SR Telecom s angel Selected for Broadband Network in the Philippines New airstar orders also received from Indonesia

MONTREAL, January 30, 2004 -SR Telecom™ Inc. (TSX: SRX; Nasdaq: SRXA) today announced that Bell Telecommunication Philippines Inc. (Belltel), a full-service telecommunications provider in the Philippines, has selected the **angel**™ fixed wireless access system for a voice and broadband Internet project in Manila. This is the first commercial deployment of the **angel** platform in the Philippines.

Deployed as an integral part of Belltel s iDirect service, the **angel** product will provide bundled data services, high-speed Internet access and carrier-class voice services to Belltel s large customer base in the business and high-end residential sectors in Manila.

While we have been very active in the Philippines for many years, this project represents a contract win with a new customer, Belltel, and a first for **angel** in the Philippines. We are pleased with the confidence Belltel has placed in SR Telecom and look forward to advancing what we expect will be a very extensive infrastructure project, said Claude Giguere, SR Telecom s Senior Vice-President, Sales.

We are also particularly encouraged by the renewed vigor in our sector of the telecommunications industry. In the last few months we have seen a marked increase in bidding activity for fixed wireless access projects, particularly in the broadband segment, concluded Mr. Giguere.

Edgar Filing: SR TELECOM INC - Form 6-K

SR Telecom also announced that it has received additional **airstar** orders from PT Aplikanusa Lintasarta, the largest data and corporate network communications provider in Indonesia. Lintasarta selected the **airstar** system in September 2003 to provide ATM, frame relay and clear channel services to its customers in the Java, Kalimantan and Sulawesi regions of Indonesia. This is the third add-on order for the project.

About angel

angel's non-line-of-sight (NLOS) technology makes many of the benefits of next-generation broadband wireless available today - enabling large-scale deployments with significantly less spectrum than most other technologies. Developed in close collaboration with a large service provider, **angel** delivers DSL-like data rates, large cell sizes, carrier-class voice with efficient handling of V.90 modems and field-proven performance. Additionally, **angel**'s extensive network management capabilities have been carefully designed to optimize deployability and operability. Using Orthogonal Frequency Division Multiplexing (OFDM), **angel** is one of the most robust and versatile NLOS solutions available today. **angel** boosts subscriber coverage to levels that can exceed 95% and is cost effective in both large and small applications.

About airstar

With product availability at 3.5, 10.5, 26 and 28 GHz, **airstar** addresses the needs of operators and carriers who offer metropolitan broadband connectivity services. **airstar**'s intelligent ATM-based technology optimizes spectrum use through packet-based dynamic bandwidth allocation, enabling it to handle a wide variety of services and provide on-demand bandwidth quickly, reliably and economically. **airstar** is also used for cellular transmission infrastructure applications, and is deployed in Europe, Asia, Latin America, the Middle East and North America.

About SR Telecom

SR TELECOM (TSX: SRX, Nasdaq: SRXA) is a world leader and innovator in Fixed Wireless Access technology, which links end-users to networks using wireless transmissions. SR Telecom's solutions include equipment, network planning, project management, installation and maintenance services. The Company offers one of the industry's broadest portfolios of fixed wireless products, designed to enable carriers and service providers to rapidly deploy high-quality voice, high-speed data and broadband applications. These products, which are used in over 120 countries, are among the most advanced and reliable available today.
