If we fail to meet the expectations of public market analysts or investors, the market price of our common stock may decrease significantly. Our net revenues and operating results have varied significantly in the past, are difficult to forecast, are subject to numerous factors both within and outside of our control, and may fluctuate significantly in the future. As a result, our quarterly operating results could fall below the expectations of public market analysts or investors. If that occurs, the price of our stock may decline.

Some of the factors that could affect our operating results include the following:

• competitive pressures on selling prices;

• the demand for our products declining in the major end markets we serve, which may occur due to competitive factors, supply-chain fluctuations or changes in macroeconomic conditions;

• the inability to adequately protect or enforce our intellectual property rights;

• expenses we are required to incur (or choose to incur) in connection with our intellectual property litigations;

• an audit by the Internal Revenue Service, which is asserting that we owe additional taxes relating to a number of tax related positions;

• reliance on international sales activities for a substantial portion of our net revenues;

• risks associated with acquisitions and strategic investments;

our ability to successfully integrate, or realize the expected benefits from, our acquisitions;

fluctuations in exchange rates, particularly the exchange rate between the U.S. dollar and the Japanese yen;

the volume and timing of delivery of orders placed by us with our wafer foundries and assembly subcontractors, and

43

Table of Contents

their ability to procure materials;

• earthquakes, terrorists acts or other disasters;

• continued impact of recently enacted changes in securities laws and regulations, including potential risks resulting from our evaluation of internal controls under the Sarbanes-Oxley Act of 2002;

• the lengthy timing of our sales cycle;

• undetected defects and failures in meeting the exact specifications required by our products;

• our ability to develop and bring to market new products and technologies on a timely basis;

• the ability of our products to penetrate additional markets;

• the volume and timing of orders received from customers;

• our ability to attract and retain qualified personnel;

• changes in environmental laws and regulations, including with respect to energy consumption and climate change; and

• interruptions in our information technology systems.

Intense competition in the high-voltage power supply industry may lead to a decrease in our average selling price and reduced sales volume of our products. The high-voltage power supply industry is intensely competitive and characterized by significant price sensitivity. Our products face competition from alternative technologies, such as linear transformers, discrete switcher power supplies, and other integrated and hybrid solutions. If the price of competing solutions decreases significantly, the cost effectiveness of our products will be adversely affected. If power requirements for applications in which our products are currently utilized go outside the cost-effective range of our products, some of these alternative technologies can be used more cost effectively. In addition, as our patents expire, our competitors could legally begin using the technology covered by the expired patents in their products, potentially increasing the performance of their products and/or decreasing the cost of their products, which may enable our competitors to compete more effectively. Our current patents may or may not inhibit our competitors from getting any benefit from an expired patent. Our U.S. patents have expiration dates ranging from 2012 to 2029. We cannot assure that our products will continue to compete favorably or that we will be successful in the face of increasing competition from new products and enhancements introduced by existing competitors or new companies entering this market. We believe our failure to compete successfully in the high-voltage power supply business, including our ability to introduce new products with higher average selling prices, would materially harm our operating results.

If demand for our products declines in our major end markets, our net revenues will decrease. A limited number of applications of our products, such as cellphone chargers, standby power supplies for PCs, and power supplies for home appliances make up a significant percentage of our net revenues. We expect that a significant level of our net revenues and operating results will continue to be dependent upon these applications in the near term. The demand for these products has been highly cyclical and has been impacted by economic downturns in the past. Any economic slowdown in the end markets that we serve could cause a slowdown in demand for our ICs. When our customers are not successful in maintaining high levels of demand for their products, their demand for our ICs decreases, which adversely affects our operating results. Any significant downturn in demand in these markets would cause our net revenues to decline and could cause the price of our stock to fall.

If we are unable to adequately protect or enforce our intellectual property rights, we could lose market share, incur costly litigation expenses, suffer incremental price erosion or lose valuable assets, any of which could harm our operations and negatively impact our profitability. Our success depends upon our ability to continue our technological innovation and protect our intellectual property, including patents, trade secrets, copyrights and know-how. We are currently engaged in litigation to enforce our intellectual property rights, and associated expenses have been, and are expected to remain, material and have adversely affected our operating results. We cannot assure that the steps we have taken to protect our intellectual property will be adequate to prevent misappropriation, or that others will not develop competitive technologies or products. From time to time, we have received, and we may receive in the future, communications alleging possible infringement of patents or other intellectual property rights of others. Costly litigation may be necessary to enforce our intellectual property rights or to defend us against claimed infringement. The failure to obtain necessary licenses and other rights, and/or litigation arising out of infringement claims could cause us to lose market share and harm our business.

Table of Contents

As our patents expire, we will lose intellectual property protection previously afforded by those patents. Additionally, the laws of some foreign countries in which our technology is or may in the future be licensed may not protect our intellectual property rights to the same extent as the laws of the United States, thus limiting the protections applicable to our technology.

If we do not prevail in our litigation, we will have expended significant financial resources, potentially without any benefit, and may also suffer the loss of rights to use some technologies. We are currently involved in a number of patent litigation matters and the outcome of the litigation is uncertain. See Note 10, Legal Proceedings and Contingencies, in our Notes to Consolidated Financial Statements. For example, in one of our patent suits the infringing company has been found to infringe four of our patents. Despite the favorable court finding, the infringing party filed an appeal to the damages awarded. In another matter, we are being sued for patent infringement in China, where the outcome of litigation can be more uncertain than in the United States. Should we ultimately be determined to be infringing on another party's patents, or if an injunction is issued against us while litigation is pending on those claims, such result could have an adverse impact on our ability to sell products found to be infringing, either directly or indirectly. In the event of an adverse outcome, we may be required to pay substantial damages, stop our manufacture, use, sale, or importation of infringing products, or obtain licenses to the intellectual property we are found to have infringed. We have also incurred, and expect to continue to incur, significant legal costs in conducting these lawsuits, including the appeal of the case we won, and our involvement in this litigation and any future intellectual property litigation could adversely affect sales and divert the efforts and attention of our technical and management personnel, whether or not such litigation is resolved in our favor. Thus, even if we are successful in these lawsuits, the benefits of this success may fail to outweigh the significant legal costs we will have incurred.

*We are being audited by the Internal Revenue Service which is asserting that we owe additional taxes relating to a number of tax related positions, and if we are not successful in defending our positions we may be obligated to pay additional taxes, as well as penalties and interest, and may also have a higher effective income tax rate in the future. Our operations are subject to income and transaction taxes in the United States and in multiple foreign jurisdictions and to review or audit by the IRS and state, local and foreign tax authorities. In the quarter ended March 31, 2011, we received Notices of Proposed Adjustments from the IRS showing proposed material changes to our taxable income for fiscal years 2003 through 2006, primarily related to our intercompany research and development cost-sharing arrangement. In December 2011, we received an addendum to the notice of proposed adjustments from the IRS related to our intercompany research and development cost sharing arrangement. The fiscal years 2007 through 2009 are also under audit by the IRS. While the IRS has not completed its audit for these years, we anticipate that it will again propose an adjustment related to our intercompany research and development cost-sharing arrangement. We believe the IRS's position with respect to the proposed adjustment related to our research and development cost-sharing arrangement is inconsistent with applicable tax law, and that we have a meritorious defense to our position. Accordingly, we intend to continue to challenge the IRS's position on this matter vigorously. While we believe the IRS's asserted position on this matter is not supported by applicable law, we may be required to make additional payments in order to resolve this matter. If this matter is litigated and the IRS is able to successfully sustain its position, our results of operations and financial condition could be materially and adversely affected. Resolution of this matter could take considerable time, possibly years.

Our international sales activities account for a substantial portion of our net revenues, which subjects us to substantial risks. Sales to customers outside of the Americas account for, and have accounted for a large portion of our net revenues, including approximately 96% of our net revenues for three months ended March 31, 2012 and for the year ended December 31, 2011. If our international sales declined and we were unable to increase domestic sales, our revenues would decline and our operating results would be harmed. International sales involve a number of risks to us, including:

• potential insolvency of international distributors and representatives;

• reduced protection for intellectual property rights in some countries;

• the impact of recessionary environments in economies outside the United States;

• tariffs and other trade barriers and restrictions;

• the burdens of complying with a variety of foreign and applicable U.S. Federal and state laws; and

• foreign-currency exchange risk.

Our failure to adequately address these risks could reduce our international sales and materially and adversely affect

45

Table of Contents

our operating results. Furthermore, because substantially all of our foreign sales are denominated in U.S. dollars, increases in the value of the dollar cause the price of our products in foreign markets to rise, making our products more expensive relative to competing products priced in local currencies.

We are exposed to risks associated with acquisitions and strategic investments. We have made, and in the future intend to make, acquisitions of, and investments in, companies, technologies or products in existing, related or new markets. Acquisitions involve numerous risks, including but not limited to:

- inability to realize anticipated benefits, which may occur due to any of the reasons described below, or for other unanticipated reasons;

- the risk of litigation or disputes with customers, suppliers, partners or stockholders of an acquisition target arising from a proposed or completed transaction;

- impairment of acquired intangible assets and goodwill as a result of changing business conditions, technological advancements or worse-than-expected performance, which would adversely affect our financial results; and

- unknown, underestimated and/or undisclosed commitments, liabilities or issues not discovered in our due diligence of such transactions.

We also make strategic investments in other companies, which may decline in value and/or not meet desired objectives. The success of these strategic investments depends on various factors over which we may have limited or no control and requires ongoing and effective cooperation with strategic partners. Moreover, these investments are often illiquid, such that it may be difficult or impossible for us to monetize such investments.

Our inability to successfully integrate, or realize the expected benefits from, our acquisitions could adversely affect our results. We have made, and in the future intend to make, acquisitions of other businesses, and with these acquisitions there is a risk that integration difficulties may cause us not to realize expected benefits. The success of the acquisitions could depend, in part, on our ability to realize the anticipated benefits and cost savings (if any) from combining the businesses of the acquired companies and our business, which may take longer to realize than expected.

Fluctuations in exchange rates, particularly the exchange rate between the U.S. dollar and the Japanese yen, may impact our gross margin. Two of our major suppliers, Epson and Lapis, have wafer supply agreements based in U.S. dollars; however, our agreements with Epson and Lapis also allow for mutual sharing of the impact of the exchange rate fluctuation between Japanese yen and the U.S. dollar. Each year, our management and these suppliers review and negotiate pricing; the negotiated pricing is denominated in U.S. dollars but is subject to contractual exchange rate provisions. The fluctuation in the exchange rate is shared equally between Power Integrations and each of these suppliers.

We depend on third-party suppliers to provide us with wafers for our products and if they fail to provide us sufficient quantities of wafers, our business may suffer. We have supply arrangements for the production of wafers with Lapis, Renesas, X-FAB and Epson. Our contracts with these suppliers expire in April 2018, August 2014, December 2012 and December 2020, respectively. Although some aspects of our relationships with Lapis, Renesas, X-FAB and Epson are contractual, many important aspects of these relationships depend on their continued cooperation. We cannot assure that we will continue to work successfully with Lapis, Renesas, X-FAB and Epson in the future, and that the wafer foundries' capacity will meet our needs. Additionally, one or more of these wafer foundries could seek an early termination of our wafer supply agreements. Any serious disruption in the supply of wafers from Lapis, Renesas, X-FAB or Epson could harm our business. We estimate that it would take 12 to 24 months from the time we identified an alternate manufacturing source to produce wafers with acceptable manufacturing yields in sufficient quantities to

meet our needs.

Although we provide our foundries with rolling forecasts of our production requirements, their ability to provide wafers to us is ultimately limited by the available capacity of the wafer foundry. Any reduction in wafer foundry capacity available to us could require us to pay amounts in excess of contracted or anticipated amounts for wafer deliveries or require us to make other concessions to meet our customers' requirements, or may limit our ability to meet demand for our products. Further, to the extent demand for our products exceeds wafer foundry capacity, this could inhibit us from expanding our business and harm relationships with our customers. Any of these concessions or limitations could harm our business.

46

Table of Contents

If our third-party suppliers and independent subcontractors do not produce our wafers and assemble our finished products at acceptable yields, our net revenues may decline. We depend on independent foundries to produce wafers, and independent subcontractors to assemble and test finished products, at acceptable yields and to deliver them to us in a timely manner. The failure of the foundries to supply us wafers at acceptable yields could prevent us from selling our products to our customers and would likely cause a decline in our net revenues and gross margin. In addition, our IC assembly process requires our manufacturers to use a high-voltage molding compound that has been available from only a few suppliers. These compounds and their specified processing conditions require a more exacting level of process control than normally required for standard IC packages. Unavailability of assembly materials or problems with the assembly process can materially and adversely affect yields, timely delivery and cost to manufacture. We may not be able to maintain acceptable yields in the future.

In addition, if prices for commodities used in our products increase significantly, raw material costs would increase for our suppliers which could result in an increase in the prices our suppliers charge us. (Recent increases in the price of gold and copper, which are used in our IC packages and lead frames, respectively, have in fact increased our product costs to some degree.) To the extent we are not able to pass these costs on to our customers; this would have an adverse effect on our gross margins.

In the event of an earthquake, terrorist act or other disaster, our operations may be interrupted and our business would be harmed. Our principal executive offices and operating facilities are situated near San Francisco, California, and most of our major suppliers, which are wafer foundries and assembly houses, are located in areas that have been subject to severe earthquakes, such as Japan. Many of our suppliers are also susceptible to other disasters such as tropical storms, typhoons or tsunamis. In the event of a disaster, such as the recent earthquake and tsunami in Japan, we or one or more of our major suppliers may be temporarily unable to continue operations and may suffer significant property damage. Any interruption in our ability or that of our major suppliers to continue operations could delay the development and shipment of our products and have a substantial negative impact on our financial results.

Securities laws and regulations, including potential risk resulting from our evaluation of internal controls under the Sarbanes-Oxley Act of 2002, will continue to impact our results. Complying with the requirements of the Sarbanes-Oxley Act of 2002 and NASDAQ's conditions for continued listing have imposed significant legal and financial compliance costs, and are expected to continue to impose significant costs and management burden on us. These rules and regulations also may make it more expensive for us to obtain director and officer liability insurance, and we may be required to accept reduced coverage or incur substantially higher costs to obtain coverage. These rules and regulations could also make it more difficult for us to attract and retain qualified executive officers and members of our board of directors, particularly qualified members to serve on our audit committee. Further, the rules and regulations under the Dodd-Frank Wall Street Reform and Consumer Protection Act, which became effective in 2011, may impose significant costs and management burden on us.

Additionally, because these laws, regulations and standards promulgated by the Sarbanes-Oxley Act and the Dodd-Frank Act are expected to be subject to varying interpretations, their application in practice may evolve over time as new guidance becomes available. This evolution may result in continuing uncertainty regarding compliance matters and additional costs necessitated by ongoing revisions to our disclosure and governance practices.

Because the sales cycle for our products can be lengthy, we may incur substantial expenses before we generate significant revenues, if any. Our products are generally incorporated into a customer's products at the design stage. However, customer decisions to use our products, commonly referred to as design wins, can often require us to expend significant research and development and sales and marketing resources without any assurance of success. These significant research and development and sales and marketing resources often precede volume sales, if any, by a year or more. The value of any design win will largely depend upon the commercial success of the customer's product. We cannot assure that we will continue to achieve design wins or that any design win will result in future revenues. If a customer decides at the design stage not to incorporate our products into its product, we may not have another opportunity for a design win with respect to that product for many months or years.

Our products must meet exacting specifications, and undetected defects and failures may occur which may cause customers to return or stop buying our products. Our customers generally establish demanding specifications for quality, performance and reliability, and our products must meet these specifications. ICs as complex as those we sell often encounter development delays and may contain undetected defects or failures when first introduced or after commencement of commercial shipments. We have from time to time in the past experienced product quality, performance or reliability problems. If defects and failures occur in our products, we could experience lost revenue, increased costs, including warranty expense and costs associated with customer support and customer expenses, delays in or cancellations or rescheduling of orders or shipments and product returns or discounts, any of which would harm our operating results.

Table of Contents

If our efforts to enhance existing products and introduce new products are not successful, we may not be able to generate demand for our products. Our success depends in significant part upon our ability to develop new ICs for high-voltage power conversion for existing and new markets, to introduce these products in a timely manner and to have these products selected for design into products of leading manufacturers. New product introduction schedules are subject to the risks and uncertainties that typically accompany development and delivery of complex technologies to the market place, including product development delays and defects. If we fail to develop and sell new products in a timely manner then our net revenues could decline.

In addition, we cannot be sure that we will be able to adjust to changing market demands as quickly and cost-effectively as necessary to compete successfully. Furthermore, we cannot assure that we will be able to introduce new products in a timely and cost-effective manner or in sufficient quantities to meet customer demand or that these products will achieve market acceptance. Our failure, or our customers' failure, to develop and introduce new products successfully and in a timely manner would harm our business. In addition, customers may defer or return orders for existing products in response to the introduction of new products. When a potential liability exists we will maintain reserves for customer returns, however we cannot assure that these reserves will be adequate.

If our products do not penetrate additional markets, our business will not grow as we expect. We believe that our future success depends in part upon our ability to penetrate additional markets for our products. We cannot assure that we will be able to overcome the marketing or technological challenges necessary to penetrate additional markets. To the extent that a competitor penetrates additional markets before we do, or takes market share from us in our existing markets, our net revenues and financial condition could be materially adversely affected.

We do not have long-term contracts with any of our customers and if they fail to place, or if they cancel or reschedule orders for our products, our operating results and our business may suffer. Our business is characterized by short-term customer orders and shipment schedules, and the ordering patterns of some of our large customers have been unpredictable in the past and will likely remain unpredictable in the future. Not only does the volume of units ordered by particular customers vary substantially from period to period, but also purchase orders received from particular customers often vary substantially from early oral estimates provided by those customers for planning purposes. In addition, customer orders can be canceled or rescheduled without significant penalty to the customer. In the past, we have experienced customer cancellations of substantial orders for reasons beyond our control, and significant cancellations could occur again at any time. Also, a relatively small number of distributors, OEMs and merchant power supply manufacturers account for a significant portion of our revenues. Specifically, our top ten customers, including distributors, accounted for 66% of our net revenues in the three months ended March 31, 2012, and 62% of our net revenues for the year ended December 31, 2011. However, a significant portion of these revenues are attributable to sales of our products through distributors of electronic components. These distributors sell our products to a broad, diverse range of end users, including OEMs and merchant power supply manufacturers, which mitigates the risk of customer concentration to a large degree.

We must attract and retain qualified personnel to be successful and competition for qualified personnel is intense in our market. Our success depends to a significant extent upon the continued service of our executive officers and other key management and technical personnel, and on our ability to continue to attract, retain and motivate qualified personnel, such as experienced analog design engineers and systems applications engineers. The competition for these employees is intense, particularly in Silicon Valley. The loss of the services of one or more of our engineers, executive officers or other key personnel could harm our business. In addition, if one or more of these individuals leaves our employ, and we are unable to quickly and efficiently replace those individuals with qualified personnel who can smoothly transition into their new roles, our business may suffer. We do not have long-term employment contracts with, and we do not have in place key person life insurance policies on, any of our employees.

Changes in environmental laws and regulations may increase our costs related to obsolete products in our existing inventory. Changing environmental regulations and the timetable to implement them continue to impact our customers' demand for our products. As a result there could be an increase in our inventory obsolescence costs for products manufactured prior to our customers' adoption of new regulations. Currently we have limited visibility into our customers' strategies to implement these changing environmental regulations into their business. The inability to accurately determine our customers' strategies could increase our inventory costs related to obsolescence.

Interruptions in our information technology systems could adversely affect our business. We rely on the efficient and uninterrupted operation of complex information technology systems and networks to operate our business. Any significant system or network disruption, including but not limited to new system implementations, computer viruses, security breaches, or energy blackouts could have a material adverse impact on our operations, sales and operating results. We have implemented

Table of Contents

measures to manage our risks related to such disruptions, but such disruptions could still occur and negatively impact our operations and financial results. In addition, we may incur additional costs to remedy any damages caused by these disruptions or security breaches.

Like other U.S. companies, our business and operating results are subject to uncertainties arising out of economic consequences of current and potential military actions or terrorist activities and associated political instability, and the impact of heightened security concerns on domestic and international travel and commerce. These uncertainties could also lead to delays or cancellations of customer orders, a general decrease in corporate spending or our inability to effectively market and sell our products. Any of these results could substantially harm our business and results of operations, causing a decrease in our revenues.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

In November 2011, our board of directors authorized the use of \$30.0 million for the repurchase of our common stock. In the first quarter of 2012, in connection with the execution of our acquisition of Concept, our board of directors canceled this stock repurchase program. Authorization of future stock repurchase programs are at the discretion of the board of directors and will depend on our financial condition, results of operations, capital requirements, business conditions as well as other factors.

ITEM 4. MINE SAFETY DISCLOSURES

None

ITEM 6. EXHIBITS

See the Exhibit Index immediately following the signature page to this Quarterly Report on Form 10-Q, which is incorporated by reference here.

INDEX TO EXHIBITS

EXHIBIT NUMBER	DESCRIPTION
2.1	Share Purchase Agreement, dated March 30, 2012, by and between Heinz Rüedi, Power Integrations Netherlands B.V. and Power Integrations Limited regarding shares of Concept Beteiligungen AG and CT-Concept Holding AG. (As filed with the SEC as Exhibit 2.01 to our Current Report on Form 8-K on May 7, 2012, SEC File No. 000-23441.)*
3.1	Restated Certificate of Incorporation. (As filed with the SEC as Exhibit 3.1 to our Annual Report on Form 10-K on February 29, 2012, SEC File No. 000-23441.)
3.2	Amended and Restated Bylaws. (As filed with the SEC as Exhibit 3.1 to our Current Report on Form 8-K on January 30, 2012, SEC File No. 000-23441.)
4.1	Reference is made to Exhibits 3.1 and 3.2.
10.1	Amendment Number Three to Wafer Supply Agreement, effective as of February 1, 2012, by Power Integrations International Ltd. and Seiko Epson Corporation.*
10.2	Wafer Supply Agreement, made and entered into as of this 1st day of October, 2010, by and between Power Integrations International, Ltd., and X-FAB Semiconductor Foundries AG.*
10.3	Credit Agreement, dated February 22, 2011, by and between Power Integrations, Inc. and Wells Fargo Bank, National Association.
10.4	Amendment to Credit Agreement, dated August 2, 2011, by and between Power Integrations, Inc. and Wells Fargo Bank, National Association.
10.5	Second Amendment to Credit Agreement, dated April 2, 2012, by and between Power Integrations, Inc. and Wells Fargo Bank, National Association.
10.6	2012 Executive Officer Cash Compensation Arrangements and 2012 Bonus Plan (As described in Item 5.02 of our Current Report on Form 8-K filed with the SEC on January 30, 2012, SEC File No. 000-23441.)
31.1	Certification of Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
31.2	Certification of Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
32.1	Certification of Chief Executive Officer pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.**
32.2	Certification of Chief Financial Officer pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.**
101.INS	XBRL Instance Document

Edgar Filing: POWER INTEGRATIONS INC - Form 10-Q

101.SCH	XBRL Taxonomy Extension Schema Document
101.CAL	XBRL Taxonomy Extension Calculation Linkbase Document
101.DEF	XBRL Taxonomy Extension Definition Linkbase Document
