RANDGOLD RESOURCES LIMITED

(Exact name of Registrant as specified in its charter)

Not Applicable

(Translation of Registrant's name into English)

JERSEY, CHANNEL ISLANDS

(Jurisdiction of incorporation or organization)

La Motte Chambers, La Motte Street, St. Helier, Jersey JE1 1BJ, Channel Islands

(Address of principal executive offices)

Securities registered or to be registered pursuant to Section 12(b) of the Act.

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Title of each class
Ordinary Shares, US Dollar five cent par value
per Share*
Name of each exchange on which registered
Nasdaq Global Select Market

American Depositary Shares each represented
by one Ordinary Share

* Not for trading, but only in connection with the listing of American Depositary Shares on the Nasdaq Global Select Market pursuant to the requirements of the Securities and Exchange Commission.
Securities registered or to be registered pursuant to Section 12(g) of the Act.

None
(Title of Class)

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

None
(Title of Class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the Annual Report.

As of December 31, 2006, the Registrant had outstanding 68,763,561 ordinary shares, par value \$0.05 per share.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If the report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which financial statement item the registrant has elected to follow. Item
17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Table of Contents

GLOSSARY OF MINING TECHNICAL TERMS

The following explanations are not intended as technical definitions, but rather are intended to assist the reader in understanding some of the terms as used in this Annual Report.

Aureole: A zone of altered country rock around an igneous intrusion.

bcm:

	Bank cubic meter, a volumetric mining measure, equivalent to a cubic meter.
Birimian:	Geological time era, about 2.1 billion years ago.
Carbonate:	A mineral salt typically found in quartz veins and as a product of hydrothermal alteration of sedimentary rock.
Clastic:	Rocks built up of fragments of pre-existing rocks which have been produced by the processes of weathering and erosion.
Cut-off grade:	The lowest grade of material that can be mined and processed considering all applicable costs, without incurring a loss or gaining a profit.
Development:	Activities required to prepare for mining activities and maintain a planned production level.
Dilution:	Mixing of ore grade material with non-ore grade/waste material in the mining process.
Discordant:	Structurally unconformable.
Disseminated:	A term used to describe fine particles of ore or other minerals dispersed through the enclosing rock.
Dyke:	A sheet-like body of igneous rock which is discordant to bedding or foliation.
EEP:	Exclusive exploration permit.
EP:	Exploration permit.
Exploration:	Activities associated with ascertaining the existence, location, extent or quality of mineralized material, including economic and technical evaluations of mineralized material.
Fault:	A fracture or a zone of fractures within a body of rock.
Feldspar:	An alumino-silicate mineral.
Fold:	A flexure of planar structures within the rocks.
Foliation:	A term used to describe planar arrangements of minerals or mineral bands within rocks.

ii

Table of Contents

Footwall:	The underlying side of a fault, orebody or stope.
Fragmentation:	The breakage of rock during blasting in which explosive energy fractures the solid mass into pieces; the distribution of rock particle sizes after blasting.
g/t:	Gram of gold per metric tonne.
Gabbro:	A dark granular igneous rock composed essentially of labradorite and augite.
Gold reserves:	The gold contained within proven and probable reserves on the basis of recoverable material (reported as mill delivered tonnes and head grade).
Gold sales:	

	Represents the sales of gold at spot and the gains/losses on hedge contracts which have been delivered into at the designated maturity date. It excludes gains/losses which have been rolled forward to match future sales. This adjustment is considered appropriate because no cash is received/paid in respect of such contracts.
Grade:	The quantity of metal per unit mass of ore expressed as a percentage or, for gold, as grams of gold per tonne of ore.
Greenstone:	A field term used to describe any weakly metamorphosed rock.
Greywacke:	A dark gray, coarse grained, indurated sedimentary rock consisting essentially of quartz, feldspar, and fragments of other rock types.
Head grade:	The grade of the ore as delivered to the metallurgical plant.
Hydrothermal:	Pertaining to the action of hot aqueous solutions on rocks.
Igneous:	A rock or mineral that solidified from molten or partially molten material.
In situ:	In place or within unbroken rock or still in the ground.
Kriging:	An interpolation method that minimizes the estimation error in the determination of reserves.
Landsat:	Spectral images of the Earth's surface.
Leaching:	Dissolution of gold from the crushed and milled material, including reclaimed slime, for absorption and concentration on to the activated carbon.
Lower proterozoic:	Era of geological time between 2.5 billion and 1.8 billion years before the present.

iii

Table of Contents

Measures: Conversion factors from metric units to US units are provided below:

Metric Unit		US Equivalent
1 tonne	= 1 t	= 1.10231 tons
1 gram	= 1 g	= 0.03215 ounces
1 gram per tonne	= 1 g/t	= 0.02917 ounces per ton
1 kilogram per tonne	= 1 kg/t	= 29.16642 ounces per ton
1 kilometer	= 1 km	= 0.621371 miles
1 meter	= 1 m	= 3.28084 feet
1 centimeter	= 1 cm	= 0.3937 inches
1 millimeter	= 1 mm	= 0.03937 inches
1 square kilometer	= 1 sq km	= 0.3861 square miles

Metamorphism:	A change in the structure or constitution of a rock due to natural agencies, such as pressure and heat.
Mill delivered tonnes:	A quantity, expressed in tonnes, of ore delivered to the metallurgical plant.
Milling/mill:	The comminution of the ore, although the term has come to cover the broad range of machinery inside the treatment plant where the gold is separated from the ore.
Mineable:	That portion of a mineralized deposit for which extraction is technically and economically feasible.
Mineralization:	The presence of a target mineral in a mass of host rock.
Mineralized material:	A mineralized body which has been delineated by appropriately spaced drilling and/or underground sampling to support a sufficient tonnage and average grade of metals to warrant further exploration. A deposit of mineralized material does not qualify as a reserve until a comprehensive evaluation based upon unit cost, grade, recoveries, and other material factors conclude legal and economic feasibility.
Moz:	Million troy ounces.
Mt:	Million metric tonnes.
Open pit:	Mining in which the ore is extracted from a pit. The geometry of the pit may vary with the characteristics of the orebody.
Orebody:	A continuous, well-defined mass of material containing sufficient minerals of economic value to make extraction economically feasible.
Orogenic:	Of or related to mountain building, such as when a belt of the Earth's crust is compressed by lateral forces to form a chain of mountains.

iv

Table of Contents

Ounce:	One troy ounce, which equals 31.1035 grams.
Oxide Ore:	Soft, weathered rock that is oxidized.
Payshoot:	A defined zone of economically viable mineralization.
Portal:	An entrance to a tunnel or mine.
Probable reserves:	Reserves for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling, and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.
Prospect:	An area of land with insufficient data available on the mineralization to determine if it is economically recoverable, but warranting further investigation.

Prospecting license or permits:	An area for which permission to explore has been granted.
PL:	Prospecting License.
PLR:	Prospecting License (reconnaissance).
Proven reserves:	Reserves for which quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling; and the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well-established.
Pyrite:	A brassy-colored mineral of iron sulphide (compound of iron and sulfur).
Quartz:	A mineral compound of silicon and oxygen.
Quartzite:	Metamorphic rock with interlocking quartz grains displaying a mosaic texture.
Refining:	The final stage of metal production in which final impurities are removed from the molten metal by introducing air and fluxes. The impurities are removed as gases or slag.
Regolith:	Weathered products of fresh rock, such as soil, alluvium, colluvium, sands, and hardened oxidized materials.
Rehabilitation:	The process of restoring mined land to a condition approximating its original state.

v

Table of Contents

Reserve:	That part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination.
Reverse circulation (RC) drilling:	A drilling method.
Rotary Air Blast (RAB) drilling:	A drilling method.
Sampling:	Taking small pieces of rock at intervals along exposed mineralization for assay (to determine the mineral content).
Sedimentary:	Pertaining to or containing sediment. Used in reference to rocks which are derived from weathering and are deposited by natural agents, such as air, water and ice.
Shear zone:	An elongated area of structural deformation.
Silica:	A naturally occurring dioxide of silicon.
Sinistral:	Of, pertaining to, or on the left side.
Stockpile:	A store of unprocessed ore.
Stripping:	The process of removing overburden to expose ore.
Stripping ratio:	Ratio of waste material to ore material in an open pit mine.
Sulphide:	

	A mineral characterized by the linkages of sulfur with a metal or semi-metal, such as pyrite or iron sulphide. Also a zone in which sulfide minerals occur.
Tailings:	Finely ground rock from which valuable minerals have been extracted by milling.
Tonalite:	A type of igneous rock.
Tonnage:	Quantities where the ton or tonne is an appropriate unit of measure. Typically used to measure reserves of gold-bearing material in situ or quantities of ore and waste material mined, transported or milled.
Tonne:	One tonne is equal to 1,000 kilograms (also known as a “metric” ton).
Total cash costs:	Total cash costs, as defined in the Gold Institute standard, include mine production, transport and refinery costs, general and administrative costs, movement in production inventories and ore stockpiles, transfers to and from deferred stripping where relevant and royalties.

vi

Table of Contents

Trend:	The arrangement of a group of ore deposits or a geological feature or zone of similar grade occurring in a linear pattern.
Waste:	Rock mined with an insufficient gold content to justify processing.
Weathered:	Rock broken down by erosion.

Statements in this Annual Report concerning our business outlook or future economic performance; anticipated revenues, expenses or other financial items; and statements concerning assumptions made or expectations as to any future events, conditions, performance or other matters, are “forward-looking statements” as that term is defined under the United States federal securities laws. Forward-looking statements are subject to risks, uncertainties and other factors which could cause actual results to differ materially from those stated in such statements. Factors that could cause or contribute to such differences include, but are not limited to, those set forth under “Item 3. Key Information — D. Risk Factors” in this Annual Report as well as those discussed elsewhere in this Annual Report and in our other filings with the Securities and Exchange Commission.

We are incorporated under the laws of Jersey, Channel Islands with the majority of our operations located in West Africa. Our books of account are maintained in US dollars and our annual and interim financial statements are prepared on a historical cost basis in accordance with International Financial Reporting Standards, or IFRS. IFRS differs in significant respects from generally accepted accounting principles in the United States, or US GAAP. This

Annual Report includes a discussion of the relevant differences between IFRS and US GAAP, and Note 27 to our audited consolidated financial statements included in this Annual Report sets forth a reconciliation from IFRS to US GAAP of net income and shareholders' equity. We have also included in this Annual Report the audited financial information for the years ended December 31, 2006, 2005 and 2004 of Société des Mines de Morila SA, or Morila SA. The financial information included in this Annual Report has been prepared in accordance with IFRS and, except where otherwise indicated, is presented in US dollars. For a definition of cash costs, please see "Item 3. Key Information — A. Selected Financial Data".

Unless the context otherwise requires, "us", "we", "our", or words of similar import, refer to Randgold Resources Limited and its subsidiaries and affiliated companies.

PART I

Item 1. Identity of Directors, Senior Management and Advisers

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information

A. SELECTED FINANCIAL DATA

The following selected historical consolidated financial data have been derived from, and should be read in conjunction with, the more detailed information and financial statements, including our audited consolidated financial statements for the years ended December 31, 2006, 2005, and 2004 and as at December 31, 2006 and 2005, which appear elsewhere in this Annual Report. The historical consolidated financial data as at December 31, 2004, 2003 and 2002, and for the years ended December 31, 2004 and 2003 have been derived from our audited consolidated financial statements not included in this Annual Report, as adjusted for the accounting changes relating to stripping costs under IFRS and US GAAP and the adoption of SFAS No. 123R "Share-based Payments", or SFAS No. 123R, under US GAAP.

The financial data have been prepared in accordance with IFRS, unless otherwise noted. In Note 27 to our audited consolidated financial statements, we present the principal differences between IFRS and US GAAP and a reconciliation of our net income attributable to equity shareholders and shareholders' equity to US GAAP.

Table of Contents

1. Total cash cost and total cash cost per ounce are non-GAAP measures. We have calculated total cash costs and total cash costs per ounce using guidance issued by the Gold Institute. The Gold Institute was a non profit industry association comprised of leading gold producers, refiners, bullion suppliers and manufacturers. This institute has now been incorporated into the National Mining Association. The guidance was first issued in 1996 and revised in November 1999. Total cash costs, as defined in the Gold Institute's guidance, include mine production, transport and refinery costs, general and administrative costs, movement in production inventories and ore stockpiles, transfers to and from deferred stripping where relevant, and royalties. Under the company's revised accounting policies, there are no transfers to and from deferred stripping. Total cash costs per ounce are calculated by dividing total cash costs, as determined using the Gold Institute guidance, by gold ounces produced for the periods presented. We have calculated total cash costs and total cash costs per ounce on a consistent basis for all periods presented. Total cash costs and total cash costs per ounce should not be considered by investors as an alternative to net profit attributable to shareholders, as an alternative to other IFRS or US GAAP measures or an indicator of our performance. The data does not have a meaning prescribed by IFRS or US GAAP and therefore amounts presented may not be comparable to data presented by gold producers who do not follow the guidance provided by the Gold Institute. In particular depreciation, amortization and share-based payments would be included in a measure of total costs of producing gold under IFRS and US GAAP, but are not included in total cash costs under the guidance provided by the Gold Institute. Furthermore, while the Gold Institute has provided a definition for the calculation of total cash costs and total cash costs per ounce, the calculation of these numbers may vary from company to company and may not be comparable to other similarly titled measures of other companies. However, we believe that total cash costs per ounce is a useful indicator to investors and management of a mining company's performance as it provides an indication of a company's profitability and efficiency, the trends in cash costs as the company's operations mature, and a benchmark of performance to allow for comparison against other companies. Within this annual report our discussion and analysis is focused on the "total cash cost" measure as defined by the Gold Institute.

The following table lists the costs of producing gold, determined in accordance with IFRS, and reconciles this GAAP measure to total cash costs as defined by the Gold Institute's guidance, as a non-GAAP measure, for each of the periods set forth below:

Costs	Year Ended December 31, 2006	Year Ended December 31, 2005	Year Ended December 31, 2004	Year Ended December 31, 2003	Year Ended December 31, 2002
	(In thousands, except per ounce data)				
Mine production costs	\$ 115,217	\$ 66,612	\$ 37,468	\$ 26,195	\$ 22,706
Depreciation and amortization	22,844	11,910	8,738	10,269	8,765
General and administration expenses	13,006	7,438	6,809	6,108	4,128
Transport and refinery costs	711	360	233	408	588
Royalties	16,979	10,273	5,304	7,648	9,185

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Movement in production inventory and ore stockpiles	(13,373)	(18,744)†	(7,425)†	(5,115)†	(1,756)†
Total cost of producing gold determined in accordance with IFRS	155,384	77,849†	51,127†	45,513†	43,616†
Less: Non-cash costs included in total cost of producing gold:

Total cash costs using the Gold Institute's guidance	132,540	65,939†	42,389†	35,244†	34,851†
Ounces produced*	448,242	328,428	204,194	317,596	421,127
Total production cost per ounce under IFRS	347	237†	250†	143†	104†
Total cash cost per ounce	296	201†	208†	111†	83†

† Restated due to change in accounting policy relating to stripping costs. Refer to note 6 of our audited consolidated financial statements.

* 40% share of Morila and 100% share of Loulo.

3

Table of Contents

2. Under IFRS, we account for our interest in Morila Limited using the proportionate consolidation method, whereby our proportionate share of Morila Limited's assets, liabilities, income, expenses and cash flows are incorporated in our consolidated financial statements under the appropriate headings. Under US GAAP, we equity account our interest in Morila Limited. This requires that we recognize our share of Morila Limited's net profit as a separate line item in the income statement. In the balance sheet, we reflect as an investment our share of Morila Limited's net assets. While this results in significantly different financial statement presentation between IFRS and US GAAP, it has no impact on our net income or our net asset value, except for any difference between IFRS and US GAAP which relates to Morila.

3. Effective June 11, 2004, we undertook a split of our ordinary shares, which increased our issued share capital from 29,273,685 to 58,547,370 ordinary shares. In connection with this share split our ordinary shareholders of record on June 11, 2004 received two \$0.05 ordinary shares for every one \$0.10 ordinary share they held. See "Item 4. Information on the Company — A. History and Development of the Company".

B. CAPITALIZATION AND INDEBTEDNESS

Not applicable.

C. REASONS FOR THE OFFER AND USE OF PROCEEDS

Not applicable.

D. RISK FACTORS

In addition to the other information included in this Annual Report, you should carefully consider the following factors, which individually or in combination could have a material adverse effect on our business, financial condition and results of operations. There may be additional risks and uncertainties not presently known to us, or that we currently see as immaterial, which may also harm our business. If any of the risks or uncertainties described below or any such additional risks and uncertainties actually occur, our business, results of operations and financial condition

could be materially and adversely affected. In this case, the trading price of our ordinary shares and American Depository Shares could decline and you might lose all or part of your investment.

Risks Relating to Our Operations

The profitability of our operations, and the cash flows generated by our operations, are affected by changes in the market price for gold which in the past has fluctuated widely.

Substantially all of our revenues and cash flows have come from the sale of gold. Historically, the market price for gold has fluctuated widely and has been affected by numerous factors over which we have no control, including:

- the demand for gold for industrial uses and for use in jewelry;
- international or regional political and economic trends;
- the strength of the US dollar, the currency in which gold prices generally are quoted, and of other currencies;
- financial market expectations regarding the rate of inflation;
- interest rates;
- speculative activities;
- actual or expected purchases and sales of gold bullion holdings by central banks or other large gold bullion holders or dealers;
- hedging activities by gold producers; and
- the production and cost levels for gold in major gold-producing nations.

4

Table of Contents

The volatility of gold prices is illustrated in the following table, which shows the annual high, low and average of the afternoon London Bullion Market fixing price of gold in US dollars for the past ten years.

Year	Price Per Ounce (\$)		
	High	Low	Average
1996	415	367	388
1997	367	283	331
1998	313	273	294
1999	326	253	279
2000	313	264	279
2001	293	256	271
2002	349	278	310
2003	416	320	363
2004	454	375	409
2005	537	411	444
2006	725	525	604

In addition, the current demand for, and supply of, gold affects the price of gold, but not necessarily in the same manner as current demand and supply affect the prices of other commodities. Historically, gold has tended to retain its value in relative terms against basic goods in times of inflation and monetary crisis. As a result, central banks,

financial institutions, and individuals hold large amounts of gold as a store of value, and production in any given year constitutes a very small portion of the total potential supply of gold. Since the potential supply of gold is large relative to mine production in any given year, normal variations in current production will not necessarily have a significant effect on the supply of gold or its price.

If gold prices should fall below and remain below our cost of production for any sustained period we may experience losses, and if gold prices should fall below our cash costs of production we may be forced to curtail or suspend some or all of our mining operations. In addition, we would also have to assess the economic impact of low gold prices on our ability to recover from any losses we may incur during that period and on our ability to maintain adequate reserves. Our total cash cost of production per ounce of gold sold was \$296 in the year ended December 31, 2006, \$201 in the year ended December 31, 2005, and \$208 in the year ended December 31, 2004. We expect that Morila's cash costs per ounce will rise as the life of the mine advances as a result of expected declining grade, which will adversely affect our profitability in the absence of any mitigating factors. We do not envisage a major increase in Loulo's cash costs as the life of mine advances, as the higher grades expected from the underground mining should offset increases in costs.

Our mining operations may yield less gold under actual production conditions than indicated by our gold reserve figures, which are estimates based on a number of assumptions, including assumptions as to mining and recovery factors, production costs and the price of gold.

The ore reserve estimates contained in this Annual Report are estimates of the mill delivered quantity and grade of gold in our deposits and stockpiles. They represent the amount of gold that we believe can be mined, processed and sold at prices sufficient to recover our estimated total cash costs of production, remaining investment and anticipated additional capital expenditures. Our ore reserves are estimated based upon many factors, including:

- the results of exploratory drilling and an ongoing sampling of the orebodies;
- past experience with mining properties;
- gold price; and
- operating costs.

Because our ore reserve estimates are calculated based on current estimates of future production costs and gold prices, they should not be interpreted as assurances of the economic life of our gold deposits or the profitability of our future operations.

5

Table of Contents

Reserve estimates may require revisions based on actual production experience. Further, a sustained decline in the market price of gold may render the recovery of ore reserves containing relatively lower grades of gold mineralization uneconomical and ultimately result in a restatement of reserves. The failure of the reserves to meet our recovery expectations may have a materially adverse effect on our business, financial condition and results of operations.

The profitability of operations and the cash flows generated by these operations are significantly affected by the fluctuations in the price, cost and supply of inputs.

Fuel, power and consumables, including diesel, steel, chemical reagents, explosives and tires, form a relatively large part of the operating costs of any mining company. The cost of these consumables is impacted, to a greater or lesser

extent, by fluctuations in the price of oil, exchange rates and a shortage of supplies.

Such fluctuations have a significant impact upon the operating costs and capital expenditure estimates and, in the absence of other economic fluctuations, could result in significant changes in the total expenditure estimates for mining projects, new and existing, and could even render certain projects non-viable. In addition, while our revenue is derived from the sale of gold in US dollars, a significant portion of our input costs are incurred in currencies other than the dollar. Accordingly, any appreciation in such other currencies could adversely affect our results of operations.

Our business may be harmed if the Government of Mali fails to repay fuel duties owing to Morila and Loulo.

Up to November 2005, Morila was responsible for paying to diesel suppliers the customs duties which are then paid to the Government of Mali. Our operations at Morila and Loulo can claim reimbursement of these duties from the Government of Mali on presentation of a certificate from Société Générale de Surveillance. During the third quarter 2003, the Government of Mali began to reduce payments to all the mines in Mali due to irregularities involving certain small exploration companies. The Government of Mali has since given full exoneration from fuel duties to the mining industry so that fuel duties are no longer payable. However, significant amounts of previously paid duties remain outstanding. Our share of the amounts owing to Morila was \$5.6 million on December 31, 2006 and \$4.7 million on March 31, 2007. Amounts owing to Loulo were \$4.1 million on December 31, 2006 and \$4.1 million on March 31, 2007.

If we are unable to recover these amounts, then our results of operations and financial position would be adversely affected, as would our ability to pay dividends to our shareholders. Accordingly, our business, cash flows and financial condition will be adversely affected if anticipated dividends are not paid.

Our business may be harmed if the Government of Mali fails to repay Value Added Tax, or TVA, owing to Morila.

Our mining companies operating in Mali are exonerated by their Establishment Conventions from TVA for the three years following first commercial production. After that TVA is payable and reimbursable. TVA is only reclaimable insofar as it is expended in the production of income.

A key aspect in TVA recovery is managing the completion of the Government of Mali's audit of the taxpayer's payments, at which time the Government of Mali recognizes a liability. Unfortunately the Government of Mali did not complete its audit of Morila in 2006.

Morila has concluded a re-imburement protocol with the Government of Mali for all TVA owing to June 2005 and is in negotiation to conclude a further protocol to bring this up to date. At December 31, 2006, the TVA owed by the Government of Mali to Morila stood at \$40.8 million, which amount has increased by \$3.7 million to \$44.5 million at April 30, 2007.

If Morila is unable to recover these funds, then its results of operations and financial position would be adversely affected, as would its ability to pay dividends to its shareholders. Accordingly, our business, cash flows and financial condition will be adversely affected if anticipated dividends are not paid.

6

Table of Contents

We may not be able to recover certain funds from MDM Ferroman (Pty) Limited.

In August 2004, we entered into a fixed lump sum turnkey contract for \$63 million for the design, supply, construction and commissioning of the Loulo processing plant and infrastructure with MDM Ferroman (Pty) Ltd, or MDM. At the end of 2005, after making advances and additional payments to MDM totaling \$26 million in excess of the contract, we determined that MDM was unable to perform its obligations under the MDM Contract, at which time we enforced a contractual remedy which allowed us to act as our own general contractor and to complete the remaining work on the Loulo project that was required under the MDM Contract.

We believe that we are entitled to recover certain amounts from MDM, including advances of \$12.1 million (2005: \$12.2 million) included in receivables. Of this latter amount, \$7 million is secured by performance bonds and the remainder is secured by various personal guarantees and other assets.

As part of our efforts to recoup the monies owed to us, MDM was put into liquidation on February 1, 2006. This resulted in a South African Companies Act Section 417 investigation into the business and financial activities of MDM, its affiliated companies and their directors. This investigation is ongoing, and the liquidators are not expected to release a statement of MDM's assets and liabilities until the investigation has been completed.

We believe that we will be able to recover in full the \$12.1 million included in receivables. However, this is dependent on the amounts which can be recovered from the performance bonds, personal guarantees and other assets provided as security. Any shortfall is expected to be recovered from any free residue accruing to the insolvent estate. The aggregate amount which will ultimately be recovered cannot presently be determined. The financial statements do not reflect any additional provision that may be required if the \$12.1 million cannot be recovered in full. Our results of operations may be adversely affected if we are unable to recover the amounts advanced by us to MDM. Any part of the \$12.1 million included in accounts receivable which cannot in fact be recovered will need to be charged as an expense.

Recovery of any amounts in excess of our claim for recovery of the \$12.1 million is dependent on the extent to which our claim is accepted by the liquidators and the amount in the free residue. The ultimate outcome of this claim cannot presently be determined and there is significant uncertainty surrounding the amount that will ultimately be recovered.

We may incur losses or lose opportunities for gains as a result of our use of our derivative instruments to protect us against low gold prices.

We use derivative instruments to protect the selling price of some of our anticipated gold production at Loulo. The intended effect of our derivative transactions is to lock in a fixed sale price for some of our future gold production to provide some protection against a subsequent fall in gold prices. No such protection is in place for our production at Morila.

Derivative transactions can result in a reduction in revenue if the instrument price is less than the market price at the time the hedged sales are recognized. Moreover, our decision to enter into a given instrument is based upon market assumptions. If these assumptions are not met, significant losses or lost opportunities for significant gains may result. In all, the use of these instruments may result in significant losses which will prevent us from realizing the positive impact of any subsequent increase in the price of gold on the portion of production covered by the instrument.

Our underground project at Loulo, developing two mines at Yalea and Gara, is subject to all of the risks associated with underground mining.

We have determined to develop, construct and operate underground mines at Yalea and Gara. At Yalea, first ore is expected at the end of 2007, with full production scheduled for the beginning of 2009. At Gara, production is expected at the end of 2009. These planned mines represent our entry into the business of underground mining. In connection with the development of the underground mines, we must build the necessary infrastructure, the costs of which are substantial. The underground mines may experience unexpected problems and delays during their development and

construction.

7

Table of Contents

Delays in the commencement of gold production could occur and the development costs could be larger than expected, which could affect our results of operations and profitability.

The business of underground mining by its nature involves significant risks and hazards. In particular, as the development commences the operation could be subject to:

- Rockbursts;
- Seismic events;
- Underground fires;
- Cave-ins or falls of ground;
- Discharges of gases or toxic chemicals;
- Flooding;
- Accidents; and
- Other conditions resulting from drilling, blasting and the removal of material from an underground mine.

We are at risk of experiencing any and all of these hazards. The occurrence of any of these hazards could delay the development of the mine, production, increase cash operating costs and result in additional financial liability for us.

Actual cash costs of production, production results and economic returns may differ significantly from those anticipated by our feasibility studies for new development projects, including Tongon.

It can take a number of years from initial feasibility studies until development is completed and, during that time, the economic feasibility of production may change. In addition, there are a number of uncertainties inherent in the development and construction of any new mine, including:

- the availability and timing of necessary environmental and governmental permits;
- the timing and cost necessary to construct mining and processing facilities, which can be considerable;
- the availability and cost of skilled labor, power, water and other materials;
- the accessibility of transportation and other infrastructure, particularly in remote locations; and
- the availability of funds to finance construction and development activities.

At our Tongon project in Côte d'Ivoire, we are progressing with a drilling program that will form the basis of a final feasibility study for the development of a mine. The completion of the feasibility study is dependent in large part on the political situation in that country. Accordingly, the success of any mining operation at our Tongon project is subject to the uncertainties stated above, as well as the risks presented by the political situation in that country. We cannot provide any assurance that we will complete a final feasibility study at Tongon, or that the project will ultimately result in a new commercial mining operation.

We conduct mining, development and exploration activities in countries with developing economies and are subject to the risks of political and economic instability associated with these countries.

We currently conduct mining, development and exploration activities in countries with developing economies. These countries and other emerging markets in which we may conduct operations have, from time to time, experienced economic or political instability. It is difficult to predict the future political, social and economic direction of the countries in which we operate, and the impact government decisions may have on our business. Any political or economic instability in the countries in which we currently operate could have a material and adverse effect on our business and results of operations.

8

Table of Contents

The countries of Mali, Senegal, Burkina Faso and Côte d'Ivoire have, since independence, experienced some form of political upheaval with varying forms of changes of government taking place. Côte d'Ivoire has experienced several years of political chaos, including an attempted coup d'état. The conflict in Côte d'Ivoire resulted in us suspending work in the country pending a peaceful solution. As a result, the progress of the Tongon feasibility study has been delayed.

Goods are supplied to our operations in Mali through Ghana, Burkina Faso and Senegal, which routings have to date functioned satisfactorily. Our operations at Morila have been adversely affected by the higher transportation costs for diesel that now has to be delivered via Togo or Senegal. Any present or future policy changes in the countries in which we operate may in some way have a significant effect on our operations and interests.

The mining laws of Mali, Côte d'Ivoire, Senegal, Burkina Faso, Ghana and Tanzania stipulate that should an economic orebody be discovered on a property subject to an exploration permit, a permit that allows processing operations to be undertaken must be issued to the holder. Except for Tanzania, legislation in these countries currently provides for the relevant government to acquire a free ownership interest, normally of at least 10%, in any mining project. For example, the Malian government holds a 20% interest in Morila SA and Somilo SA, and cannot be diluted below 10%, as a result of this type of legislation. The requirements of the various governments as to the foreign ownership and control of mining companies may change in a manner which adversely affects us.

Under our joint venture agreement with AngloGold Ashanti Limited, or AngloGold Ashanti, we jointly manage Morila Limited, and any disputes with AngloGold Ashanti over the management of Morila Limited could adversely affect our business.

We jointly control Morila Limited with AngloGold Ashanti under a joint venture agreement. Under the joint venture agreement, AngloGold Ashanti is responsible for the day-to-day operations of Morila, subject to the overall management control of the Morila Limited board. Substantially all major management decisions, including approval of a budget for Morila, must be approved by the Morila Limited board. We and AngloGold Ashanti retain equal control over the board, with neither party holding a deciding vote. If a dispute arises between us and AngloGold Ashanti with respect to the management of Morila Limited and we are unable to amicably resolve the dispute, we may have to participate in arbitration or other proceeding to resolve the dispute, which could materially and adversely affect our business.

The use of mining contractors at certain of our operations may expose it to delays or suspensions in mining activities.

Mining contractors are used at Loulo and Morila to mine and deliver ore to processing plants. Consequently, at these mines, we do not own all of the mining equipment and may face disruption of operations and incur costs and liabilities in the event that any of the mining contractors at these mines has financial difficulties, or should there be a dispute in

renegotiating a mining contract, or a delay in replacing an existing contractor.

We may be required to seek funding from third parties or enter into joint development arrangements to finance the development of our properties and the timely exploration of our mineral rights, which funding or development arrangements may not be available on acceptable terms, or at all.

In some countries, if we do not conduct any mineral exploration on our mineral holdings or make the required payments in lieu of completing mineral exploration, these mineral holdings will lapse and we will lose all interest that we have in these mineral rights.

We may not pay dividends to shareholders in the near future.

We paid our first dividend to ordinary shareholders in March 2007. It is our policy to pay dividends if profits and funds are available for that purpose. Whether or not funds are available depends on a variety of factors. We cannot guarantee that dividends will be paid in the future.

If we are unable to attract and retain key personnel our business may be harmed.

Our ability to bring additional mineral properties into production and explore our extensive portfolio of mineral rights will depend, in large part, upon the skills and efforts of a small group of

9

Table of Contents

management and technical personnel, including D. Mark Bristow, our Chief Executive Officer. If we are not successful in retaining or attracting highly qualified individuals in key management positions our business may be harmed. The loss of any of our key personnel could adversely impact our ability to execute our business plan.

Our insurance coverage may prove inadequate to satisfy future claims against us.

We may become subject to liabilities, including liabilities for pollution or other hazards, against which we have not insured adequately or at all or cannot insure. Our insurance policies contain exclusions and limitations on coverage. Our current insurance policies provide worldwide indemnity of £50 million in relation to legal liability incurred as a result of death, injury, disease of persons and/or loss of or damage to property. Main exclusions under this insurance policy, which relates to our industry, include war, nuclear risks, silicosis, asbestosis or other fibrosis of the lungs or diseases of the respiratory system with regard to employees, and gradual pollution. In addition, our insurance policies may not continue to be available at economically acceptable premiums. As a result, in the future our insurance coverage may not cover the extent of claims against us.

It may be difficult for you to affect service of process and enforce legal judgments against us or our affiliates.

We are incorporated in Jersey, Channel Islands and a majority of our directors and senior executives are not residents of the United States. Virtually all of our assets and the assets of those persons are located outside the United States. As a result, it may not be possible for you to effect service of process within the United States upon those persons or us. Furthermore, the United States and Jersey currently do not have a treaty providing for the reciprocal recognition and enforcement of judgments (other than arbitration awards) in civil and commercial matters. Consequently, it may not be possible for you to enforce a final judgment for payment rendered by any federal or state court in the United States

based on civil liability, whether or not predicated solely upon United States Federal securities laws against those persons or us.

In order to enforce any judgment rendered by any Federal or state court in the United States in Jersey, proceedings must be initiated by way of common law action before a court of competent jurisdiction in Jersey. The entry of an enforcement order by a court in Jersey is conditional upon the following:

- the court which pronounced the judgment has jurisdiction to entertain the case according to the principles recognized by Jersey law with reference to the jurisdiction of the foreign courts;
- the judgment is final and conclusive — it cannot be altered by the courts which pronounced it;
- there is payable pursuant to a judgment a sum of money, not being a sum payable in respect of tax or other charges of a like nature or in respect of a fine or other penalty;
- the judgment has not been prescribed;
- the courts of the foreign country have jurisdiction in the circumstances of the case;
- the judgment was not obtained by fraud; and
- the recognition and enforcement of the judgment is not contrary to public policy in Jersey, including observance of the rules of natural justice which require that documents in the United States proceeding were properly served on the defendant and that the defendant was given the right to be heard and represented by counsel in a free and fair trial before an impartial tribunal.

Furthermore, it is doubtful whether you could bring an original action based on United States Federal securities laws in a Jersey court.

We are subject to significant corporate regulation as a public company and failure to comply with all applicable regulations could subject us to liability or negatively affect our share price.

As a publicly traded company, we are subject to a significant body of regulation, including the US Sarbanes-Oxley Act of 2002. While we have developed and instituted a corporate compliance

10

Table of Contents

program based on what we believe are the current best practices in corporate governance and continue to update this program in response to newly implemented or changing regulatory requirements, we cannot provide assurance that we are or will be in compliance with all potentially applicable corporate regulations. For example, we cannot provide assurance that in the future our management will not find a material weakness in connection with its annual review of our internal control over financial reporting pursuant to Section 404 of the US Sarbanes-Oxley Act. We also cannot provide assurance that our independent auditors will not issue qualified attestation reports on our management's assessment on the operating effectiveness of our internal controls over financial reporting. If we fail to comply with any of these regulations, we could be subject to a range of regulatory actions, fines or other sanctions or litigation. If we must disclose any material weakness in our internal control over financial reporting, our share price could decline.

Risks Relating to Our Industry

The exploration of mineral properties is highly speculative in nature, involves substantial expenditures, and is frequently unproductive.

Exploration for gold is highly speculative in nature. Our future growth and profitability will depend, in part, on our ability to identify and acquire additional mineral rights, and on the costs and results of our continued exploration and development programs. Many exploration programs, including some of ours, do not result in the discovery of mineralization and any mineralization discovered may not be of sufficient quantity or quality to be profitably mined. Our mineral exploration rights may not contain commercially exploitable reserves of gold. Uncertainties as to the metallurgical recovery of any gold discovered may not warrant mining on the basis of available technology. Our operations are subject to all of the operating hazards and risks normally incident to exploring for and developing mineral properties, such as:

- encountering unusual or unexpected formations;
- environmental pollution;
- personal injury and flooding; and
- decrease in reserves due to a lower gold price.

If we discover a viable deposit, it usually takes several years from the initial phases of exploration until production is possible. During this time, the economic feasibility of production may change.

Moreover, we will use the evaluation work of professional geologists, geophysicists, and engineers for estimates in determining whether to commence or continue mining. These estimates generally rely on scientific and economic assumptions, which in some instances may not be correct, and could result in the expenditure of substantial amounts of money on a deposit before it can be determined whether or not the deposit contains economically recoverable mineralization. As a result of these uncertainties, we may not successfully acquire additional mineral rights, or identify new proven and probable reserves in sufficient quantities to justify commercial operations in any of our properties.

If management determines that capitalized costs associated with any of our gold interests are not likely to be recovered, we would recognize an impairment provision against the amounts capitalized for that interest. All of these factors may result in losses in relation to amounts spent which are found not to be recoverable.

Title to our mineral properties may be challenged which may prevent or severely curtail our use of the affected properties.

Title to our properties may be challenged or impugned, and title insurance is generally not available. Each sovereign state is the sole authority able to grant mineral property rights, and our ability to ensure that we have obtained secure title to individual mineral properties or mining concessions may be severely constrained. Our mineral properties may be subject to prior unregistered agreements, transfers or claims, and title may be affected by, among other things, undetected defects. In addition, we may be unable to operate our properties as permitted or to enforce our rights with respect to our properties.

11

Table of Contents

Our ability to obtain desirable mineral exploration projects in the future may be adversely affected by competition from other exploration companies.

In conducting our exploration activities, we compete with other mining companies in connection with the search for and acquisition of properties producing or possessing the potential to produce gold. Existing or future competition in

the mining industry could materially and adversely affect our prospects for mineral exploration and success in the future.

Our operations are subject to extensive governmental and environmental regulations, which could cause us to incur costs that adversely affect our results of operations.

Our mining facilities and operations are subject to substantial government laws and regulations, concerning mine safety, land use and environmental protection. We must comply with requirements regarding exploration operations, public safety, employee health and safety, use of explosives, air quality, water pollution, noxious odor, noise and dust controls, reclamation, solid waste, hazardous waste and wildlife as well as laws protecting the rights of other property owners and the public.

Any failure on our part to be in compliance with these laws, regulations, and requirements with respect to our properties could result in us being subject to substantial penalties, fees and expenses, significant delays in our operations or even the complete shutdown of our operations. We provide for estimated environmental rehabilitation costs when the related environmental disturbance takes place. Estimates of rehabilitation costs are subject to revision as a result of future changes in regulations and cost estimates. The costs associated with compliance with government regulations may ultimately be material and adversely affect our results of operations and financial condition.

If our environmental and other governmental permits are not renewed or additional conditions are imposed on our permits, our financial condition and results of operations may be adversely affected.

Generally, compliance with environmental and other government regulations requires us to obtain permits issued by governmental agencies. Some permits require periodic renewal or review of their conditions. We cannot predict whether we will be able to renew these permits or whether material changes in permit conditions will be imposed. Non-renewal of a permit may cause us to discontinue the operations requiring the permit, and the imposition of additional conditions on a permit may cause us to incur additional compliance costs, either of which could have a material adverse effect on our financial condition and results of operations.

Labor disruptions could have an adverse effect on our operating results and financial condition.

All Malian national employees are members of the Union Nationale des Travailleurs du Mali, or UNTM. Due to the number of employees that belong to UNTM, we are at risk of having Morila and Loulo's mining and exploration operations stopped for indefinite periods due to strikes and other labor disputes. Should any labor disruptions occur, our results of operations and financial condition could be materially and adversely affected.

AIDS poses risks to us in terms of productivity and costs.

The incidence of AIDS in Mali, which has been forecasted to increase over the next decade, poses risks to us in terms of potentially reduced productivity and increased medical and insurance costs. The exact extent to which our workforce is infected is not known at present. The prevalence of AIDS could become significant. Significant increases in the incidence of AIDS infection and AIDS-related diseases among members of our workforce in the future could adversely impact our operations and financial condition.

Item 4. Information on the Company

A. HISTORY AND DEVELOPMENT OF THE COMPANY

Randgold Resources Limited was incorporated under the laws of Jersey, Channel Islands in August 1995, to engage in the exploration and development of gold deposits in Sub-Saharan Africa. Our principal executive offices are located at La Motte Chambers, La Motte Street, St. Helier, Jersey, JE1 1BJ, Channel Islands and our telephone number is (011 44) 1534 735-333. Our agent in the United States is CT Corporation System, 111 Eighth Avenue, New York, New York 10011.

We discovered the Morila deposit during December 1996 and we subsequently financed, built and commissioned the Morila mine.

During July 2000, we concluded the sale of 50% of our interest in Morila Limited (and also a shareholder loan made by us to Morila Limited) to AngloGold Ashanti for \$132 million in cash.

We have an 80% controlling interest in Société des Mines de Loulo S.A., or Somilo, through a series of transactions culminating in April 2001. The new Loulo mine commenced operations in October 2005 and mines the Gara (formerly Loulo 0) and Yalea deposits. We discovered the Yalea deposit in 1997.

We conduct our mining operations through:

- a 50% joint venture interest in Morila Limited (which in turn owns an 80% interest in the Morila mine); and
- a controlling interest in Somilo, the Yalea and Loulo 0 deposits and further exploration within the greater lease area situated within the Loulo permit.

In July 2002, we completed a public offering of 5,000,000 of our ordinary shares, including American Depositary Shares, or ADSs, resulting in gross proceeds to us of \$32.5 million. These proceeds were used to repay a syndicated term loan and revolving credit facility in November 2002 and for feasibility studies and development activities. In connection with this offering, we listed our ADSs on the Nasdaq National Market.

In April 2003, we entered into a heads of agreement with Resolute Mining Limited, or Resolute. Under this agreement we gave Resolute a 12 month option to acquire our entire interest in our wholly-owned subsidiary, Randgold Resources (Somisy) Limited, or RRL Somisy, for \$6 million, plus a quarterly royalty payment based on the gold price, and the assumption of certain liabilities. RRL Somisy owned 80% of Somisy which owned the Syama mine.

As of June 13, 2003, Randgold & Exploration owned approximately 43% of our outstanding share capital. Since that time, a number of transactions have taken place resulting in all of our shares which were held by Randgold & Exploration being sold. Currently Randgold & Exploration has no interest in us.

In February 2004, we announced that we would develop a new mine at Loulo in western Mali. Construction continued through 2005 and the new open pit mine went into production in October 2005. In addition, our board agreed to proceed with the development of the underground mine and, after the award of the development contract, work commenced with the construction of the boxcut at the Yalea mine. This boxcut has been completed and the first blast into hard rock took place on December 22, 2006. First ore is expected towards the end of this year and full production is scheduled for 2009. Development at Loulo's second underground mine, Gara, is due to start at the beginning of 2009 with first ore being delivered to the plant by the end of that year.

In April 2004, Resolute exercised its option to acquire the Syama mine. Resolute has subsequently paid us \$6 million in cash and has assumed liabilities of \$7 million, of which \$4 million owing to ourselves has been settled. The agreement entered into in June 2004 between the parties makes provision for the payment of a royalty by Resolute. At

a gold price of more than \$350 per ounce, we would receive a royalty on Syama's production of \$10 per ounce on the first million of ounces attributable to Resolute and \$5 per ounce on the next three million of attributable ounces

13

Table of Contents

entered. This royalty payment is capped at \$25 million. In April 2007, Resolute officially reopened the mine and announced that it would commence a recommissioning. We did not receive any royalties in respect of the years ended December 31, 2006, 2005 or 2004.

Effective on June 11, 2004, we undertook a split of our ordinary shares, which increased our issued share capital from 29,263,385 to 58,526,770 ordinary shares. In connection with this share split our ordinary shareholders of record on June 11, 2004 received two \$0.05 ordinary shares for every one \$0.10 ordinary share they held. Following the share split, each shareholder held the same percentage interest in us, however, the trading price of each share was adjusted to reflect the share split. ADS holders were affected the same way as shareholders and the ADS ratio remains one ADS to one ordinary share.

On November 1, 2005, we completed a public offering of 8,125,000 of our ordinary shares, including ADSs, resulting in gross proceeds to us of \$109.7 million. The new shares were allocated to institutional shareholders in the United Kingdom, the United States, Canada and the rest of the world. The proceeds from the offering are being used for the development of the underground project at Yalea, then will be used for the Tongon feasibility study and the underground project at Gara, together with such other organic and corporate opportunities, including possible acquisitions, as might arise.

Recent Developments

Following the decision to proceed with the development of the Loulo underground mines, at Yalea and Gara, the first hard rock blast at Yalea took place in December 2006. The first ore is expected to be accessed in late 2007 and full production is scheduled for 2009. Development of Gara, Loulo's second underground mine, is due to start in 2009. Most of the heavy vehicle fleet equipment has been delivered to site and a maintenance agreement entered into with the local Caterpillar dealership.

During 2006, as a result of peace initiatives in Côte d'Ivoire, we undertook a small drilling program in Côte d'Ivoire. The successful results have allowed us to plan and now commence a 30,000 meter feasibility drilling program designed to allow completion of a final feasibility study and for a production decision within two years.

Developments during 2006 relating to MDM are discussed more fully in "Item 4. Information on the Company — B. Business Overview — Legal Proceedings".

Principal Capital Expenditures

Capital expenditures incurred for the year ended December 31, 2006 totaled \$61.5 million compared to \$73.2 million for the year ended December 31, 2005 (excluding the Loulo power plant acquired under a finance lease) and \$68.5 million for the year ended December 31, 2004. As of December 31, 2006, our capital commitments amounted to \$10.5 million, principally for the Loulo underground project. The capital expenditures will be financed out of internal funds. The capital cost for both Loulo underground mines is expected to amount to \$106 million for the first four years of each mine.

B. BUSINESS OVERVIEW

Overview

We engage in gold mining, exploration and related activities. Our activities are focused on West and East Africa some of the most promising areas for gold discovery in the world. In Mali, we own 50% of Morila Limited, which in turn owns 80% of Morila SA, the owner of the Morila mine. In October 2005 the first gold was poured at our new Loulo mine, in which we have an 80% controlling interest through Somilo, and work has commenced on the development of two underground mines, Yalea and Gara. In addition, we have a feasibility stage project in the neighboring country of Côte

14

Table of Contents

d'Ivoire, as well as exploration permits covering additional areas in Mali, Côte d'Ivoire, Burkina Faso, Ghana and Senegal and exploration licenses in Tanzania. As of March 31, 2007, we had declared proven and probable reserves of approximately 6.29 million ounces attributable to our percentage ownership interest in our assets.

Our strategy is to achieve superior returns on equity through the discovery, management and exploitation of resource opportunities, focusing on gold. We seek to discover bulk tonnage gold deposits, either from our own phased exploration programs or the acquisition of early stage to mature exploration programs. We actively manage both our portfolio of exploration and development properties and our risk exposure to any particular geographical area.

The focus of Morila SA's exploration activities is on extending the existing orebody and discovering new deposits which can be processed using the Morila plant.

Outside of Morila SA, we hold exploration permits covering 3,000 square kilometers in the Morila region, where we are engaged in early stage exploration work.

The Loulo mine, in its first full year of production, produced 241,575 ounces of gold. Work on the underground development at the Yalea mine commenced and the first hard rock was blasted in December 2006. It is expected that the first ore will be accessed towards the end of the year and full production is scheduled for 2009. It is anticipated that Loulo's second underground mine, Gara, will start in the beginning of 2009 and first ore will be delivered to the plant at the end of that year.

The focus of exploration at Loulo is to continue to explore and discover additional mineralized material from the 372 square kilometer permit and to date success has lead to the identification of two additional targets, Faraba and Boboto, which are subject to further exploration.

We also own a feasibility-stage project at Tongon, located in Côte d'Ivoire. We have not yet committed to constructing a mine at Tongon. However, we have commenced a 30,000 meter drilling program which has been designed to allow completion of a final feasibility study and for a production decision within two years.

Ownership of Mines and Subsidiaries

The Morila mine is owned by a Malian company, Morila SA. The mine is controlled by a 50/50 joint venture management committee with day-to-day operations being the responsibility of a Malian subsidiary of AngloGold

Ashanti.

Under a joint venture agreement between us, we are each entitled to appoint four directors to the board of directors of Morila Limited, which owns 80% of Morila SA. AngloGold Ashanti is entitled to appoint one of its four directors as chairman, which position does not possess an additional vote. A quorum of the board for any meeting may only be achieved if at least two directors appointed by each of us are present. We have further agreed that all major decisions involving Morila Limited must be decided upon at the board level on a consensus basis, though under an operating agreement we have agreed to delegate responsibility for and authority regarding the day-to-day operation of Morila to a subsidiary of AngloGold Ashanti. Under the joint venture agreement, if either party wishes to sell its interest in Morila Limited, the other has a right of first refusal regarding that interest.

From the start of production in October 2000 through December 2006, Morila has produced approximately 4.3 million ounces of gold at a total cash cost of \$142 per ounce.

The Loulo mine is owned by a Malian company, Somilo, which in turn is owned 80% by Randgold Resources (Somilo) Limited, our wholly-owned subsidiary, and 20% by the State of Mali. Randgold Resources is the operator of the Loulo mine. In 2006, Loulo's production was 241,575 ounces at a total cash cost of \$328 per ounce.

Geology

We target profitable gold deposits that have the potential to host mineable gold reserves of two million ounces or more.

15

Table of Contents

West Africa is one of the more geologically prospective regions for gold deposits in the world. Lower Proterozoic rocks are known to contain significant gold occurrences and occur in West Africa in abundance. The Birrimian greenstone belts, part of the Lower Proterozoic, which are younger than the Archaean greenstones of Canada, Australia and South Africa, contain similar types of ore deposits and are located in Ghana, Côte d'Ivoire, Burkina Faso, Guinea, Mali, Senegal and Niger. Although a significant amount of geological information has been collected by government and quasi-government agencies in West Africa, the region has largely been under-explored by mining and exploration companies using modern day technology. Most of our exploration properties are situated within the Birrimian Formation, a series of Lower Proterozoic volcanic and sedimentary rocks. The West African Birrimian sequences host a number of world class gold deposits and producing gold mines.

Our strategy was initiated before the current entry of our competitors into West Africa and we believe that this enabled us to secure promising exploration permits in the countries of Côte d'Ivoire, Mali, Burkina Faso, and Senegal at relatively low entry costs.

Reserves

Only those reserves which qualify as proven and probable reserves for purposes of the Securities and Exchange Commission's industry guide number 7 are presented in this Annual Report. The reserves are calculated at an average gold price of \$475 per ounce (2005: \$425 per ounce) over the life of the mine or project.

Morila reserves have been estimated by our joint venture partner, AngloGold Ashanti. The Loulo mine and Project reserves were estimated by us in conjunction with our independent mining engineers.

Total reserves as of December 31, 2006, amounted to 75.85 million tonnes at an average grade of 3.66 g/t, giving 8.93 million ounces of gold of which 6.29 million ounces are attributable to us. In calculating proven and probable reserves, current industry standard estimation methods are used. The reserves were calculated using classical geostatistical techniques, following geological modeling of the borehole information. The sampling and assaying is done to internationally acceptable standards and routine quality control procedures are in place.

All reserves are based on feasibility level studies. Factors such as grade distribution of the orebody, planned production rates, forecast working costs and metallurgical factors as well as current forecast gold price are all used to determine a cut-off grade from which a life of mine plan is developed in order to optimize the profitability of the operation.

The following table summarizes our declared reserves as of December 31, 2006:

Operation/ Project	Proven Reserves			Probable Reserves			Total Reserves		
	Tonnes (Mt)	Grade (G/T)	Gold (Moz)	Tonnes (Mt)	Grade (G/T)	Gold (Moz)	Tonnes (Mt)	Grade (G/T)	Gold (Moz)
Morila mine	15.36	2.50	1.23	11.35	2.47	0.90	26.71	2.49	2.13
Loulo Project *	11.21	3.47	1.26	37.93	4.54	5.54	49.14	4.30	6.80

* Includes Loulo underground.

A 10% mining dilution at zero grade and a gold loss of 5% have been incorporated into the estimates of reserves and are reported as mill delivered tonnes and head grades. Metallurgical recovery factors have not been applied to the reserve figures. The approximate metallurgical recovery factors would be 91.5% for the Morila mine and 89.6% for the Loulo mine.

Mining Operations — Loulo

The Loulo Mine Project is situated in western Mali adjacent to the Falémé River — which forms the frontier with Senegal. It is located 350 kilometers west of Bamako and 220 kilometers south of Kayes. Loulo falls within the Birrimian sequence of the Kenieba inlier. This succession of volcano-sedimentary and clastic rocks contains several major regional shear structures hosting gold deposits such as Sadiola, Gara (formerly known as Loulo 0) and Yalea as well as numerous other satellite targets. Loulo is situated 96 kilometers from Sadiola.

Table of Contents

Following the 2003 updated feasibility study on the Loulo open pit project (which comprises the Gara and Yalea deposits) and the rise in the gold price, our board and that of Somilo approved the development of the Loulo open pit project. Construction commenced in February 2004. The mine produced its first gold in October 2005 and made its first gold sale on November 8, 2005, which marked the commencement of the five year tax holiday and three year duty free period granted to the mine under the Loulo establishment convention.

The President of Mali, Amadou Toumani Touré, officially opened the Loulo open pit mine on November 12, 2005 at an event attended by, among others, Malian government ministers, ministers from other West African countries, several thousand local villagers and their leadership, and our board.

Loulo Mine

The Gara orebody was first discovered on the lease by the Syndicat Or (a joint venture between the Bureau de Recherches Géologiques et Minières and Direction Nationale de la Géologie et des Mines) in 1981. In June 1992, BHP Minerals Mali Inc acquired the shares of Bureau de Recherches Géologiques et Minières (in Syndicat Or), and entered the Somilo joint venture together with the Malian government. BHP Minerals Mali Inc was subsequently acquired by us, in October 1996.

At that time, the total project gold mineralized material was estimated by BHP Minerals Mali Inc to be 1.25 million ounces. We then undertook detailed exploration which resulted in the discovery of the Yalea deposit. Following the acceptance of a bankable feasibility study in 1999, by the board of directors of Somilo, we exercised our option to increase our participation in the project to 51%. However, the project was put on hold with the subsequent drop in the gold price to nearly \$250 per ounce. In 2001, we also acquired the 29% La Source share in Somilo, raising our stake to 80%, with the government of Mali holding the remaining 20%.

As a result of a gold price recovery in 2003 and the completion of a successful exploration drilling campaign (which added significant confidence to our knowledge of the orebodies and highlighted the potential of significantly more reserve ounces at depth with respect to both Yalea and Gara), a revised feasibility study was conducted and demonstrated that the project met our investment return guidelines. Our board then approved the investment in Somilo, which facilitated the development of the Loulo mine.

On December 30, 2005, notice of default was given to the main construction contractor and our capital projects team took over completing the hard rock crushing and related phase II circuits, which had fallen behind schedule. Despite delays caused by the late commissioning of the hard rock crushing circuit, throughput in 2006 was maintained at levels above the design specification. This resulted in production of 241,575 ounces for the year, only marginally below expectations, mainly as a result of not being in a position to feed as much of the originally planned higher grade hard ore.

Loulo production has reached steady state and consequently the focus in 2007 will be on process optimization and improving cost control given the cost pressures impacting the industry, particularly with respect to grinding media, reagents and diesel for power generation.

Despite loading equipment difficulties, the mining contractor moved a total of 18.4 million tonnes at a strip ratio of 6.2:1 waste to ore. As part of an exercise to curtail the effect of rising contractor costs, all rise and fall formulae will be reviewed to take into account inflationary amounts and not contractor inefficiencies.

The Loulo mine has proved to be our second successful mine development. The focus is now on ensuring that the operation becomes one of Africa's more efficient gold mines and the underground development is carried out cost effectively and on time.

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

The following statistics detail the operating and production results from operations for the years ended December 31, 2006 and 2005:

Summary of Results	12 months ended December 31,	
	2006	2005
• Mining		
Tonnes mined (million tonnes)	18.36	12.10
Ore tonnes mined (million tonnes)	2.55	1.21
• Milling		
Total ore milled (million tonnes)	2.60	0.53
Tonnage rate (tonnes per hour)	337	304
Mill availability/utilization (%)	87.90	47.30
Head grade – reconciled (g/t)	3.15	4.46
Overall gold recovery (%)	93.94	94.30
Gravity (%)	5.79	6.08
Cyanidation (%)	88.15	89.78
Gold produced and shipped (oz)	241,575	67,984
• Total mine		
Total cash costs (\$/oz)*	328	165

*Refer to “Item 3. Key Information — A. Selected Financial Data” for a definition of total cash cost per ounce.

Mine Facilities

Loulo mine consists of two main open pits (Yalea and Gara) as well as other smaller satellite pits. The mine is currently developing the first of its underground sections at Yalea. The second underground mine will follow in two years’ time at Gara.

The plant is designed to process an average of 320 tonnes per hour, 2.5 million tonnes per annum using the following circuits: (1) crushing — a three-stage crushing circuit for the hard rock sulfide ores and a single stage roll toothed crusher for the soft weathered oxide ores, (2) milling — the milling circuit comprises two parallel single stage ball mills in closed circuit with a dedicated cluster of hydro-cyclones, (3) gravity — two XD 48 Knelson centrifugal primary concentrators followed by a shaking table for re-dressing of primary concentrates, (4) Carbon in Leach, or CIL, recovery process, (5) Zadra elution process and gold recovery.

Mineralized Material

Despite the mining depletion, total mineralized material increased by 1.42 million ounces to 11.35 million ounces at December 31, 2006.

During the year, a total of 2.5 million tonnes at 3.35g/t was mined from four pits: Yalea, Gara, P125 and P129. The softer oxide ore was initially fed to the plant, with hard ore being stockpiled while the hard rock crusher was completed. On commissioning the hard rock crusher the plant was fed with ex-pit and stockpile material.

At December 31, 2006, total material on stockpile (all of which is included in reserves) was 673,579 tonnes at 2.44g/t. Of this, 25,461 tonnes at 3.95g/t was on the plant cone, 45,431 tonnes at 3.59g/t on the Run of Mine, or ROM, pad and 602,687 tonnes at 2.29g/t on re-handle stockpiles behind the ROM pad.

Grade control versus plant check-out reconciliations were acceptable for most of the year, leading up to the hard rock crusher commissioning, when reconciliation was poor as a result of ore being fed from unplanned sources. Once the feed was stabilized during the last quarter of the year, reconciliations were back within 3% on tonnage and 2% on grade. Infill Reverse Circulation, or RC, drilling over P129 and Gara West has allowed us to improve our confidence in the mineralized material and transfer them into the reserve category with pit designs.

18

Table of Contents

Drilling concentrated on Gara Deeps during 2006, with definition drilling also continuing at Yalea. Incorporation of the Gara holes has allowed the extension of the mineralized material to 600 meters below surface. Infill drilling has allowed for the conversion of mineralized material to reserves with the completion of the latest underground mine design. Drilling at Faraba has allowed for additional mineralized material to be added, while total mineralized material has increased by 15% inclusive of mining depletion for the year. This takes the total mineralized material number over the 11 million ounce mark at December 31, 2006. Greenfields exploration continued on the remainder of the permit with drilling at the P64 target and Gara South showing promising results.

The Securities and Exchange Commission permits companies, in their filings with the Securities and Exchange Commission, to disclose only proven and probable ore reserves. We use certain terms in this section, such as ‘‘mineralized materials’’. Investors are cautioned not to assume that all or any parts of our mineralized materials will ever be converted into reserves which qualify as ‘proven and probable reserves’ for the purposes of the Securities and Exchange Commission’s Industry Guide number 7.

Ore Reserves

After mining depletion of 262,604 ounces, the overall reserve increased substantially from 5.6 million ounces at December 31, 2005 to 6.8 million ounces at December 31, 2006. Most of the increase has taken place at Gara, but a small increase also occurred at Yalea.

The Loulo mine is a dynamic environment and consequently the planning department continually updates the mine plans. Due to the number of deposits and targets, mine plans are developed individually for parts of the operation as new information becomes available. When significant changes have been made to any part of the project, the life of mine plan is updated.

2006 was the first year of continuous operations and the resulting costs, mining rates and plant throughput realized have been used in updating the mine plans and have had a consequent effect on those plans. Pit optimization was carried out at a gold price of \$475 per ounce with actual 2006 costs for mining, processing, general and administration applied.

2006 reserves reported are economic at a gold price of \$475 per ounce (2005: \$425 per ounce).

Dilution of 10% and ore loss of 5% are incorporated into the calculation of reserves.

Cut-off grade of 1.4g/t.

Stockpiled ore included.

The underground operation at Yalea, which had its inaugural blast on October 17, 2006, has seen significant reworking of the mine plans. The increased confidence in understanding the underground cost profile has had an effect on optimizing the open pit to underground interface leading to more ore being planned to be mined from underground. The deeper pit reserves in the south of Yalea attract a stripping ratio of approximately 13:1 indicating that it might be more efficient to exploit this ore from underground. These have consequently been separated from those shallower reserves pending completion of an underground mine design and plan, at which stage they might report to the underground reserve.

The 2006 mining operation at Yalea led to the depletion of 1.08 million tonnes at a grade of 3.15g/t for 105,808 ounces.

The open pit design at Gara has also been updated based on the latest mineralized material model and updated costs. An update to the open pit/underground interface is currently underway. The higher operating costs have been offset by the higher gold price indicating a similar size pit to that previously reported. During the year, 1.28 million tonnes at a grade of 3.47g/t for 139,043 ounces were mined from the Gara pit.

Table of Contents

During the year mining also took place in the two smaller pits, P125 and P129, where a combined total of 17,753 ounces was mined.

Underground reserves were increased during the year as a result of an increase in the mineralized material model due to extra drilling. This translated into an increase in underground reserves at Gara of approximately 720,000 ounces which was reported at the end of the fourth quarter of 2006. Subsequent to that a further refinement in the underground mine design has led to the reserve being increased to 13.14 million tonnes at a grade of 3.91g/t for 1.65 million ounces (2005: 5.14 million tonnes at a grade of 4.00g/t for 0.66 million ounces). While this has almost tripled the Gara reserve, early indications from drilling to the south of the current reserves is that additional high grade mineralization is present in this area. This could lead to a re-planning and scheduling of the Gara underground where mining is due to commence in 2009.

Mining

Mining operations at Loulo are carried out under contract by a third party contractor which operates a fleet of two Liebherr 994B excavators and 14 Caterpillar 777D dump trucks, assisted by a variety of ancillary equipment. Apart from mining the main Gara and Yalea pits, this year also saw the mining of two satellite pits, P129 and P125. That third party contractor also provides the drill and blast services with bulk explosive products and accessories being supplied by another third party contractor.

The average production volume for the mining fleet during 2006 was 700,000 bcm per month, which was ramped up to 800 kbcm per month towards the end of the year.

	Mining Results	
	2006	2005
• Ore tonnes mined (million tonnes)	2.55	1.21
• Ore grade (g/t)	3.35	4.50
• Waste mined (million tonnes)	15.82	10.89
• Stripping ratio	6.2:1	10:1
• Total tonnes mined (million tonnes)	18.36	12.10

Ore Processing

Production

The year was commenced by achieving milled production rates of 370 to 395 tonnes per hour, which are higher than the 300 tonnes per hour target originally planned. Soft ore from upper levels, predominantly from Yalea, made this feasible. Tonnage throughput ramped up and peaked at 257,377 tonnes in March 2006 and thereafter gradually decreased to an annual low of 180,311 tonnes in June 2006. Several factors contributed to this decrease in monthly tonnage throughput, with the main issues being the increased throughput of Yalea transitional ore, the introduction of harder Gara pit ore and the commissioning of the hard rock crusher. The last quarter saw monthly tonnage throughput rates back to 220,000 tonnes per month as planned, as the total process plant achieved steady state.

A total of 2.6 million tonnes was milled during the year with a head grade of 3.15g/t. An overall year to date gold recovery of 93.9% was achieved resulting in 241,575 gold ounces produced and shipped. Gold recoveries have generally been affected by the mineralogy of the ore. Deeper transitional and fresh ore from the Yalea pit have resulted in lower recoveries in the range of 89.5% to 92.5% (as per plan), whereas the treatment of Gara pit oxide ore resulted in significantly higher than expected gold recoveries of 97.0% plus. The mill availability varied through the year but averaged 91% during the final quarter as steady state conditions were attained.

Tailing storage facility

Somilo recognizes the importance of sound tailings disposal practices for safety and environmental reasons. It has formed partnerships with a tailings disposal specialist and a mine

21

Table of Contents

residue and environmental engineering consultant to develop the Tailings Storage Facility, or TSF, at Loulo. The main starter wall is being mechanically raised to the 147 meter level and thereafter cycloning will commence to raise the TSF walls.

Underground

Mine design

During the course of the year further progress was made re-assessing the designs for both the Yalea and the Gara mines.

Yalea underground mine

While the original feasibility study on the mining of the Yalea deposit from underground envisaged a single truck decline, a re-design with increased production via a twin decline system incorporating the use of conveyor belts to transport ore to surface was adopted at the end of 2005. The main reason for the change was the increase in the mineralized material and reserve base which allows for higher production levels. Additional benefits relate to safety and access aspects of mining. This design also has the advantage of accessing the higher grade payshoot earlier in the schedule allowing a much faster buildup in forecast gold production.

During 2006, the design was refined further, while the life of mine remains almost the same. Total ore reserves for the Yalea underground amounted to 3.63 million ounces at December 31, 2006 and the production rate has been increased to 80,000 tonnes per month from 50,000 tonnes per month with the possibility of even higher rates yet to be examined.

Gara underground mine

During the third quarter of the year, a deep underground drilling program was completed at the Gara deposit demonstrating considerable extensions to the orebody. Based on these drill results, a mine re-design was completed and scheduled. Total underground ore reserves for Gara at December 31, 2006 amounted to 1.38 million ounces, an increase of 720,000 ounces over the previous reserve. The production rate has been increased to 100,000 tonnes per month (previously 60,000 tonnes per month). Subsequent to this, based on drill results from the fourth quarter 2006, additional design has increased the reserve to 1.65 million ounces.

The main features of the design for Gara are as follows:

- The design has been based on the Yalea design with the exception that the two declines will both be developed from the open pit instead of a boxcut.
- The twin declines will form part of a twin ramp system, one towards the north and the other towards the south, dividing the underground mine in two separate mining and ventilation districts.
- A conveyor belt system will be used to transport ore and waste out of the mine rather than the conventional truck transport.
- Waste passes will be developed from inside the pit to facilitate backfill.
- The reverse Avoca mining method is planned to reduce ore lock up in pillars.

Comparison of the forecast gold production by the conveyor option over the trucking option shows a much faster build-up of production as well as a higher level of production, improved safety and ventilation conditions.

Currently the Gara decline is planned to start in 2009 with full production being achieved in 2014.

22

Table of Contents

The following table lists the salient features of the underground mine designs:

Design Features	Gara	Yalea
• Life of Mine	13 years	18 years
• Ore reserve	1.38 Mozs	3.21 Mozs
• Production rate	100,000 tpm	80,000 tpm
• Capital expenditure first four years	\$45m	\$61m
• Ongoing capital expenditure (development, fleet and infrastructure) per year	\$5.5m	\$3.8m
• Average total cash cost per ounce	\$277/oz	\$199/oz

Operational progress

The excavation work of the Yalea boxcut, carried out by third party contractors, made good progress. Bedrock was exposed during November 2006 and the final soft excavation work was completed in December 2006 with approximately 60,000 cubic meter having been removed. The first blast into solid rock was taken in December 2006.

The delivery of the underground heavy vehicle fleet is almost completed.

Construction of the mine offices, workshops and other site infrastructure including electrical supply was completed by the end of the first quarter of 2007.

Environment and Community Development

Monthly monitoring programs continued through the year, incorporating dust fallout levels as well as physiochemical, cyanide, oil, grease and bacteriological levels of surface and ground water points covering the site and the main water

courses surrounding the mine. Bi-annual audits were completed by independent environmental consultants, as well as by a National Environmental Delegation from the government to verify results and audit environmental management procedures. With the completion of the main capital construction, rehabilitation programs were initiated which included the landscaping and re-vegetation of borrow pit and construction sites with vegetation germinated in the mine nursery.

The waste recycling system continued with mine waste being separated into steel, wood, glass, plastic, aluminium, organic and other waste. Glass, plastic, aluminium, wood and steel is sold off to local contractors and the funds channeled back to the community development budget.

International Standard Organization (ISO14001) training was initiated and it is our intention to move towards compliance with this code. Revised closure and environmental management systems are being designed incorporating life of mine changes as a result of the underground projects.

Community liaison meetings were held monthly between the mine and village representatives to address issues raised by both parties. We are committed to address basic health, education and access to potable water and will support initiatives to create employment and income for the community. In this light four new boreholes were drilled in the surrounding villages and local artisans were trained in the repair of the pumps; a malaria spraying program was expanded to include the villages of Loulo and Djidian-Kenieba, resulting in a 55% reduction in malaria cases treated compared to 2005; HIV awareness campaigns were supported in conjunction with NGOs; a foot bridge was built across the Gara River to allow farmers to access land adjacent to the new permanent water supply of the Gara Dam; a beekeeping test farm was initiated; school furniture was donated to the local schools; and the Bolibanta Women's market gardens were supported with donations of seed.

The construction of a new school at Loulo and a Mayoral Office at Sitakily were other projects initiated during the year.

Construction Report

Having taken the construction project back from the primary contractor, MDM, in December 2005, the balance of the work has been completed by our in-house project team. The overall process facility is performing well with tonnage throughput averaging above the design capacity for the year.

23

Table of Contents

The hard ore crushing facility, comprising three stages of crushing, was built during the first half of 2006 and commissioned in June. Crushing operations have progressed well and the plant is now exceeding its original specified duty. Construction of the 40,000 tonne (live) crushed ore stockpile has recently been completed and commissioned.

Construction of the first of Loulo's underground sections, the Yalea decline, commenced in July 2006 with the excavation of the boxcut, with access to the twin portals. The boxcut excavation has been completed and work on the decline tunnels is in progress. The underground construction contract was awarded to a third party contractor.

The remaining work to complete the fuel farms at the plant site and at the mining area was carried out during 2006 and these facilities are now fully operational.

The raw water pumping station, at the Falémé River, is now fully operational. Construction of the Gara storage dam pump station is complete and commissioned.

The CIL expansion project (an additional 4 CIL tanks) is nearing completion, with commissioning scheduled for the second quarter of 2007. This plant expansion will increase circuit residence time, improving recoveries, but will later facilitate a future expansion in plant throughput.

The first phase of the cyanide destruction system is in construction with the introduction of a tailings thickener and return water tank to the circuit. This will reduce the quantity of cyanide in the tailings stream. Wash water will be returned to the process water circuit. This is scheduled for commissioning in the third quarter of 2007. The circuit is being constructed as an add-on in parallel with the existing circuit. The tie-in to the existing circuit will be completed during normal maintenance downtime. The circuit may be bypassed, which will ensure no disruption to the existing process. A further cyanide destruction phase is scheduled for commissioning in early 2008.

The power station is being expanded by a further 7 megawatts. This additional power will cover the needs of the underground development at Yalea. Two medium speed diesel generators will be installed to meet this demand. The new facility is being engineered to house four units and depending on future demand a further two units may be acquired later. It is anticipated that the medium speed engines will supply base load and the remaining high speed units would supply the additional power up to the demand. The medium speed machines are slightly cheaper to operate on diesel and they are capable of conversion to run on heavy fuel oil, which will allow Somilo to reduce its processing cost. Construction has commenced on the concrete bases for the engines. The first engine is expected to be operational in the third quarter of 2007 and the second unit will be commissioned in the first quarter of 2008.

Human Resources

Manpower

Overall manpower levels, including contractors, at Loulo increased during 2006 as the project progressed and mining and processing commenced.

	Manpower	December	
		2006	2005
• Mine labor		327	519
• Capital projects		375	499
• Mine contractors		643	184
• TOTAL		1,345	1,202

Training

Three team effectiveness workshops were held at Loulo during 2006.

A managerial and supervisory skills course was held at Loulo in July 2006 and attended by managers and supervisors. Our employees, including 14 from local villages, successfully completed a

crusher operator course at Morila mine. Structured engineering maintenance and metallurgical on-the-job action learning training was ongoing at the processing plant throughout the year. This training has enabled those employees recruited from the local villages to successfully transfer to their jobs the information and skills learned at the initial job training program they attended at Morila in 2005.

All Somilo and contractor employees recruited during the year were required to attend the mine's induction and safety training course, before commencing work. In addition, all production employees attend workplace toolbox safety talks at the start of each shift. A series of first aid and safety courses were attended by engineering and metallurgical employees during the year. Senior managers attended an International Standard Organization (ISO14001) executive briefing and line managers, environmental and safety staff attended the ISO14001 audit course during the last quarter of 2006.

Industrial relations

Industrial relations remained positive throughout the year. Following the successful union election at the start of the year and the subsequent establishment of union structures at Loulo in February 2006, regular monthly meetings were instituted between the union and management. Agreement was reached with the union in November 2006 regarding the mine's rules and regulations. These were implemented in December 2006 following authorization from the Regional Labor Inspectorate.

In addition, an innovative transport allowance plan tied to a hire purchase arrangement between Somilo and its employees, was successfully negotiated with the union. The plan consists of motor cycles being purchased by Somilo on behalf of employees who repay Somilo using their monthly transport allowance. The plan overcomes a total lack of public transport in this remote area, supporting sustainable development objectives and creating job opportunities outside of the mine.

Somilo, together with other large mining companies in Mali, is represented at the talks concerning a proposed new National Mining Industry Collective Agreement taking place between mining industry employers, SYNACOM (Mining Union Confederation), the Directorate of Labor and the National Employers' Association. Two meetings were held during 2006 and further meetings are scheduled in 2007.

Community development

Relations with the community remained positive throughout the year and community liaison committee meetings were held monthly. The focus areas of the committee remain on employment of local villagers by the mine and the three pillars of the mine's social program, which are basic education, food security and basic health (which includes potable water provision).

During the year, the following community development activities were undertaken:

- Employment of local villagers — Learning ability and other psychometric testing was carried out in all the villages surrounding the mine to select young people to work on the newly installed crushing circuit. Fourteen of the twenty successful applicants were from the local villages. In addition, Loulo and its contractors continued throughout the year to apply a selection process that gives precedence to local villagers over other job seekers, with a view to maximizing the employment of people from the villages most affected by the mine.
- Education — The opening of the new school built by the mine in Djidian-Kenieba and the building of a new primary school at Loulo (70% completed at December 2006). Schools at Sakola and Baboto were repaired and refurbished and teaching resources and aids provided to all schools in the local area. Furthermore under the supervision of the Malian Department of Education there was the subvention of teaching staff at Sakola village school as the mine funded

one teacher for each teacher funded by the community. School furniture and learning resources and equipment were donated by the mine to village primary schools.

25

Table of Contents

- Food security — The establishment of vegetable gardens, the setting up of crop production training programs and the provision of seeds and fertilizer to farmers in local villages surrounding the mine. The mine's agricultural education program for local farmers established a model beekeeping enterprise. The test apiary aims to educate people about beekeeping and encourage them to take up beekeeping in the area.
- Basic health — The mine's medical officer treated and provided medicines to 9,600 patients from the local community. The mine evacuated several seriously ill villagers to hospitals in Bamako and Kayes.
- Malaria control and HIV/AIDS awareness — Educational and awareness campaigns were undertaken, with assistance from NGOs, to sensitize people in the local villages about malaria and HIV/AIDS, how to avoid contracting the diseases and the necessity of testing and treatment. Malaria control programs were introduced in line with the recommendations from malaria vector surveys carried out in 2005 and 2006 by Prof. Richard Hunt of the School of Animal, Plant & Environmental Sciences, University of the Witwatersrand, South Africa. Repeat spraying of the dwellings in local villages was undertaken prior to the start of the rainy season. In addition, mosquito nets were distributed to households in Djidian-Kenieba and Kenieba.
- Water provision — The mine installed a further two Indian pumps in the Loulo and Djidian-Kenieba villages. In addition, all defective Indian pumps were overhauled using mine supplied spares and a new access road was prepared so that the cattle from Loulo village could be watered at the Falémé River. The aim of the water provision project is to ensure a continuous and reliable supply of potable water to all the local villages.
- Local government support — The mine, with agreement from the community development committee, financed the construction of an office for the Mayor of the Commune at Sitikily village.

Total expenditure by the Loulo mine on community development projects for the year 2006 was \$175,196 which amount does not reflect the costs of providing medical treatment, medical evacuations, medicines, vaccinations, creating disease awareness and education training.

Mining Operations — Morila

Operations and Projects

Our major gold producing asset since October 2000 has been the Morila gold mine. Morila, which was discovered by us in 1996, is now owned by a Malian company, Morila SA, which in turn is owned 80% by Morila Limited and 20% by the State of Mali. Morila Limited is jointly owned by ourselves and AngloGold Ashanti.

Morila Mine

The mine is controlled by a 50:50 joint venture management committee with day to day operations being the responsibility of AngloGold Services Mali SA, or Anser, a Malian subsidiary of AngloGold Ashanti Limited, under an operating agreement.

From the start of production in October 2000 through December 2006, Morila has produced approximately 4.3 million ounces of gold, and Morila SA has paid total dividends to its shareholders of \$505 million. As forecasted, Morila produced in excess of 500,000 ounces for the year, finally totaling 516,667 ounces of gold for the year, down from 2005's production as a result of lower grades from the pit.

The year started well with both the mining and plant operating at design capacity. However, towards the middle of the year, plant production dropped and in the third quarter plant throughput was not reaching the expanded plant design capacity. Together with our partners, we addressed the various issues with the goal of achieving consistent sustainable production. The increased attention had the desired effect and in the last quarter the mine exceeded expanded design capacity in each of the three months.

26

Table of Contents

Mining performance suffered particularly in the second half of the year but steps are being taken to catch up the backlog.

Costs were reasonably well contained given prevailing increases in input costs. Total cash costs, before adjustment for one-off costs relating to provisions and indirect taxes, were \$258 per ounce, up from last year's costs of \$210 per ounce.

The following statistics detail the operating and production results from operations for the years ending December 31, 2006, 2005 and 2004:

Summary of Results	12 months ended December 31,		
	2006	2005	2004
• Total mined tonnes (million tonnes)	21.5	24.6	26.6
• Ore tonnes mined (million tonnes)	5.2	7.0	5.3
• Mined grade (g/t)	3.2	4.3	4.3
• Ore tonnes milled (million tonnes)	4.1	3.8	3.5
• Head grade (g/t)	4.2	5.9	5.2
• Recovery (%)	91.9	91.7	87.9
• Ounces produced (oz)	516,667	651,110	510,485
• Total cash cost (\$/oz)*	258	210~	184
Attributable (40% proportionately consolidated)			
• Ounces produced (oz)	20,667	260,444	204,194
• Net profit (\$ million)	39.6	56.3	25.2

*Refer to 'Item 3. Key Information — A. Selected Financial Data' for a definition of total cash cost per ounce.

~Restated due to change in accounting policy related to stripping costs. Refer to note 6 of our audited consolidated financial statements.

Mineralized Material

The mineralized material base estimated for the mine using the results from infill drilling programs as well as resource extension drilling, depleted to December 31, 2006, was 2.85 million ounces.

Ore Reserves

The ore reserve estimate for Morila, depleted for mining to December 31, 2006 and based on the current orebody model, was 2.13 million ounces (including stockpiled ore).

It is currently estimated that mining activities will cease during 2009 with the processing of stockpiles continuing until 2013.

Remaining reserves are slightly lower than last year after depletion has been taken into account as a result of changes in the orebody model. However due to the increased gold price more of the marginal stockpile material can now be treated economically so ore reserves have been partially replaced, albeit at lower grade.

Mining

Mining operations are carried out under contract by Somadex, which is a subsidiary of DTP Terrassement, the mining arm of the French construction company, Bouygues. A partnership agreement which incorporates the principle of sharing the potential savings achieved by the contractor using agreed productivity assumptions and allowing for an agreed return is in effect.

While Somadex were able to maintain production in the early part of the year by the mid-year a lack of experienced maintenance personnel led to increasing breakdowns of the mobile plant. As a result, mining production dropped below budget. Action was taken by the partnership to restore productivity and the situation had started to improve by year end. Somadex have also committed to

27

Table of Contents

bringing extra mining fleet to site at their own risk in order to maintain the desired levels of production.

	Grade (Mt)	Grade (Mt)	Gold (g/t)	Gold (g/t)	(Moz)	(Moz)	Attributable (40%) (Moz)
Ore Reserves	2006	2005	2006	2005	2006	2005	
• Proven	15.36	15.95	2.50	3.21	1.23	1.65	
• Probable	11.35	6.19	2.47	3.63	0.90	0.72	
• Sub-total							
Proven and Probable	26.71	22.14	2.49	3.33	2.13	2.37	0.86

2006 reserves reported are economic at a gold price of \$475/oz (2005: \$425/oz).

Dilution of 10% and ore loss of 5% are incorporated into the calculation of reserves.

Cut-off grade of 1.4g/t.

Stockpiled ore included.

Ore Processing

The year started well with regards to plant throughput, but in the second and third quarters operational problems lead to lower than budgeted throughput. A review team comprising ourselves, Loulo mine and AngloGold Ashanti

personnel worked on site with Morila employees to identify the underlying causes and institute corrective action. By the fourth quarter, corrective action had yielded the desired effect and throughput was again exceeding the design capacity of the expanded plant. In October 2006 a record 372,463 tonnes was processed.

Exploration

Morila focused its exploration activities on extending the existing orebody and discovering new deposits for processing using the Morila plant. Drilling has concentrated on extensions to the known orebody, chiefly in the south (Tonalite extension) and in the west (Morila Shear Zone west extension) as well as in the eastern margin.

Drilling at the Samacline target, approximately 500 meters to the west of the pit and approximately 400 meters below surface has also continued during the year. Further close spaced intersections have been effected through deflections from several drill holes in order to assess short scale variability. On completion of the current drilling program, a scoping study designed to test amenability of the deposit to a small underground mining operation will be assessed.

The 40,000 meter regional exploration program of the 200 square kilometers mine lease area is now almost complete. Comprising tactical and strategic targets, the program is guided by a recently completed structural analysis that has emphasized the unique and discordant architecture of the Morila structural domain.

Results from the regional program have continued to define an anomalous footprint around the deposit, although we are unable to predict that we will discover another Morila-styled deposit. During the year structural and metallogenic consultants have been contracted to assist with the generation of a genetic model by integrating the geological, structural and mineralogical components of the deposit.

Environmental

During the year, implementation of the International Standard Organization (ISO14001) program commenced at Morila. An on-site conformity assessment of the implementation of the mine's environmental management system was carried out in November 2006 and Morila achieved a compliance rating score of 94% with no major non-conformances.

28

Table of Contents

Human Resources

Manpower

Manning levels related to permanent and temporary Morila and contractor employees on the mine were as follows:

	Manpower	December	
		2006	2005
• Morila employees			
National permanent		468	456
Temporary		63	—

Expatriate	40	33
Sub-total	571	489
• Contractor employees		
National permanent	972	995
Expatriate	44	40
Sub-total	1,016	1,035
• TOTAL	1,587	1,524
Training and development		

During the year, employees attended safety induction training, cyanide awareness training and First Aid courses. Employees consisting of management, safety representatives and trainers, attended a safety hazard identification course. The mine's training centre also provided training for Loulo, Siguiri, Yatela and Sadiola trainees during 2006.

Industrial relations

The industrial relations climate during 2006 was satisfactory and no industrial action took place. The Morila Mine Level Agreement, concluded in October 2005 between management and the Morila union, was implemented in January 2006 following its approval by the Directorate of Labor and the Labor Court. The contractors on site also experienced healthy industrial relations throughout the year. The training of union representatives carried out by an independent consultant during the year has contributed to the constructive industrial relations climate at Morila.

Community Development

A partnership entered into with US AID and the local authority of the commune of Sanso became increasingly effective during 2006. The partnership has increased the money available for community development projects from \$150,000 to \$275,000 per year for each of the next three years. Rice projects at Fingola and Morila were financed and set up by the mine and run by the women of the two villages.

Total expenditure by the Morila mine on community development projects for the year 2006 was \$164,287.

Table of Contents

Development Project — Tongon

Operations and Projects

The Tongon project is located in northern Côte d'Ivoire, 628 kilometers north of Abidjan within the 671 square kilometer Nielle permit. The total mineralized material base exceeds 3 million ounces.

Tongon Project

A prefeasibility Type 2 study was completed in June 2002 which demonstrated that the Tongon project could meet our criteria for investment and a Type 3 feasibility study was initiated. After an initial 16 drill hole program, further drilling and on-site feasibility study work was put on hold due to the political conflict in the Côte d'Ivoire.

In 2005 all aspects of the Tongon project were reviewed and the financial parameters used in the June 2002 prefeasibility study were updated to reflect December 2005 market conditions, as follows:

Updated Parameters

- Potentially mineable material of 13.05 million tonnes at a grade of 3.54 g/t for only the southern zone, assuming dilution of 15% and ore loss of 2%.
- Strip ratio of 4.38:1 and cost of \$1.51 per tonne mined over the life of mine.
- Recoveries of 97.4% for oxides and 82.1% for sulfides.
- Production rates of 240,000 tonnes per month in oxides and 200,000 tonnes per month in sulfides.
- Life of mine unit cost of approximately \$22 per tonne milled and \$260 per ounce cash cost.
- Total life of mine capital costs of \$111 million.
- Gold price of \$400 per ounce flat.
- Côte d'Ivoire royalty of 3% on gold sales.
- Five year tax holiday.

On the basis of this updated economic assessment and even taking into account the recent inflation pressures in the industry, the project continues to meet our hurdle rates for further investment.

The project had been stalled at the feasibility stage for the past couple of years while the country has been dealing with political instability and conflict, but with the relative calm that has returned, the team has recommenced its work program. Presidential elections scheduled for October 2006 have been postponed due to a delay in preparation until October 2007, after an agreement was reached among the rival parties. Officials of both the government ministries and the opposition have shown commitment to making the project work.

During 2006, an eight-hole 1,992 meter tactical diamond drilling program was carried out and the results were used to plan a 30,000 meter feasibility drilling program scheduled for the first half of 2007. The drilling program was designed to allow the completion of a final feasibility study and for a production decision within two years of full commencement of drilling activities.

The next phase of drilling will help us understand the relatively complex geology of the southern zone, as well as add additional mineralized material to the northern zone. The completion of a successful final feasibility study would allow a production decision and financing arrangements to be made.

Subject to a positive outcome of the bankable feasibility and the current political process, we believe development of the Tongon deposit is likely as the Côte d'Ivoire has favorable infrastructure to support a mining venture. Power, water and road access are available close to the site. The Tongon project would also allow us to maintain and expand our production profile, as the Loulo mine grows and production at our Morila mine tails off.

Table of Contents

Annual reserve declaration at 31 December 2006

	Tonnes		Grade		Gold		Attributable (40% Morila, 80% Loulo)
	(Mt)	(Mt)	(g/t)	(g/t)	(Moz)	(Moz)	(Moz)
Proven and Probable Ore Reserve	2006	2005	2006	2005	2006	2005	
Morila							
Proven	15.36	15.95	2.50	3.21	1.23	1.65	
Probable	11.35	6.19	2.47	3.63	0.90	0.72

Total Reserves							
Proven and Probable	75.85	60.71	3.66	4.08	8.93	7.95	6.29

The reporting of Ore Reserves is in accordance with the Securities and Exchange Commission's industry guide number 7.

2006 reserves reported are economic at a gold price of \$475/oz (2005: \$425/oz).

Dilution of 10% and ore loss of 5% are incorporated into the calculation of reserves.

Cut-off grade of 1.4g/t.

Stockpiled ore included.

Exploration Projects

Exploration Highlights

In 2006, exploration activities concentrated on the extension of known orebodies and the discovery of new orebodies both at producing mines and exploration sites. In addition, we continued with our expansion of the African Footprint strategy within the most prospective gold belts of both West and East Africa and have operations in six African countries boasting a portfolio of 128 targets on 18,526 square kilometers of ground holding.

- At Loulo, we continue to build our mineralized material base, which is now over 11 million ounces. As well as the conversion work, exploration is focused on the next discovery by systematically evaluating a portfolio of targets within the lease area. Of these, Faraba and Baboto are showing the most promise.
- At Morila, the next discovery continues to evade detection even though 40,000 meters of regional drilling has been completed. However, the low grade halo, which surrounds the ore body, continues to be defined. Research points towards an intrusive related ore genesis for the

deposit.

- In south Mali, a regional gravity survey is being undertaken to aid the identification of targets for drilling in 2007.
- In Senegal, a 10,000 meter RAB drilling program has commenced to evaluate 12 targets. This will help in prioritizing additional targets at Delya, Bambaraya and Sofia for diamond drilling later in the year.
- In Burkina Faso, drilling has defined a broad, low grade mineralized system over a three kilometer strike at Kiaka. Elsewhere in our portfolio of permits, regional programs are identifying targets for follow-up work in the coming year.
- In Ghana, exploration activities recommenced on a portfolio of four permits. First pass regional exploration programs have been completed; positive results have been returned from one of these, Bole, which will see follow-up programs in 2007.
- In Tanzania, generative work is the driver to build a new portfolio of projects after Kiabakari did not meet our criteria for further investment.

32

Table of Contents

- In the Côte d'Ivoire, exploration activities successfully recommenced with a tactical diamond drilling program at the Tongon prospect, situated within the Nielle permit, in the north of the country. An approximate 30,000 meter feasibility diamond drilling program commenced in April 2007.
- A generative team has been established to re-assess the African countries where we are not currently operational, to identify potential value adding projects that would be of interest.

In summary, we have a quality portfolio of exploration projects in both West and East Africa. This reflects our business strategy of organic growth through exploration and its primary objective to build sustainable mining projects with significant returns. This strategy is attested to by our discovery and development track record, which includes the Morila and Loulo mines, both in Mali, and the Tongon project, currently at the feasibility stage in the Côte d'Ivoire.

Mali

Loulo

In addition to the conversion work and the deep drilling at both the Yalea and Gara orebodies, exploration has concentrated on the next discovery by evaluating a quality portfolio of targets within the 372 square kilometer permit area.

At the Gara deposit, new information from the continual excavation of the deposit and re-logging and re-interpretation of diamond drill core established that high grade mineralization is associated with the 0300/0400 trending axial planes of quartz tourmaline folds and is concentrated in the hinge zone of a large overturned antiform.

Six diamond drill holes for a total of 3,809 meters have confirmed the geological model and intersected strong quartz tourmaline alteration and mineralization up to 500 meters south of the existing wireframe; LOCP117: 5.80 meters at 3.18g/t from 333 meters and LOCP118: 4.76 meters at 0.64g/t from 409 meters and 6.15 meters at 1.39g/t (including 1.20 meters at 3.70g/t) from 459 meters; LOCP120: 5.80 meters at 9.16g/t (including 2.90 meters at 16.66g/t) from 757.4 meters; LOCP124: 7 meters at 17.95g/t from 551.75 meters (including 1.80 meters at 59.36g/t). LOCP126: 9.20 meters at 1.02g/t from 578.60 meters and 6.40 meters at 10.37g/t from 591.80 meters; LOCP125: 6.15 meters at 11.22g/t from 820.35 meters. Follow-up diamond drilling will further evaluate the potential of this target down

plunge.

The Baboto structure is part of a more than 5 kilometer mineralized structure which hosts the known targets of Baboto South, Central and North. At Baboto South a 23 hole, 2,368 meter RC drilling program was completed over a strike length of 1.3 kilometers. The results returned a continuous zone of mineralization over the entire strike length with an average width of 15.63 meters and grade of 1.82g/t to vertical depths of 95 meters.

Gold mineralization is associated with both massive and disseminated pyrite and is hosted mainly in silica-carbonate altered sandstones between hangingwall and footwall shears.

At Faraba, 48 RC holes for 5,573 meters and eight diamond holes for 2,248 meters have been completed during the year testing a three kilometer strike length of an overall ten kilometer anomalous corridor. The drilling has currently identified two pods of gold mineralization; the north zone and the main zone. These two zones are connected by zones of narrow alteration and mineralization which have been dissected and offset by complex faulting and are not fully understood at this stage. The north zone has a strike length of 600 meters, an average width of 12 meters, an average grade of 2.20g/t and has been tested to vertical depths of 230 meters.

The main zone is a 100 meter wide anomalous structure which currently measures 400 meters in length and has been tested to a vertical depth of 180 meters. At its core is a 350 meter long mineralized zone with an average intersection width of 43 meters and an average grade of 2.60g/t.

This zone contains a high grade unit whose width and grade averages 5.50 meters at 8.70g/t over the 350 meter strike length. Drilling within this zone has confirmed the presence of extensive silica-carbonate alteration within coarse sediments and grits.

33

Table of Contents

Trenching and drilling programs will be completed to test the 10 kilometer regional Faraba target, where 14 additional dilation zones have been mapped, as well as to further define the north and main zones of mineralization during 2007.

At P64, a 1.5 kilometer >100 ppb north-northwest soil anomaly characterizes the target. To date only 300 meters of strike has been drill tested with seven RC holes for 1,097 meters and five diamond core holes for 1 396 meters. The results delineate a 200 meter strike of mineralization which includes: P64RC03: 7 meters at 1.47g/t and 4 meters at 1.03g/t, P64RC04: 29 meters at 1.03g/t, P64RC07: 5 meters at 2.31g/t, P64DH01: 28 meters at 1.72g/t, 16.2 meters at 4.41g/t and 11.80 meters at 1.44g/t and P64DH02: 5.80 meters at 3.43g/t and 8.20 meters at 6.51g/t. Mineralization is associated with chlorite and magnetite rich sediments plus localized bands of quartz tourmaline and is bounded by a hanging wall and footwall shear which trend north-south and dip sub-vertically.

To increase our knowledge and understanding of the Loulo mineralized district, a three year PhD research thesis is being undertaken in conjunction with Kingston University, London, England.

Selou

The Selou area consists of three permits directly south of the Loulo exploitation lease and work to date has identified two main targets, namely Sinsinko and Boulandissou.

The Sinsinko target is underlain by a 1.75 kilometer north-south trending >30 ppb gold soil anomaly; follow-up trench and RAB drilling have confirmed a bedrock source to mineralization. One diamond hole SND001 drilled below trench BET05: 76 meters at 0.83g/t returned 5.70 meters at 1.71g/t, 4 meters at 3.11g/t, 1.80 meters at 2.77g/t and 4.20 meters at 7.10g/t, all within a 21 meter mineralized envelope. The mineralization is associated with tourmaline-sericite-carbonate-haematite-silica alteration of a greywacke host. Further drilling is planned in 2007.

Boulandissou is an 8 kilometer anomalous shear corridor. A reconnaissance diamond hole BND01 drilled beneath trench BNT02: 28 meters at 3.31g/t returned 6.60 meters at 1.28g/t.

Mineralization with anomalous gold values in the diamond drill core is hosted by altered quartzite and associated with weak disseminated pyrite and arsenopyrite. The alteration patterns are dominated by brecciation in association with silica, tourmaline and weak sericite. Additional trenching and drilling will be completed during 2007 to further evaluate this target.

Morila Exploitation Lease

Exploration strategy at Morila was designed primarily to provide a comprehensive evaluation of the resource potential in the greater lease area. The flat lying nature of Morila style deposits, especially if they are “blind or buried”, precludes the use of conventional geochemical and/or geophysical procedures for target generation. Accordingly, given our current level of knowledge the only known viable targeting tool is the use of regularly spaced deep diamond drill holes to blanket the area. To date a total of 89 holes for 44,045 meters have been drilled, to an average depth of 500 meters. The results, although failing to identify a new deposit, have intersected a low grade (plus 0.10g/t) footprint to the deposit. This footprint will be used as a vector for follow-up drilling to target higher grade mineralization.

A post doctoral research project has been set up through the Geology Department of the Australian National University and the Research School of Earth Sciences. The aim of this study is to understand the relationship of gold mineralization to high grade metamorphism and partial melting of the surrounding sediments. Preliminary results indicate an ore genesis related to the contact thermal aureole of an igneous intrusive.

Morila Region and Southern Mali

In the Morila region, we have been exploring on our permits, immediately adjacent to Morila mine, for several years. The techniques used to date have been successful in locating mineralized structures such as Ntiola and Kona. However, so far no economic mineralization resembling the

34

Table of Contents

Morila deposit has been located outside the mine-lease. Despite the lack of success in the area, we will continue exploring until all reasonable avenues of research have been investigated. An indication of this commitment is a 3,000 meter diamond drilling program which was completed before the annual wet season in June 2006.

As few gold targets at surface remain untested and rock outcrop only accounts for 0.5% of the surface regolith, this program was designed to provide geologists with geological and structural information to assist with interpretation in this most difficult of terrains. This drilling program has allowed the team to modify its geological model for the area (which was based on sparse information) with the aim of identifying broad, favorable areas for the hosting of blind,

Morila-type mineralization. To complement the data from this drilling program a 40 by 40 kilometer ground, gravity survey has been completed, centered over the Morila deposit. Interpretation of the results indicates an arcuate anomaly immediately south of the deposit and both to the northeast and northwest of the grid. Modeling of the anomalies is underway in an attempt to establish what type of geological body is responsible.

Our joint ventures with Japanese company OMRD have been terminated following a full evaluation of the Kekoro, Sagala, Diamou and Seriba-Sobara permits, which did not meet our criteria for further investment.

In Southern Mali, our regional teams continue to identify opportunities and apply for new ground. This is in line with the long term strategy of turning over ground to supply the base of the resource triangle with quality targets.

Senegal

The Senegal portfolio consists of 5 permits covering 1,421 square kilometers, located within the Sabodala volcano-sedimentary belt in the east of the country. We have made progress throughout the field season in evaluating our portfolio where the emphasis has been on developing targets to the drill stage. A 10,000 meter RAB drilling program has commenced to test 12 targets. This will help in prioritizing additional targets to Delya, Bambaraya and Sofia for diamond drilling later in the year. The year's field programs also resulted in the rejection of 14 targets.

Delya was a new target identified during 2006 located on the Main Transcurrent Shear. This is a major terrain boundary structure between the greenstone belt and adjacent sedimentary basin. The target was identified by soil geochemistry, which defined a 6 kilometer by 100 meter plus 20ppb gold anomaly. Ten follow-up trenches have identified two parallel zones of gold mineralization over a 1 kilometer strike, the best results of which are; DLT003: 11.15 meters at 9.60g/t; DLT004: 4 meters at 1.60g/t; DLT005: 4.5 meters at 7.54g/t; DLT006: 7.45 meters at 1.98g/t and 9.90 meters at 4.96g/t; DLT008: 18 meters at 0.60g/t; DLT009: 2 meters at 5.39g/t and DLT010: 2.5 meters at 0.80g/t. The trench results have been tested at depth by five diamond core drill holes (1,000 meters); DLDD001: 9.81 meters at 1.80g/t; DLDD002: 12.40 meters at 5.10g/t; DLDD003: 3 meters at 1.80g/t; DLDD004: 3.80 meters at 4.80g/t and DLDD005 returned no mineralized intersection. Gold mineralization is hosted within a package of schists, strongly sheared, affected by silica-sericite-iron-graphite alterations. Sulfides are present as disseminated pyrite and arsenopyrite.

At Sofia, work concentrated on collating all the previous exploration data, as no drilling was done in 2006. Sofia is part of a seven kilometer anomalous north-south structural corridor which also hosts the Mikona, Mativa and Matiba targets within our permits. This system continues to the north for an additional 10 kilometers and hosts the Niakafiri deposit and Sabodala deposit. RAB drilling is planned in the gap areas to try and link all the Sofia, Mikona, Mativa and Matiba targets. So far 3.4 kilometers of strike have been tested by drilling where results return both broad, low-grade (44 meters at 2.00g/t) mineralization and narrow, high-grade (6 meters at 9.50g/t) intercepts. At present, the inter-hole spacing is 400 to 600 meters which will be infilled during the next round of drilling. In the meantime RAB drilling will test the Mikona, Mativa and Matiba targets within the Sofia corridor and the gaps in between.

At Bambaraya, trenching and early stage drilling has defined two sub-parallel zones of mineralization at surface, over a strike length of 1 kilometer. The best trench intersections returned

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

are; BBTR001: 13.20 meters at 3.59g/t, BBTR002: 18 meters at 2.93g/t, BBTR003: 8 meters at 4.50g/t, BBTR004: 12 meters at 4.06g/t and 4 meters at 5.48g/t, BBTR006: 14 meters at 2.01g/t and 9.5 meters at 1.13g/t. BBTR010: 16 meters at 1.70g/t and BBTR007: 18 meters at 2.26g/t. To date only three diamond drill holes have tested this zone with BBDDH002 returning the best intersection: 12 meters at 3.17g/t.

Mineralization is hosted within a sequence of northeast trending pillow basalts and is associated with silica-sericite-tourmaline-iron carbonate-pyrite alteration. Exploration work has been completed to the northeast of the known mineralization where a felsic intrusive has intruded the structure.

Burkina Faso

In Burkina Faso we made excellent progress over the last year:

- The development of a regional geological model.
- The consolidation of a plus 2,000 square kilometers permit portfolio in the south of the country, covering the southern extension of the Markoye fault and associated splays.
- The completion of the first phase of regional exploration across all the permits, which has identified a strong base of targets to the resource triangle.
- The identification of an advanced target, Kiaka, which has broad zones of low grade mineralization over a 3 kilometer strike length.
- The development of an all Burkinabe exploration team.

On the Kiaka permit a 9,040 meter, 549 hole RAB program was completed; testing three targets within the permit. The most advanced of these targets is Kiaka which also saw a 1,125 meter, 11 hole RC drilling and a six hole, 1,371 meter diamond core program completed testing a three kilometer long mineralized system.

Two styles of mineralization were identified from the drilling at Kiaka:

- A narrow high grade hangingwall zone; the mineralization is associated with strongly altered, (silica-biotite-chlorite) sulfide rich (5-22% arsenopyrite) sediment.
- A broad low grade main zone; the mineralization is associated with schists and quartzites and fine disseminated sulfides (pyrite).

These mineralized zones locate within a northeast trending, belt parallel, regional shear. Sinistral reactivation of north-south belt discordant structures has created dilational openings along the northeast regional shear and therefore preferential sites for mineralization.

The results of the drilling at Kiaka have identified a 3 kilometer long mineralized system, within which locates a 1.20 kilometer continuous zone of gold mineralization, 800 meters of which is 100 to 200 meters wide grading 0.80 to 1.60g/t and has been drill tested to vertical depths of 200 meters; it is open in all directions. The best intercept returned to date is from KDH05: 73 meters at 2.14g/t (from 41 meters) including 11 meters at 3.40g/t (from 44 meters) and 14 meters at 3.00g/t (from 58 meters). Infill and step out drilling are planned to commence in February 2007.

In addition, first pass regional soil geochemistry has been completed over the portfolio of nine permits. The results delineated 11 regional, 5 identified and 2 follow-up targets.

Ghana

In Ghana, we have made good progress with the completion of first pass regional exploration programs over our portfolio of four permits; three are to be relinquished following poor results, while one will be retained as it is yielding positive results. New applications are being made in discussions with the Minerals Commission.

On the Bole Northeast permit, an 800 meter by 100 meter regional soil sampling program has returned positive gold results.

A 25 kilometer long, northeast trending (060) anomalous corridor has been defined at the contact between granite and volcanoclastic sediments within which locate two target areas.

36

Table of Contents

- Zamsa consists of two sub parallel anomalies; the first is a >20 ppb gold in soil anomaly measuring 14 kilometers long by up to 2.5 kilometers wide. This anomaly is associated with the main regional Bole-Bolgatanga shear and locates at the contact between granite and volcanoclastic sediments. The second is a >10 ppb gold in soil anomaly measuring five kilometers long by one kilometer wide and is coincident with the axis of a regional airborne magnetic and electro magnetic anomaly within the volcanoclastic sediments.
- Navrongo locates five kilometers to the northeast of Zamsa along the same Bole-Bolgatanga shear. The 'gap' relates to a national forest which cannot be permitted.
- Ground truthing of anomalies indicates a gentle undulating topography with residual soils and poor outcrop. Test pitting is in progress to understand the regolith profile and mobile element dispersion prior to infill soil sampling.

Côte d'Ivoire

Geologically the Tongon area comprises a sub-vertical northeast to east-northeast trending package of intercalated clastic and mafic to intermediate volcano-sedimentary lithologies. These lithologies have been intruded in the central and northern regions by large oval shaped northeast trending granodiorite to quartz diorite igneous bodies. In the south, diorite dykes and small micro-gabbro bodies have intruded along east northeast to east trending structures. Mineralization locates in two zones; northern and southern.

Five holes were completed on the northern zone, further testing a 1.5 kilometer strike length of the main shear.

Three holes were completed in the southern zone to confirm the results of the prefeasibility study; the results are presented below.

The overall geometry of the mineralized zones suggests a significant component of dextral shear which is compatible with previous interpretations. Dilation occurs along east northeast orientated fault segments which appear to have been reactivated during mineralization. The main structural direction is northeast, representing belt parallel shearing, together with the presence of north-south belt discordant structures. The interaction between these two structural trends, in this case primary dextral movement along north-south trending faults, causes reaction of the northeast belt parallel structures and in turn creates dilation on the east-northeast structures.

A 30,000 meter diamond core drilling program to provide information for a feasibility study has commenced.

Tanzania

In Tanzania, generative work is the driver to build a new portfolio of projects; we are re-looking at the Southern Lake Victoria Goldfield, the Proterozoic mobile belts and new greenstone belts within the Craton.

An evaluation of the old Kiabakari mine was completed; RC and diamond core drilling tested the immediate vicinity of the old mine and a 2,000 meter strike along the Kiabakari fault. Anomalous values were returned along a 1,800 meter segment of the fault associated with three structures within a 300 meter wide corridor. However the main mineralization is confined to a 500 meter long by 35 meter wide zone grading 2 to 6g/t, within which the high grade payshoot, measuring approximately 100 meter by 30 meter grading plus 6g/t has been mined out to 350 meters below the surface and selectively to 500 meters below the surface.

We have fully tested the Kiabakari target and have concluded that there is no large mineralized system which fits our criteria for further investment. This project has been handed back to the government.

In the Mara Region, mapping and trenching have tested the Mara fault corridor which has been traced for 3 kilometers within the Nyabigena South permit. This fault system hosts the Nyabirama mine (1 million ounce resource), the Komarera deposit (400,000 ounces) in addition to two old colonial mines (Mara and Pontama).

37

Table of Contents

The results are encouraging with two 15 to 30 meter anomalous zones, within a 70 to 90 meter wide east-west structural corridor, locally mylonitic. Geologically the target is underlain by granodiorite gneisses with highly deformed and carbonated mafic dykes. The main alterations observed are sericite-silica-pyrite. Trench results from west to east include:

- NYTR17: 34 meters at 0.16g/t and 24 meters at 0.51g/t, including 14 meters at 0.82g/t.
- NYTR21: 16 meters at 0.10g/t and 18 meters at 1.10g/t.
- NYTR31: 22 meters at 0.61g/t and 20 meters at 0.10g/t.

An RC drill program will follow-up these results in 2007.

More regionally, three Barrick permits in the Singida-Dodoma region were incorporated into our current joint venture agreement.

AE – Reconnaissance License

EP – Exploitation Permit

EEP – Exclusive Exploration Permit

PL – Prospecting License

RL – Reconnaissance License

RP – Reconnaissance Permit

* Joint venture in which the company is currently earning an interest

Although we believe that our exploration permits will be renewed when they expire, based on the current applicable laws in the respective countries in which we have obtained permits, we cannot assure you that those permits will be renewed on the same or similar terms, or at all. In addition, although the mining laws of Mali, Côte d'Ivoire, Senegal, Burkina Faso, Ghana and Tanzania provide a right to mine should an economic orebody be discovered on a property held under an exploration permit, we cannot assure you that the relevant government will issue a permit that would allow us to mine. All mineral rights within the countries in which we are currently prospecting are state-owned. Our interests effectively grant us the right to develop and participate in any mine development on the permit areas.

New Business

We have continued to assess new business and merger and acquisition opportunities worldwide, while retaining a specific focus on organic growth within the African continent.

We have also continued to evaluate organic growth opportunities in the six countries in which we operate and commenced an initiative whereby an “African hunting team” has been tasked to review countries which are equally prospective for multi-million ounce gold deposits but were previously regarded as unsuitable because they ranked poorly. Countries will be selected on the basis that it is believed that the political and fiscal conditions could be changing for the better.

Distinct from the organic growth route we have also tested growth options through possible merger and acquisition opportunities. As part of this strategy we carried out due diligence audits, both desk top and on-site, during the year, within and outside Africa, including one full corporate due diligence. Examination of these projects confirmed none would fit our stated objective criteria that any corporate acquisition should be either demonstrably strategic or value enhancing for our shareholders.

Human Resources Report

We are committed to the integration of environmental and social impact management into our business activities. The optimum utilization of mineral and other resources encompasses the protection and conservation of the existing environment. Within this framework, we strive to assist the communities most affected by our operations to develop in a sustainable way and to give all our employees a high quality of work life, including a safe workplace.

Policy Statement

Our integrated social and environmental management process identifies potentially significant negative and positive impacts. The implementation of environmental and social responsibility strategies aims to minimize negative impacts and maximize the positive impacts of its activities, commensurate with our business strategy and within national and World Bank standards.

42

Table of Contents

The strategies we use to achieve this include the following:

- Encourage and reward the use of integrated environmental management to ensure that management decision making processes include a sensitive and holistic consideration of environmental issues. To facilitate this, all projects must include a comprehensive environmental and social impact assessment. Where appropriate, specialist consultants are employed.
- Maintain positive relationships with neighboring communities, local and national government authorities, NGOs and aid agencies and the public.
- Respect and consult with the communities in the areas affected by our operations so that these communities receive fair treatment and where possible benefit from our activities.
- Budget a percentage of profit to be used for sustainable community development projects. The projects are selected and prioritized in consultation with communities and carried out in cooperation with community members.

- Aim to forge a pact with employees through having respect for fundamental human rights, including workplace rights, employee development and the need for a healthy and safe workplace.
- Strive for the highest quality of rehabilitation, waste management and environmental protection in the most cost effective manner.
- Strive to optimize the consumption of energy, water and other natural resources.
- Through the introduction of new alternative environmentally friendly products and processes, as they become available, avoid the use or release of substances which, by themselves or through their manufacturing process, may damage the environment.
- Practice responsible environmental stewardship to meet the demands of local communities, host country government requirements and international standards and strive for continuous improvement of environmental performance.

Social Responsibility and Community Development

The sustainable development and social responsibility strategy forms an integral part of our overall business strategy and is implemented throughout all offices, projects and operations, including Morila. This strategy recognizes that the effectiveness of our community development efforts can be increased through forming synergistic alliances with professionals in the field, such as NGOs and aid agencies that have solid track records.

During 2006, Morila entered into a new three-way alliance with the aid agency, US AID, and the Commune of Sanso. The goal of this alliance is to address poverty reduction and accelerate economic growth in the communities in the villages around Morila mine, in support of the Government of Mali's decentralization goals.

The parties have agreed, through joint funding, to address:

- The improvement of governance, transparent planning and management of common resources at the commune level.
- Agricultural development.
- Improved commune managed communications.
- Basic education through teacher training.
- Improved community health.

This alliance will increase the annual amount spent on community development projects in the area from \$150,000 to \$275,000. Other major successes in community development at Morila this year have been the rice growing projects at Fingola and Morila. At Morila in 2006, a total of \$164,287 was expended by the mine on community development projects.

43

Table of Contents

At Loulo, the community liaison and development efforts, which have been ongoing since 1996, have been stepped up in this first full year of production. This year, co-operative projects between Loulo mine and villagers have seen more than \$175,196 expended by the mine on its social program. This amount does not reflect the costs of providing medical treatment, medical evacuations, medicines, vaccinations, creating disease awareness and education training.

The three pillars of community liaison and development program are basic education, food security and basic community health, which includes access to potable water.

Social program activities have included:

- The building, maintenance, and equipping of schools, as well as the subvention of teacher salaries.
- The establishment of micro agri-enterprises such as vegetable gardens, beekeeping in the villages, the provision of seeds, fertilizer and farming equipment and education and training in agricultural production and marketing.
- Drilling of bore holes and installing Indian pumps.
- Provision of medical treatment, medicines, and inoculations to local villagers.
- The evacuation of seriously ill villagers to hospitals in Bamako and Kayes.
- Malaria and HIV/AIDS educational and awareness campaigns in local villages.
- The introduction of malaria control programs such as spraying of the dwellings in local villages and distribution of mosquito nets.

The expenditure on the three pillars of our sustainable community development social program exceeded \$240,000 during 2006. The spin off from mining activities relate to the provision of secure and well paid employment enhancing the economies of the villages and impacting the lives of the employees and the welfare of their families. Further, the experience of being employed and the associated knowledge and skills gained gives employees a sustainable competitive advantage over others in the job market.

At a national level our business model facilitates development as we include establishing and maintaining effective local partnerships. In every country in which we operate, we have formed business partnerships with local businesses, fostered close relationships with the authorities and governments of the countries and where possible, purchases goods and services locally.

The financial contribution that an investor such as ourselves can make to a country such as Mali is significant. Through our investments in Loulo, Morila and exploration, we contribute to the economies of the countries in which we operate through payments of staff salaries, payments to government of payroll taxes, duties, royalties, dividends and to local businesses for goods and services.

During 2006, we maintained good relations with governments by continuing to meet regularly with officials of the authorities in Mali, Tanzania, Senegal, Ghana, Burkina Faso and Côte d'Ivoire.

Industrial Relations

The good industrial relations experienced during this year across the group reflect the continuing success of our pact with labor.

During 2006, Loulo broke all records in Mali for the establishment of a union, by holding union elections in co-operation with SYNACOM, the mining union confederation, and establishing a union at Loulo, within a few months of the commencement of operations there.

Manpower

Human Capital

As we develop and expand, every effort is made to employ excellent people. Through leadership, a sense of ownership and interpersonal influence, these people are motivated to contribute to our success.

Table of Contents

What needs to be done in the group is defined by consultative strategic planning, which is refreshed at regular intervals and is rolled down through our operations. This strategy provides the foundation for our long term plan (including manpower and succession plans), the fundamental principles of our business, the framework for effective decision making and the actions required of our employees, the initiating of change and improvements and, most importantly, a rallying point. It enables our business to organize its resources and optimize the application of our human capital.

At the mine level, Loulo's manpower and management succession plans were realized through the development of Malian professionals who have either already replaced expensive expatriates or will do so in the near future. During 2006, national managers became responsible for the posts of processing manager, maintenance manager, mining superintendent, and underground geologist. In addition, individuals have been earmarked and are completing final development, to succeed the expatriate incumbents of senior management posts. The general manager of Loulo, Amadou Konta, is a Malian graduate who has been with the group since its inception, and who has risen through the ranks to become the first Malian general manager of a large Malian gold mine in 2005. Together with Mahamadou Samaké, who is a senior executive of the company and a director of both Morila and Loulo, and our other senior managers, Amadou stands out as an excellent role model for young nationals throughout the company.

We believe this comes through our partnership philosophy of involving employees and other stakeholders such as suppliers and contractors in the business. All are kept fully informed about the business and how they can contribute to making it more successful. We believe this manifests itself in many aspects of our business and not just production — for instance having maintained an enviable safety and health record on our operations with both Syama and Morila having won the premier National Safety award in Malian industry. In the more recent past Loulo has had a fine record throughout the construction of the mine and the start-up of operations. On the health side, we have significantly reduced the incidence of diseases such as malaria in the areas in which we operate.

Voluntary turnover of our staff continues to be below 1% per annum.

Group Training and Development

We continue our support of the Malian Mining Industry University Scholarship scheme. Students are studying electrical engineering, geology, mining and chemical engineering. In addition, we continue our support of the Randgold Resources' Scholarship Award scheme for earth sciences students at the University of Senegal.

Regulatory and Environmental Matters

Our business is subject to extensive government and environment-related controls and regulations, including the regulation of the discharge of pollutants into the environment, disturbance of and threats to endangered species and other environmental matters. Generally, compliance with these regulations requires us to obtain permits issued by government agencies. Some permits require periodic renewal or review of their conditions. We cannot predict whether we will be able to renew those permits or whether material changes in permit conditions will be imposed. To the extent that the countries in which we have exploration and mining permits have no established environmental laws, we are currently working to ensure that our operations are in compliance with environmental standards set by the World Bank in relation to air emissions and water discharges. In accordance with our stated policy, we provide for estimated environmental rehabilitation costs based on the net present value of future rehabilitation cost estimates for disturbance to date.

We carry out our operations within the guidelines outlined in our social responsibility policy and in accordance with World Bank standards.

The Morila Mine obtained its International Standard Organization (ISO14001) certification during 2006. In the first year of production at the Loulo mine, ISO14001 training procedures were put in place with the aim of moving towards compliance.

At Loulo, the first phase of a cyanide detoxification process has commenced. This introduced a tailings thickener, which allows the return of water back into the process circuit. This facility should be

Table of Contents

commissioned in 2007. The second phase, due for implementation early in 2008, involves the destruction of cyanide using Degussa technology.

Marketing

We derive the majority of our income from the sale of gold produced by Morila and Loulo in the form of dore, which we sell under agreement to a refinery. Under these agreements, we receive the ruling gold price on the day after dispatch, less refining and freight costs, for the gold content of the dore gold. We have only one customer with whom we have an agreement to sell all of our gold production. The “customer” is chosen annually on a tender basis from a selected pool of accredited refineries and international banks to ensure competitive refining and freight costs. Unlike other precious metal producers, gold mines do not compete to sell their product given that the price is not controlled by the producers.

Property

Our operational mining area is comprised of Morila operations of 200 square kilometers and the Loulo mining permit of 372 square kilometers. Our exploration permits are detailed above.

We also lease offices in London, Dakar, Abidjan, Bamako, Ouagadougou, Mwanza, Accra, Johannesburg and Jersey.

In order to source certain services from South Africa, Seven Bridges Trading 14 (Proprietary) Limited, or Seven Bridges, a wholly owned subsidiary of ours was created.

Randgold Resources Limited has entered into a service agreement with Seven Bridges whereby Seven Bridges will provide certain administrative services to us, such as administrative and secretarial services, accounting, geological consultancy, purchase and logistics administration, legal and other general administrative services. Seven Bridges charges a monthly fee based on the total employment cost plus 50%.

Legal Proceedings

In August 2004, we entered into a fixed lump sum turnkey contract for \$63 million for the design, supply, construction and commissioning of the Loulo processing plant and infrastructure with MDM Ferroman (Pty) Ltd, or MDM. At the end of 2005, after making advances and additional payments to MDM totaling \$26 million in excess of the contract, we determined that MDM was unable to perform its obligations under the MDM Contract, at which time

we enforced a contractual remedy which allowed us to act as our own general contractor and to complete the remaining work on the Loulo project that was required under the MDM Contract.

We believe that we are entitled to recover \$59.3 million from MDM. This comprises payments totaling \$32 million which have been capitalized as part of the cost of the project, \$15.2 million in respect of damages arising from the delayed completion of the project, and advances of \$12.1 million (2005: \$12.2 million) included in receivables. Of this latter amount, \$7 million is secured by performance bonds and the remainder is secured by various personal guarantees and other assets.

As part of our efforts to recoup the monies owed to us, MDM was put into liquidation on February 1, 2006. This resulted in a South African Companies Act Section 417 investigation into the business and financial activities of MDM, its affiliated companies and their directors. This investigation is ongoing, and the liquidators are not expected to release a statement of MDM's assets and liabilities until the investigation has been completed.

We believe that we will be able to recover in full the \$12.1 million included in receivables. However, this is dependent on the amounts which can be recovered from the performance bonds, personal guarantees and other assets provided as security. Any shortfall is expected to be recovered from any free residue accruing to the insolvent estate. The aggregate amount which will ultimately be recovered cannot presently be determined. The financial statements do not reflect any additional provision that may be required if the \$12.1 million cannot be recovered in full.

46

Table of Contents

Recovery of the other \$47.2 million is dependent on the extent to which our claim is accepted by the liquidators and the amount in the free residue. The ultimate outcome of this claim cannot presently be determined and there is significant uncertainty surrounding the amount that will ultimately be recovered. The financial statements do not reflect any adjustment to the cost of the Loulo development that may arise from this claim, or any additional income that may arise from the claim for damages, or any charge that may arise from MDM's inability to settle amounts that are determined to be payable by MDM to us in respect of the Loulo development.

Other than as disclosed above we are not party to any material legal or arbitration proceedings, nor is any of our property the subject of pending material legal proceedings.

Health and Safety Regulations

Morila and Loulo have a Hygiene and Security Committee made up of elected labor and specialist management representatives, as outlined in the respective labor code. This committee designates, from its members, a consultative technical sub-committee charged with the elaboration and application of a concerted policy of improvement of health and security conditions at work. Its composition, attributions and operational modalities are determined by legal provisions and regulations.

The chairman of this committee coordinates monthly committee meetings, sets the agendas with his secretariat, monitors resolutions and signs off on committee determinations.

The committee's secretariat ensures under the supervision of the chairman that:

-

follow-up activities such as action resulting from the regular surveys and inspections are carried out; and

- health and safety manuals and updates are distributed, posters are posted on notice boards and safety committee minutes and reports are distributed.

Each mine's medical officer sits on the Hygiene and Security Committee and advises on the following:

- working conditions improvements;
- general hygiene on the operation;
- ergonomics;
- protection of workers safety in the workplace; and
- medical checks and eye and ear testing.

The Hygiene and Security Committee forms, from within its membership, two consultative commissions, the Commission of Inquiry and the Educational Commission. The Commission of Inquiry:

- investigates accidents and makes recommendations to avoid repetitions;
- ensures plant, machinery and equipment have adequate protection to avoid injury; and
- updates and revises safety and health manuals.

The Educational Commission:

- provides information and training on safe practices and potential risks;
- provides first aid training;
- administers and promotes the safety suggestion scheme; and
- explains, where necessary, the contents of the safety and health manual.

47

Table of Contents

All employees are covered by the state's social security scheme and our medical reimbursement scheme, that reimburses a large portion of expenses related to medical treatment and medicines. Dental and optical expenses are also covered to 50%.

No post-employment medical aid liability exists for the group.

48

Table of Contents

C. ORGANIZATIONAL STRUCTURE

The following chart identifies our subsidiaries and joint venture and our percentage ownership in each subsidiary:

D. PROPERTY, PLANT AND EQUIPMENT

For a discussion of our principal properties, including mining rights and permits, see "Item 4. Information on the Company — A. History and Development of the Company" and "Item 4. Information on the Company — B. Business

Overview”. We have all material legal rights necessary to entitle us to exploit such deposits in respect of the Morila mine in Mali to April 2022, and Loulou in Mali to 2029.

The exploration permits in Côte d’Ivoire, Mali, Senegal, Burkina Faso, Ghana and Tanzania give us the exclusive right for a fixed time period, which is open to renewal, to prospect on the permit area.

Once a discovery is made, we, as the permit holder, then commence negotiations with the respective governments as to the terms of the exploration or mining concession. Depending on the country, some of the terms are more open to negotiation than others, but the critical areas which can be agreed to are the government’s interest in the mine, taxation rates and taxation holidays, repatriation of profits and the employment of expatriates and local labor.

Item 4A. Unresolved Staff Comments

None.

Item 5. Operating and Financial Review and Prospects

Statements in this Annual Report concerning our business outlook or future economic performance; anticipated revenues, expenses or other financial items; and statements concerning assumptions made or expectations as to any future events, conditions, performance or other matters, are “forward-looking statements” as that term is defined under the United States Federal securities laws. Forward-looking statements are subject to risks, uncertainties and other factors which could cause actual results to differ materially from those stated in such statements. Factors that could cause

49

Table of Contents

or contribute to such differences include, but are not limited to, those set forth under “Item 3. Key Information — D. Risk Factors” in this Annual Report as well as those discussed elsewhere in this Annual Report and in our other filings with the Securities and Exchange Commission.

General

We earn substantially all of our revenues in US dollars and a large proportion of our costs are denominated or based in US dollars, excluding the Morila mining contract which is partially denominated in Euros. We also have South African Rand, Communauté Financière Africaine franc and Pound Sterling denominated costs, which are primarily wages and material purchases.

Impact of Malian Economic and Political Environment

We are a Jersey incorporated company and are not subject to income taxes in Jersey. Our current significant operations are located in Mali and are therefore subject to various economic, fiscal, monetary and political policies and factors that affect companies operating in Mali, as discussed under “Item 3. Key Information — D. Risk Factors — Risks Relating to Our Operations”.

Impact of Favorable Tax Treaties

Morila SA benefited from a five year tax holiday until November 14, 2005. Loulo SA also benefits from a five year tax holiday in Mali. The tax holiday commenced on November 8, 2005. The benefit of the tax holiday to the group was to increase its net income by \$9.1 million, \$22.6 million and \$6.6 million for the years ended December 31, 2006, 2005 and 2004 respectively.

Under Malian tax law, income tax is based on the greater of 35 % of taxable income or 0.75 % of gross revenue.

The Morila and Loulo operations have no unused assessable capital expenditure carry forwards or assessable tax losses, as at December 31, 2006 and 2005 respectively, for deduction against future mining income.

Revenues

Substantially all of our revenues are derived from the sale of gold. As a result, our operating results are directly related to the price of gold. Historically, the price of gold has fluctuated widely. The gold price is affected by numerous factors over which we have no control. See “Item 3. Key Information — D. Risk Factors — Risks Relating to Our Operations — The profitability of our operations, and the cash flows generated by our operations, are affected by changes in the market price for gold which in the past has fluctuated widely”.

We follow a hedging strategy the aim of which is to secure a floor price which is sufficient to protect us in periods of significant capital expenditure and debt finance, while at the same time allowing significant exposure to the spot gold price. Accordingly, we have made use of hedging arrangements. Under the terms of the Morila project loan, we were required to hedge 50% of approximately 36% of Morila’s first 5 years of production. The last remaining hedges were closed out during 2004.

Our financing arrangements for the development of Loulo include provisions for gold price protection. At March 31, 2007, 264,994 ounces had been sold forward at an average price of \$436 per ounce. This represents approximately 32% of planned open pit production at Loulo for the period that the project finance is in place.

Significant changes in the price of gold over a sustained period of time may lead us to increase or decrease our production, which could have a material impact on our revenues.

50

Table of Contents

Our Realized Gold Price

The following table sets out the average, the high and the low afternoon London Bullion Market fixing price of gold and our average US dollar realized gold price during the years ended December 31, 2006, 2005, and 2004.

	Year Ended December 31,		
	2006	2005	2004
Average	604	444	409
High	725	537	454
Low	525	411	375
Average realized gold price	571 ⁽¹⁾	449 ⁽¹⁾	382 ⁽¹⁾

(1) Our average realized gold price differs from the average gold price as a result of the timing of our gold deliveries and different realized prices achieved on the hedge book.

Costs and Expenses

Our operations currently comprise two open pit operations mined by contractors. Milling operations are undertaken by the group's own employees. Total cash costs in the year ended December 31, 2006 as defined by guidance issued by the Gold Institute made up approximately 69% of total costs and expenses and comprised mainly mining and milling costs, including, labor and consumable stores costs. Consumable stores costs include diesel and reagent costs. Contractor costs represented 40% of total cash costs, with diesel and reagent costs making up 38% of total cash costs. Direct labor costs accounted for approximately 7% of total cash costs. For a definition of total cash costs, please refer to "Item 3 — Key Information".

The price of diesel acquired for the Morila and Loulo operations increased during the year ended December 31, 2006 which impacted negatively on total cash costs. Should these prices increase further, this could impact significantly on total cash costs mainly as a result of the high volume of diesel consumed to generate power and to run the mining fleet. Mining contractor costs, which are Euro denominated at Morila, also increased during 2006.

The remainder of our total costs and expenses consists primarily of amortization and depreciation, exploration costs, exchange losses, interest expense and general administration or corporate charges.

Loulo currently benefits from a three-year duty exemption period, which ends on November 8, 2008. Duties will become payable in accordance with the Malian duty regime on all imported goods. On average, it is anticipated that this has the effect of increasing the costs of imported goods by 7%, which equates to an overall increase of 1% on total costs.

Looking Forward

Loulo's 2007 production is scheduled to exceed 250,000 ounces, of which 43,923 ounces are hedged using forward gold sales. The underground development at Yalea is underway and should access first ore towards the end of 2007 with full production due in 2009. Yalea is the first of the two Loulo underground mines, and is currently a bigger ore body with higher grades than the Gara deposit. The underground mines are expected to not only add life to Loulo but to increase levels of annual production to in excess of 400,000 ounces in 2011.

Life of mine scheduling at Morila anticipates production for 2007 to be approximately 500,000 ounces. Morila continues to be a significant cash generator with little debt and no hedging.

Total cash costs for the group are estimated to increase year on year between 10% and 15%, depending on diesel price assumptions and the gold price which impacts on the royalties to be paid to the Government of Mali.

The final feasibility study has commenced at Tongon. This will take approximately 24 months and cost approximately \$10 million.

51

Table of Contents

In the coming year, we plan to spend similar amounts to 2006 on exploration and corporate activities.

Critical Accounting Policies

Our significant accounting policies are more fully described in note 2 to our consolidated financial statements. Some of our accounting policies require the application of significant judgment by management in selecting the appropriate assumptions for calculating financial estimates. By their nature, these judgments are subject to an inherent degree of uncertainty and are based on our historical experience, terms of existing contracts, management's view on trends in the gold mining industry and information from outside sources.

Management believes the following critical accounting policies, among others, affect the more significant judgments and estimates used in the preparation of our consolidated financial statements and could potentially impact our financial results and future financial performance.

Joint Venture Accounting

We account for our investment in joint ventures by incorporating our proportionate share of the joint ventures' assets, liabilities, income, expenses and cash flows in the consolidated financial statements under appropriate headings. Should this method of accounting not be permitted in the future, the results of each joint venture would need to be equity accounted. This would require the recognition in the income statement, on a separate line, of our share of the joint ventures' profit or loss for the year. Our interest in the joint venture would be carried on the balance sheet at an amount which would reflect our share of the net assets of the joint venture.

This would result in a presentation of our balance sheet and income statement that differs significantly from the current presentation, but would have no impact on our net income or our net asset value.

Depreciation and Amortization of Mining Assets

Depreciation and amortization charges are calculated using the units of production method and are based on tonnes processed through the plant as a percentage of total expected tonnes to be processed over the lives of our mines. A unit is considered to be produced at the time it is physically removed from the mine. The lives of the mines are based on proven and probable reserves as determined in accordance with the Securities and Exchange Commission's industry guide number 7. The estimates of the total expected future lives of our mines could be materially different from the actual amounts of gold mined in the future and the actual lives of the mines due to changes in the factors used in determining our mineral reserves. These factors could include: (i) an expansion of proven and probable reserves through exploration activities; (ii) differences between estimated and actual cash costs of mining, due to differences in grade, metal recovery rates and foreign currency exchange rates; and (iii) differences between actual gold prices and gold price assumptions used in the estimation of reserves. Such changes in reserves could similarly impact the useful lives of assets depreciated on a straight-line basis, where those lives are limited to the life of the mine, which in turn is limited to the life of the proven and probable reserves.

Valuation of Long-Lived Assets

Management compares the carrying amounts of property, plant and equipment to the recoverable amount of the assets whenever events or changes in circumstances indicate that the net book value may not be recoverable. In determining if the asset can be recovered, we compare the recoverable amount to the carrying amount. If the carrying amount exceeds the recoverable amount, we will record an impairment charge in the income statement to write down the asset to the recoverable amount. To determine the value in use amount, management makes its best estimate of the future cash inflows that will be obtained each year over the life of the mine and discounts the cash flow by a rate that is based on the time value of money adjusted for the risk associated with the applicable

Table of Contents

project. In estimating future cash flows, assets are grouped at the lowest level for which there are identifiable cash flows that are largely independent of future cash flows from other asset groups. With the exception of mine-related exploration potential, all assets at a particular operation are considered together for purposes of estimating future cash flows.

These reviews are based on projections of anticipated future cash flows to be generated by utilizing the long-lived assets. While management believes that these estimates of future cash flows are reasonable, different assumptions regarding projected gold prices and production costs as discussed above under depreciation and amortization of mining assets could materially affect the anticipated cash flows to be generated by the long-lived assets. The ability to achieve the estimated quantities of recoverable minerals from exploration stage mineral interests involves further risks in addition to those factors applicable to mineral interests where proven and probable reserves have been identified, due to the lower level of confidence that the identified mineralized material can ultimately be mined economically.

Hedging and Financial Derivatives

We account for our hedging and financial derivatives in accordance with International Accounting Standard No. 39 Financial Instruments: Recognition and Measurement, or IAS 39. The determination of the fair value of hedging instruments and financial derivatives, when marked-to-market, takes into account estimates such as projected interest rates under prevailing market conditions, depending on the nature of the hedging and financial derivatives.

These estimates may differ materially from actual gold prices, interest rates and foreign currency exchange rates prevailing at the maturity dates of the hedging and financial derivatives and, therefore, may materially influence the values assigned to the hedging and financial derivatives, which may result in a charge to or an increase in our earnings at the maturity date of the hedging and financial derivatives. Certain hedging and financial derivatives are accounted for as cash flow hedges, whereby the effective portion of changes in fair market value of these instruments are deferred in other reserves and will be recognized in the consolidated income statement when the underlying production designated as the hedged item is sold. All derivative contracts qualifying for hedge accounting are designated against the applicable portion of future production from proven and probable reserves, where management believes the forecasted transaction is probable of occurring. To the extent that management determines that such future production is no longer probable of occurring due to changes in the factors impacting the determination of reserves, as discussed above under amortization of mining assets, gains and losses deferred in other reserves would be reclassified to the consolidated income statement immediately.

Environmental Rehabilitation Costs

We provide for environmental rehabilitation costs and related liabilities based on our interpretations of current environmental and regulatory standards with reference to World Bank guidelines. Final environmental rehabilitation obligations are estimated based on these interpretations and in line with responsible programs undertaken by similar operations elsewhere in the world. While management believes that the environmental rehabilitation provisions made are adequate and that the interpretations applied are appropriate, the amounts estimated may differ materially from the costs that will actually be incurred to rehabilitate our mine sites in the future.

Deferred Stripping

We changed our accounting policy on stripping costs, under both IFRS and US GAAP, in the 2006 financial year. Previously, costs of production stage waste stripping in excess of the expected pit life average stripping ratio were

deferred and then charged to production when the actual stripping ratio was below the expected pit life average stripping ratio. Under the revised accounting policy, all stripping costs incurred during the production phase of a mine are treated as variable production costs and as a result are included in the cost of the inventory produced during the period that the stripping costs are incurred. The change has been applied by retroactively adjusting prior periods as if the revised policy has always been applied. For further information, refer to note 6 of our audited consolidated financial statements.

Table of Contents

Recent accounting pronouncements

IFRS

- IFRS 8 Operating Segments (effective for annual periods beginning on or after January 1, 2009)

The objective of this IFRS is to require entities to disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates. The group will apply IFRS 8 from January 1, 2009, but it is not expected to have any impact on the accounts of the group.

- IFRS 7 Financial Instruments Disclosure (effective for annual periods beginning on or after January 1, 2007)

The objective of this IFRS is to require entities to provide disclosures in their financial statements that enable users to evaluate the significance of financial instruments for the entity's financial position; and the nature and extent of risks arising from financial instruments to which the entity is exposed during the period and at the reporting date, and how the entity manages those risks. The effect of the adoption of the standard is currently being assessed; however a significant impact on disclosures is expected.

- IFRIC Interpretation 8 Scope of IFRS 2 (effective for annual periods beginning on or after May 1, 2006)

The interpretation determines whether IFRS 2 applies to transactions in which the entity cannot identify specifically some or all of the goods or services received. The group will apply IFRIC 8 from January 1, 2007, but it is not expected to have any impact on the accounts of the group.

- IFRIC Interpretation 9 Reassessment of Embedded Derivatives (effective for annual periods beginning on or after June 1, 2006)

The interpretation applies to all embedded derivatives under IAS 39 'Financial Instruments: Recognition and Measurement' and clarifies certain aspects of their treatment. The group will apply IFRIC 9 from January 1, 2007, but it is not expected to have any impact on the accounts of the group.

- IFRIC Interpretation 10 Interim Financial Reporting and Impairment (effective for annual periods beginning on or after November 1, 2006)

An entity is required to assess goodwill for impairment at every reporting date, to assess investments in equity instruments and in financial assets carried at cost for impairment at every balance sheet date and, if required, to recognize an impairment loss at that date in accordance with IAS 36 and IAS 39. However, at a subsequent reporting or balance sheet date, conditions may have so changed that the impairment loss would have been reduced or avoided

had the impairment assessment been made only at that date. This Interpretation provides guidance on whether such impairment losses should ever be reversed. The group will apply IFRIC 10 from January 1, 2007, but it is not expected to have any impact on the accounts of the group.

- IFRIC Interpretation 11 IFRS 2 Share-based Payment — Group and Treasury Share Transactions (effective for annual periods beginning on or after March 1, 2007)

This interpretation addresses the classification of a share-based payment transaction (as equity- or cash-settled), in which equity instruments of the parent or another group entity are transferred, in the financial statements of the entity receiving the services. The group will apply IFRIC 11 from January 1, 2008, but it is not expected to have any impact on the accounts of the group.

- IFRIC Interpretation 12 Service Concession Arrangements (effective for annual periods beginning on or after January 1, 2008)

This interpretation provides guidance to private sector entities on certain recognition and measurement issues that arise in accounting for public to private service concession arrangements. The group will apply IFRIC 12 from January 1, 2008, but it is not expected to have any impact on the accounts of the group.

54

Table of Contents

US GAAP

Income Taxes

In June 2006, the Financial Accounting Standards Board, or FASB, issued FASB Interpretation No. 48, “Accounting for Uncertainty in Income Taxes — an interpretation of FASB Statement No. 109”, or FIN 48. This Interpretation clarifies the accounting for uncertainty in income taxes recognized in an enterprise’s financial statements in accordance with FASB Statement No. 109, “Accounting for Income Taxes”. This Interpretation prescribes a recognition threshold and measurement attribute for the financial statements recognition and measurement of a tax position taken or expected to be taken in a tax return. This Interpretation also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. This statement is effective for years beginning on or after January 1, 2007. We are currently evaluating the impact of adoption of FIN 48 on our financial statements.

Fair Value Measurements

In September 2006, the FASB issued FASB Statement No. 157, “Fair Value Measurements”, or FAS 157. FAS 157 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurement. The provisions of FAS 157 are effective for our fiscal year ending December 31, 2008. We are currently evaluating the impact that the adoption of this statement will have on our financial statements.

A. OPERATING RESULTS

Our operating and financial review and prospects should be read in conjunction with our consolidated financial statements, accompanying notes thereto, and other financial information appearing elsewhere in this Annual Report.

Years Ended December 31, 2006 and 2005

Product Sales

From the year ended December 31, 2005 to the year ended December 31, 2006, total revenues from gold sales increased by \$106.8 million, or 70.5%, from \$151.5 million to \$258.3 million. This was due to 119,814 more attributable ounces available for sale as a result of Loulo's first full year of production and an improved average gold price per ounce of \$576 for 2006 (which includes the impact of losses on hedges) compared to \$449 for 2005. These elements were partially offset by lower head grade milled at both Loulo (29% decrease) and Morila (29% decrease). At Loulo the head grade milled decreased year on year due to only two months of oxide material that was milled during 2005, compared to a full year of oxide and sulphide materials milled during 2006.

Interest Income

Interest income amounts consist primarily of interest received on cash held at banks. Interest income of \$7.4 million for the year ended December 31, 2006, increased by \$5.3 million or 252% from \$2.1 million for the year ended December 31, 2005. This is due to higher average cash balances held throughout 2006 compared to 2005 following the issue of shares in November 2005, as well as an increase in the effective interest rate on bank deposits. The effective interest rate for 2006 was 4.82% compared to 2.77% in 2005.

Other Income

Other income totaled \$1.2 million for the year ended December 31, 2006 compared to \$1.3 million for the year ended December 31, 2005. It consists mainly of cost recoveries of \$0.8 million, which are fees recovered from exploration joint ventures. No royalty pertaining to the Syama mine has been received in respect of the year ended December 31, 2006.

55

Table of Contents

Costs and Expenses

Total Cash Costs

The following table sets out our total ounces produced and total cash cost and production cost per ounce for the years ended December 31, 2006 and 2005:

	Year Ended December 31,		Year Ended December 31,	
	2006	2005	2006	2005
	Ounces	\$ Per Ounce	Ounces	\$ Per Ounce
Morila (40% share) cash costs	206,667	258	260,444	210‡
Loulo (100% share) cash costs	241,575	328	67,984	165
Total ounces (attributable production)	448,242		328,428	
Group total cash cost*		296		201‡

Total production cost per ounce under IFRS†	347	237‡
---	-----	------

* For a definition of cash costs, please see ‘‘Item 3. Key Information — A. Selected Financial Data’’.

†Total production cost includes total cash costs and also the depreciation and amortization cost which is discussed below.

‡Restated due to change in accounting policy related to stripping costs. Refer to note 6 of our audited consolidated financial statements.

From the year ended December 31, 2005 to the year ended December 31, 2006, our group total cash cost per ounce increased \$95 per ounce, or 47%, from \$201 per ounce to \$296 per ounce. Industry wide cost pressures have continued resulting from the weak dollar, which increases the US dollar value of costs in other currencies such as Euros, high diesel and steel prices and contract mining costs. Despite these cost pressures, costs have been well controlled at both Loulo and Morila and the lower grade processed is the main factor contributing to the increased cost per ounce. Grades have decreased from 5.9 g/t in 2005 at Morila to 4.2 g/t in 2006, and at Loulo from 4.5 g/t to 3.2 g/t as per the respective life of mine plans.

Royalties increased by \$6.7 million, or 65%, from \$10.3 million for the year ended December 31, 2005 to \$17 million for the year ended December 31, 2006. The increased royalties reflect increased gold sales and a higher gold price received.

General and administrative costs comprise various expenses associated with providing on mine administration support services to the Morila and Loulo mine. These charges increased to \$13 million for the year ended December 31, 2006 from \$7.4 million for the year ended December 31, 2005 reflecting the first full year of production at Loulo.

Depreciation and Amortization

Depreciation and amortization charges increased from \$11.9 million for the year ended December 31, 2005 to \$22.8 million for the year ended December 31, 2006. This is mainly the result of Loulo’s first full year of production. Depreciation of \$16.6 million was charged at Loulo during 2006.

Interest Expense

Interest expense for the year ended December 31, 2006 was \$5.8 million and comprised mainly of the interest on the Loulo project loan, as well as interest on the Loulo Caterpillar finance lease. The interest expense for the year ended December 31, 2005 was \$1.9 million and the increase year on year is mainly the result of an increase in the weighted average Loulo project loan balance outstanding, the capitalization of interest in 2005 on the Loulo development and increased interest rates. The weighted average interest rate on the Loulo project loan increased from 5.14% in 2005 to 6.83% in 2006.

56

Table of Contents

Other Losses/(Gains) — Net

The loss of \$0.7 million for the year ended December 31, 2006 and the gain of \$0.05 million for the year ended December 31, 2005 relate to the ineffective loss/(profit) portion of hedging contracts previously recognized.

The mark-to-market valuation of the Loulo hedge book is treated as a cash flow hedge and the hedge effective component of changes in fair value are accounted for through equity until the hedged items are sold.

Exploration and Corporate Expenditure

Exploration and corporate expenditure was \$28.8 million for the year ended December 31, 2006, and \$24 million for the year ended December 31, 2005. The increase of \$4.8 million from the previous year is a reflection of increased exploration activity, in particular drilling. Extensive drilling programs were undertaken in all countries in which we operate except for Ghana.

Exchange Losses — Net

The exchange losses for the year ended December 31, 2006 of \$1 million and \$2.1 million for the year ended December 31, 2005 relate primarily to Morila and Loulo and result from the weakening of the US dollar against other currencies in which goods and services are denominated.

Other Expenses

Other expenses of \$0.7 million for the year ended December 31, 2006 and of \$0.8 million for the year ended December 31, 2005 relate to current asset write-offs.

Income Tax Expense

The income tax expense amounted to \$23.1 million for the year ended December 31, 2006 (2005: \$0.2 million). The increase in the tax expense is the result of the first full year of corporate tax at Morila. Morila SA benefited from a five year tax holiday until November 14, 2005. Loulo SA also benefits from a five year tax holiday in Mali. The tax holiday commenced on November 8, 2005. Under Malian tax law, income tax is based on the greater of 35% taxable income or 0.75% of gross revenue.

Minority Interests

The minority interests for the years ended December 31, 2006 and December 31, 2005 represent the 20% minority share of the profits at Loulo since production commenced in November 2005.

Years Ended December 31, 2005 and 2004

Product Sales

From the year ended December 31, 2004 to the year ended December 31, 2005, total revenues from gold sales increased by \$78.2 million, or 106.7%, from \$73.3 million to \$151.5 million. This was mainly due to 110,637 more attributable ounces available for sale as a result of Loulo commencing commercial operations as well as an increase in head grade from 5.20g/t to 5.90 g/t at Morila, compounded by an increase of 3.8% in recoveries, an increase in throughput of 7.1% and an improved average gold price per ounce of \$449 for 2005 compared to \$382 for 2004.

Interest Income

Interest income amounts consist primarily of interest received on cash held at banks. Interest income of \$2.1 million for the year ended December 31, 2005, doubled from interest income of \$1 million for the year ended December 31, 2004. The increase is due to increased funds invested, as a result of the funds raised from the public offering completed in November 2005, as well as improved cash flows from operations.

Table of Contents

Other Income

Other income of \$1.3 million for the year ended December 31, 2005 compares with \$1.5 million (excluding the profit on sale of Syama) for the year ended December 31, 2004 and consists mainly of cost recoveries of \$0.6 million, which are fees recovered from exploration joint ventures and various other income received at Morila and on a corporate level. No royalty pertaining to the Syama mine has been received in respect of the year ended December 31, 2005.

Costs and Expenses

Total Cash Costs

The following table sets out our total ounces produced and total cash cost and production cost per ounce for the years ended December 31, 2005 and 2004:

	Year Ended December 31,			
	2005		2004	
	Ounces	\$ Per Ounce	Ounces	\$ Per Ounce
Morila (40% share) cash costs	260,444	210‡	204,194	208‡
Loulo (100% share) cash costs	67,984	165	—	—
Total ounces (attributable production)	328,428		204,194	
Group total cash cost*		201‡		208‡
Total production cost per ounce under IFRS†		237‡		250‡

* For a definition of cash costs, please see “Item 3. Key Information — A. Selected Financial Data”.

† Total production cost includes total cash costs and also the depreciation and amortization cost which is discussed below.

‡ Restated due to change in accounting policy relating to stripping costs. Refer to note 6 of our audited consolidated financial statements.

From the year ended December 31, 2004 to the year ended December 31, 2005, our group total cash cost per ounce decreased \$7 per ounce, or 3%, from \$208 per ounce (restated) to \$201 per ounce (restated), as a result of the start of production at Loulo at reasonable costs, partially offset by increases in diesel and mining contractor costs at Morila and lower head grade.

Royalties increased by \$5 million, or 94%, from \$5.3 million for the year ended December 31, 2004 to \$10.3 million for the year ended December 31, 2005. The increased royalties reflect increased gold sales and a higher gold price.

General and administrative costs comprise various expenses associated with providing on mine administration support services to the Morila and Loulo mine. These charges increased to \$7.4 million for the year ended December 31, 2005 from \$6.8 million for the year ended December 31, 2004 reflecting the commencement of production at Loulo from November 2005.

Depreciation and Amortization

Depreciation and amortization charges increased from \$8.7 million for the year ended December 31, 2004 to \$11.9 million for the year ended December 31, 2005. This is mainly the result of Loulo commencing production in

November 2005. This led to depreciation of \$4.7 million being charged at Loulo since November 2005.

Interest Expense

Interest expense for the year ended December 31, 2005 was \$1.9 million and comprised mainly of the interest on the Somilo project loan, which funds were sourced for the construction of the Loulo mine. The interest expense for the year ended December 31, 2004 was \$1.6 million and consisted mainly of interest on our share of the Morila project financing facility. The Morila facility was fully repaid in June 2004.

58

Table of Contents

Other Losses / (Gains)—Net

The gain on derivative financial instruments of \$0.05 million for the year ended December 31, 2005 relates to the hedge ineffective fair value movement of financial instruments previously deferred in equity. The gain on financial instruments of \$2.2 million for the year ended December 31, 2004 represents the change in the fair value of those derivative financial instruments that we use to hedge our exposure to gold but which do not meet the criteria for formal hedge accounting under IFRS.

The mark-to-market valuation of the Loulo hedge book is treated as cash flow hedge and the hedge effective component of changes in fair value are accounted for through equity until the hedged items are sold.

Exploration and Corporate Expenditure

Exploration and corporate expenditure was \$24 million for the year ended December 31, 2005, and \$16.9 million for the year ended December 31, 2004. The increase of \$7.1 million from the previous year is a reflection of an increase in executive bonuses, salaries paid as well as share based payments.

Exchange Losses — Net

The exchange losses for the year ended December 31, 2005 of \$2.1 million and \$0.6 million for the year ended December 31, 2004 relate primarily to Morila and Loulo and result from the weakening of the US dollar against other currencies in which goods and services are denominated.

Other Expenses

Other expenses of \$0.8 million for the year ended December 31, 2005 relates to current asset write-offs. Other expenses of \$1.1 million for the year ended December 31, 2004 consist mainly of costs associated with the care and maintenance of Syama for the period ending March 2004 and insurance costs.

Income Tax Expense

The income tax expense amounted to \$0.2 million for the year ending December 31, 2005. The tax expense is the result of the tax holiday at Morila SA that ended on November 14, 2005. Morila SA benefited from a five year tax holiday until then. Loulo SA also benefits from a five year tax holiday in Mali. The tax holiday commenced on November 8, 2005. Under Malian tax law, income tax is based on the greater of 35% taxable income or 0.75% of

gross revenue.

Minority Interests

The minority interest for the year ended December 31, 2005 represents the 20% minority share of the profits at Loulo since production commenced in November 2005. No minority interest was recognized in 2004, as all costs directly related to the construction of the Loulo mine were capitalized and the Syama mine was sold in April 2004.

B. LIQUIDITY AND CAPITAL RESOURCES

Cash Resources

The group had \$143.4 million cash and cash equivalents as at December 31, 2006 (2005: \$152.5 million).

Operating Activities

Net cash provided by operating activities was \$71.6 million for the year ended December 31, 2006 and \$29.7 million for the year ended December 31, 2005. The \$40.7 million increase was mainly the result of the first full year of production at Loulo and higher average gold prices received.

59

Table of Contents

Receivables include \$18.4 million net of a provision to reflect the time value of money (2005: \$20 million) relating to indirect taxes owing to Morila SA and Loulo SA by the State of Mali. Receivables also include advances made to a contractor at Loulo totaling \$11.8 million net of a provision to reflect the time value of money (2005: \$12.2 million). Significant uncertainties exist relating to the recoverability of the advances to the contractor. More detail is given in note 23 of our audited consolidated financial statements.

Net cash provided by operating activities was \$29.7 million for the year ended December 31, 2005 and \$4.3 million for the year ended December 31, 2004. The \$25.4 million increase was mainly the result of an improved average gold price received, higher grades and higher production at Morila, as well as production commencing at Loulo from November 2005.

Investing

Investing activities for the year ended December 31, 2006 utilized \$62.6 million compared to \$84.5 million for the year ended December 31, 2005. This is due to less being spent in 2006 on the Loulo capital project compared to 2005. Only \$31.7 million was spent in 2006 on the completion of the project. \$17.6 million was also spent on underground equipment and the commencement of the decline shaft sinking at Loulo. The decrease in cash utilized in investing activities year on year is also the result of no advances made to Loulo contractors in 2006 (2005: \$11.3 million advanced).

Investing activities for the year ended December 31, 2005 utilized \$84.5 million compared to \$57 million utilized for the year ended December 31, 2004. The increase in cash utilized in investing activities year on year is mainly the result of increased development expenditure incurred on the Loulo construction project, as well as advances made to Loulo contractors in 2005. In addition, we received \$8.6 million from the sale of Syama in 2004.

Financing

Financing activities for the year ended December 31, 2006 utilized net cash of \$18.1 million compared to net cash generated of \$129 million for the year ended December 31, 2005. The net cash generated in the year ended December 31, 2005 relates to the funds received as part of the public offering completed in November 2005, as well as the final draw down of \$25 million on the Loulo project loan. The net cash utilized in the year ended December 31, 2006 related mainly to the repayment of \$19.2 million on the Loulo project finance loan.

Credit and Loan Facilities

On April 7, 2000, we concluded a \$90 million loan with a consortium of financial lenders led by NM Rothschild for the development of Morila. We referred to this loan as the Morila Project Loan. The loan was fully repaid in June 2004.

During the year ended December 31, 2000, Morila entered into a finance lease for five Rolls-Royce generators under the terms of a Deferred Terms Agreement between Morila and Rolls-Royce. The lease is repayable over ten years commencing April 1, 2001 and bears interest at a variable rate which at December 31, 2006 was approximately 21% per annum. Our attributable share of this finance lease obligation amounted to \$3.8 million at December 31, 2006 and \$4.8 million at December 31, 2005. We have guaranteed the repayment of the lease.

On August 28, 2002, the Syama hedge transactions were closed through a cancellation agreement with NM Rothschild. On that date, we agreed to buy gold call options to offset existing positions with NM Rothschild comprised of 148,500 ounces at \$353/ounce at a cost of \$1,805,760. In lieu of the existing premium, NM Rothschild agreed to lend us that amount on a pre-agreed payment schedule requiring us to repay the loan monthly through the 2004 fiscal year. The liability was fully paid by the end of 2004.

Morila also has a finance lease with Air Liquide relating to three oxygen generating units. The lease is payable over 10 years commencing December 1, 2000 and bears interest at a variable rate which at December 31, 2006 stood at approximately 3.48%.

Somilo SA has a \$0.6 million loan from the Government of Mali. This loan is uncollateralized and bears interest at the base rate of the Central Bank of West African States plus 2% per annum.

60

Table of Contents

The accrual of interest ceased in the last quarter of 2005 per mutual agreement between shareholders. This loan is repayable from cash flows of the Loulo mine after the repayment of all other loans.

The Loulo Project Finance Loan was arranged by NM Rothschild & Sons Limited and SG Corporate & Investment Banking, who have been joined in the facility by Absa Bank and HVB Group, and is repayable between June 2006 and September 2009.

The loan is collateralized over the assets of the Loulo Project. Additionally, we have pledged our interest in Randgold Resources (Somilo) Limited and related assets, and Randgold Resources (Somilo) Limited has pledged our interest in Somilo and related assets to secure Somilo's obligations under this loan. The loan is guaranteed by Randgold Resources Limited until economic completion of the project has been achieved, which is expected before

December 31, 2007. The loan bears interest at LIBOR plus 1.75% pre-completion of the Loulo capital program, or at any time when we continue to be a guarantor of the facility. Post completion until the fourth anniversary of signing facility documentation, the interest rate is LIBOR plus 2.10% and thereafter 2.25%. The weighted average interest rate for the year amounted to 6.83% (2005: 5.14%).

Under the term of this loan, we are required to enter into certain gold forward sales. As at December 31, 2006, 298,075 ounces of gold had been sold forward over the financial years 2007 to 2009, at an average forward price of \$436 per ounce. The facilities are margin free.

Various debt covenants apply to the loan, including:

- Limitations on material asset disposals and acquisitions;
- Restrictions with regards to the repayment of inter-company debt or dividend payments by Somilo;
- Maintain insurance with reputable insurance companies;
- Establish a Notional Debt Service Reserve Account with the minimum credit balance on all dates equal to the aggregate principal amount of and interest accruing on the loan and the aggregate amount of premium accruing in connection with the Political Risk Insurance during the six month period commencing on such date;
- Certain financial ratios need to be adhered to throughout the loan agreement.

The group is in compliance with all these requirements.

These ratios are:

- The Loan Life Ratio not to be 140% or below
- The Project Life Ratio not to be 180% or below
- The Debt Service Coverage Ratio not to be 125% or below
- Proven and Probable Reserves for the duration of the loan not to be lower than 30% of the Proven and Probable Reserves at the date the loan was entered into.

The Final Maturity Date of the Loan is September 30, 2009.

The Loan Life ratio measures the ratio, expressed as a percentage, of the present value of future net cash flows over the loan life to the aggregate principal amount of all outstanding loans at the measurement date.

The Project Life ratio measures the ratio, expressed as a percentage, of the present value of future net cash flows over the project life to the aggregate principal amount of all outstanding loans at the measurement date.

The Debt Service Coverage Ratio measures the ratio of cashflows prior to debt service, to the debt service amounts.

During May 2007, we restructured the Loulo hedge position, moving some 2007 contracts into 2010.

61

Table of Contents

As of May 31, 2007, the position was:

	Ounces Sold	Contract Price \$/Oz
2007	43,923	438
2008	80,496	429
2009	84,996	435
2010	41,748	500
Total	251,163	444

On May 1, 2007, a new \$60 million corporate facility was signed with a consortium of banks. The facility replaces the Loulo project finance loan. It bears interest at rates between LIBOR plus 1.4% and LIBOR plus 1.6%, and is secured by a pledge of Randgold Resources Limited's shares in its main operating subsidiaries.

The Euro denominated Caterpillar finance facility relates to fifteen 3512B HD generator sets and ancillary equipment purchased from JA Delmas and financed by a loan from Caterpillar Finance for Loulo. The lease is payable quarterly over 42 months commencing on August 1, 2005, and bears interest at a fixed rate of 6.03% per annum. Together with Randgold Resources (Somilo) Limited, we jointly guaranteed the repayment of this lease. The average lease payments of \$0.5 million are payable in installments over the term of the lease.

Corporate, Exploration, Development and New Business Expenditures

Our expenditures on corporate, exploration, development and new business activities for the past three years are as follows:

Area	Year Ended December 31,		
	2006	2005	2004
	(dollars in thousands)		
Rest of Africa	60	67	—
Burkina Faso	1,274	682	351
Mali	7,360	4,374	3,083
Tanzania	1,629	1,393	1,237
Côte d'Ivoire	1,289	340	351
Senegal	1,492	1,434	1,455
Ghana	855	433	588
Total exploration expenditure	13,959	8,723	7,065
Corporate expenditure	14,846	15,326	9,785
Total exploration and corporate expenditure	28,805	24,049	16,850

The main focus of exploration work is on our advanced projects in Mali West, around Morila, and in Senegal, Tanzania, Burkina Faso, Côte d'Ivoire and Ghana.

An updated prefeasibility study and an extensive drilling program has been completed for the Tongon project in Côte d'Ivoire with the final feasibility study planned to commence in 2007.

Working Capital

Management believes that our working capital resources, by way of internal sources and banking facilities, are sufficient to fund our currently foreseeable future business requirements.

C. RESEARCH AND DEVELOPMENT, PATENTS AND LICENSES, ETC.

We are not involved in any research and development and have no registered patents or licenses.

D. TREND INFORMATION

Our financial results are subject to the movement in gold prices. In the past fiscal year, the general trend has been upwards and this has had an impact on revenues. However it should be noted that fluctuations in the price of gold remain a distinct risk to us.

62

Table of Contents

Gold Market

The gold market is relatively liquid compared with many other commodity markets, with the price of gold generally quoted in US dollars. The physical demand for gold is primarily for fabrication purposes, and gold is traded on a world-wide basis. Fabricated gold has a variety of uses, including jewelry (which accounts for 85% of fabricated demand), electronics, dentistry, decorations, medals and official coins. In addition, central banks, financial institutions and private individuals buy, sell and hold gold bullion as an investment and as a store of value.

Historically, gold has been used as a store of value because it tends to retain its value in relative terms against basic goods in times of inflation and monetary crisis. Therefore, large quantities of gold in relation to annual mine production are held for this purpose. This has meant that, historically, the potential total supply of gold has been far greater than annual demand. Thus, while current supply and demand play some part in determining the price of gold, this does not occur to the same extent as for other commodities.

Instead, gold prices have been significantly affected, from time to time, by macro-economic factors such as expectations of inflation, interest rates, exchange rates, changes in reserve policy by central banks, and global or regional political and economic crises. In times of inflation and currency devaluation, gold has traditionally been seen as refuge, leading to increased purchases of gold and a support for the price of gold.

Interest rates affect the price of gold on several levels. High real interest rates increase the cost of holding gold, and discourage physical buying in developed economies. High US dollar interest rates also make hedging by forward selling attractive because of the higher contango premiums (differential between LIBOR and gold lease rates) obtained in the forward prices. Increased forward selling in turn has an impact on the spot price at the time of sale.

Changes in reserve policies of central banks have affected the gold market and gold price on two levels. On the physical level, a decision by a central bank to decrease or to increase the percentage of gold in bank reserves leads to either sales or purchases of gold, which in turn has a direct impact on the physical market for the metal. In practice, sales by central banks have often involved substantial tonnages within a short period of time and this selling can place strong downward pressure on the markets at the time they occur. As important as the physical impact to official sales, announcements of rumors of changes in central bank policies which might lead to the sale of gold reserves have, in recent years, had a powerful negative effect on market sentiment and encouraged large speculative positions against gold in the futures market for the metal.

The volatility of gold prices is illustrated in the following table, which shows the annual high, low and average of the afternoon London Bullion Market fixing price of gold in US dollars for the past ten years.

Year	Price Per Ounce (\$)		
	High	Low	Average
1996	415	367	388
1997	367	283	331
1998	313	273	294
1999	326	253	279
2000	313	264	279
2001	293	256	271
2002	349	278	310
2003	416	320	363
2004	454	375	409
2005	537	411	444
2006	725	525	604

E. OFF-BALANCE SHEET ARRANGEMENTS

None.

Table of Contents

Item 6. Directors, Senior Management and Employees

A. DIRECTORS AND SENIOR MANAGEMENT

Our Articles of Association provide that the board must consist of no less than two and no more than 20 directors at any time. During the year Mr. J.A. Cramer retired from the board. The board currently consists of 8 directors.

Our Articles of Association provide that any new director should be reelected by the shareholders at the annual general meeting following the date of the director's appointment. As a result of the appointment during the year of Mr. N.P. Cole and Dr. K. Voltaire, both non-executive directors were the subject of an ordinary resolution at the annual general meeting held on April 30, 2007, as required by our Articles of Association. Furthermore, each director is subject to reelection on a rotation basis every three years as required by our Articles of Association and the Companies (Jersey) Law, 1991. Mr. R.I. Israel and Mr. P. Liétard's positions as non-executive director and non-executive chairman, respectively, were the subject of an ordinary resolution at the annual general meeting held on May 2, 2006, as required by our Articles of Association.

According to the Articles of Association, the board meets at intervals determined by the board from time to time.

The address of each of our executive directors and non-executive directors is the address of our principal executive offices, La Motte Chambers, La Motte Street, St. Helier, Jersey, JE1 1BJ, Channel Islands.

Executive Directors

D. Mark Bristow (48) Chief Executive Officer. Dr. Bristow was appointed a director in August 1995 and Chief Executive Officer in October 1995. A geologist with more than 24 years' experience in the mining industry, he holds a Ph. D. in Geology from Natal University, South Africa. Prior to this he held executive responsibility for the exploration and new business activities of Randgold & Exploration from 1992 to 1995. During the period 1995 to 1997 he also directed the re-engineering of the reserve management functions of the gold mining of the Randgold & Exploration Group and its affiliated gold mining companies. He is currently a non-executive director of Rockwell Resources International and previously held directorships at African Platinum, Harmony Gold Mining Company Limited, DRD Gold Limited and Randgold & Exploration Company Limited.

Roger A. Williams (43) Finance Director. Mr. Williams is a chartered accountant with 19 years experience in finance including 10 years in the mining industry. Prior to joining us in January 1997, he was a financial manager for Kimberly-Clark of Southern Africa and an audit manager with Deloitte & Touche in the United Kingdom. In November 2001 he was appointed an alternate director and was appointed as Finance Director in April 2002. On May 7, 2007, Mr. Williams resigned as Finance Director with effect from July 1, 2007, but will remain a director until July 30, 2007 and an employee until August 6, 2007. Mr. Graham Shuttleworth will be replacing Mr. Williams as Finance Director.

Non-Executive Directors

Philippe Liétard (58) Non-Executive Chairman; Mr. Liétard was appointed a director in February 1998. Mr. Liétard was managing director of the Global Natural Resources Fund from 2000 to 2003. Prior to July 2000, he was director of the Oil, Gas and Mining Department of the International Finance Corporation. His experience in corporate and project finance with UBS, IFC and the World Bank extends over 30 years, most of them in the minerals business and in Africa. Mr. Liétard is now an independent consultant and a promoter of mining and energy investments. He was appointed a director in February 1998 and chairman in November 2004.

Bernard H. Asher (70) Non-Executive Director; Chairman of the audit committee and Member of the remuneration committee. From 1986 to 1998, he was an executive director of HSBC Holdings plc and chairman of HSBC Holdings' subsidiary, HSBC Investment Bank plc. He was chairman of

65

Table of Contents

Lonrho Africa plc, vice-chairman of the Court of Governors of the London School of Economics and of the Legal & General Group plc and a director of Morgan Sindall plc. He is Chairman of Lion Trust Asset Management and senior independent director of Morgan Sindall plc. He was appointed a director in June 1997 and senior independent director in October 2003.

Norborne P. Cole (65) Non-Executive Director. Mr. Cole was appointed a director in May 2006. Mr. Cole was CEO of Coca-Cola Amatil based in Sydney, Australia until 1998. Currently he is vice-chairman of Silver Eagle Distributors of Houston, Texas and a director of Lancer Corporation and Papa John's International Inc..

Robert I. Israel (57) Non-Executive Director; Chairman of the remuneration committee. Mr. Israel was appointed a director in June 1997. Mr. Israel is a partner at Compass Advisers, LLP. Until April 2000, Mr. Israel served as a managing director of Schroder & Co. Inc. and head of its Energy Department. He has 27 years of experience in corporate finance, especially in the natural resources sector.

Aubrey L. Paverd (68) Non-Executive Director; Member of the audit committee. Dr. Paverd was appointed a non-executive director in August 1995. He is also a director of the Peruvian mining company Cia. Minas Buenaventura. Dr. Paverd is now an independent consultant. He has 44 years of international geological experience.

Karl Voltaire (57) Non-Executive Director. Dr. Voltaire was appointed a director in May 2006. He holds a Ph.D in finance from the University of Chicago. He is currently the CEO of The Nelson Mandela Institute and was previously a director of the African Development Bank. Dr. Voltaire was formerly with the International Finance Corporation where he was the director in charge of Global Financial Markets.

Executive Officers

David Haddon (49) General Counsel and Secretary. Having overseen our administrative obligations from our incorporation in 1995, Mr. Haddon assumed full secretarial responsibility when we became listed on the London Stock Exchange in July 1997. He has over 22 years of legal and administrative experience. He assumed the responsibility as general counsel in January 2004. He is a director of Seven Bridges Trading 14 (Pty) Limited.

Paul Harbidge (37) Exploration Manager. Mr. Harbidge is a geologist with 14 years' experience, mainly in West Africa. He joined us in 2000 and was appointed exploration manager in 2004.

Bill Houston (59) General Manager — Human Resources. Mr. Houston joined us in 1992 as group training and development manager and currently heads the human resources function. He has 26 years of human resources experience. He is a director of Morila SA and Seven Bridges Trading 14 (Pty) Limited.

Amadou Konta (49) General Manager — Loulo. Mr. Konta has a degree in civil engineering as well as several management and project management qualifications. He was appointed mine foreman and superintendent at Syama mine and served as mine manager from 1997. In 2001 he was promoted as our construction manager in Mali and was

appointed Loulo general manager on October 1, 2004.

Victor Matfield (42) Manager — Corporate Finance. Mr. Matfield is a chartered accountant with 13 years' experience in the mining industry. He was appointed corporate finance manager in August 2001, prior to that he served as financial manager of the Syama mine and of the Morila capital project. He is a director of Seven Bridges Trading 14 (Pty) Limited.

Chris Prinsloo (56) Group Commercial and Financial Manager. Mr. Prinsloo became Group Financial Manager in January 2002. He has 34 years of experience in the mining industry. He is a director of Somilo SA and Morila SA.

Adrian J. Reynolds (52) General Manager — Exploration and Evaluation. Mr. Reynolds has 26 years' experience in the exploration and mining industries and was part of the team that developed our original strategy. He leads the exploration team and manages the evaluation of early stage and

66

Table of Contents

development projects. He is responsible for the Morila technical oversight and for compilation of our technical audits, due diligences and feasibility studies. He is a director of Morila Limited and Somilo SA.

Mahamadou Samake (59) General Manager — Randgold Resources Mali. Mr. Samake is the general manager of the Bamako office and is a director of our Malian subsidiaries. He was a professor of company law at the University of Mali.

John Steele (46) General Manager — Capital Projects. Mr. Steele has overseen the capital expansion program at the Syama mine, and at the beginning of July 1998, assumed the position of general manager capital projects for the Randgold Resources Group, overseeing the construction of Morila. He is a director of Somilo SA and Morila Limited and is currently leading the Loulo construction project.

Our Articles of Association provide that the longest serving one-third of directors retire from office at each annual general meeting. Retiring directors normally make themselves available for re-election and are re-elected at the annual general meeting on which they retire. Our officers who are also directors retire as directors in terms of the Articles of Association, but their service as officers is regulated by standard industry employment agreements.

The date of appointment, date of expiration and length of service for each of our directors is set forth in the table below:

Director	Date of Appointment	Date of Expiration of Term	Number of Years Served
Executive			
D.M. Bristow	8/11/95	5/31/08	11
R.A. Williams*	5/01/02	5/31/08	5
Non-Executive			
B.H. Asher	6/12/97	5/05/09	9

R.I. Israel	6/12/97	5/05/10	9
P. Liétard	2/11/98	5/05/10	8
A. L. Paverd	7/29/95	5/05/09	11
N.P. Cole	5/03/06	5/05/10	1
K. Voltaire	5/13/06	5/05/10	1

*Mr. R.A. Williams has resigned as financial director with effect from July 1, 2007, and as a director with effect from July 30, 2007.

None of our directors and executive officers was selected under any arrangements or understandings between that director or executive officer and any other person. All of our non-Executive directors are considered independent directors.

B. COMPENSATION

Our objective is to provide senior management, including executive directors, with a competitive remuneration package which will attract and retain executives of the highest caliber and will encourage and reward superior performance in the manner consistent with the interests of our shareholders. The remuneration committee's policies are designed to meet these objectives and to ensure that the individual directors are fairly and responsibly rewarded for their respective contributions to our performance.

We have no liability in respect of retirement provisions for executive directors. We do, however, provide a vehicle in the form of a defined contribution fund into which employees, including executive directors, may contribute for the purpose of providing for retirement. While we make an annual contribution on behalf of our employees, we do not do so on behalf of our executive directors.

Each executive director receives a basic salary. Executive directors do not receive any fees. Executive directors are paid an annual bonus which is determined by the annual performance of our share price.

67

Table of Contents

Fees paid to non-executive directors are:

- A general retainer to all non-executive directors of \$45,000;
- An annual committee assignment fee of \$25,000, with an additional premium for membership of the audit committee of \$10,000;
- The chairman of a board committee to receive a committee assignment fee of \$40,000;
- The senior independent director, in addition to the general annual retainer but in lieu of any committee assignment fee, to receive an additional \$75,000;
- The non-executive chairman, in addition to the general annual retainer but in lieu of any committee assignment fee, to receive an additional \$90,000;
- An award to each director of \$30,000 to be translated into a number of "restricted" shares. The shares are to vest over a three year period from the date of each award, being January 1. Vesting would accelerate on the following conditions:
 - o Termination other than resignation or dismissal;
 - o Voluntary retirement after the age of 65 with a minimum of three years service as a director; and
 - o Change in control of the company.

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

A director must hold shares at least equal in value (as at the beginning of the year) to the general annual retainer. A director would be granted three years in which to acquire the required shareholding and this period could be extended by the unanimous approval of the uninterested directors. If the number of shares were to fall below the threshold due to a fall in the share price, no additional purchase of shares would be required. Currently, other than the two new directors, Mr. N.P. Cole and Dr. K. Voltaire who were appointed in May 2006, all the directors hold shares equal to the value of the general annual retainer.

Non-executive directors have been granted options to purchase our ordinary shares. Details of the options still held by the non-executive directors and those exercised since January 1, 2006 are shown below.

On May 11, 2005 the first \$30,000 award was allocated to each of the non-executive directors for the purpose of acquiring restricted stock. The price of the restricted stock calculation was the Nasdaq National Market closing price on May 10, 2005, being \$12.78. In terms of the policy, 783 shares were issued directly to each non-executive director and 1,565 shares were held as restricted stock. Non-executive directors were issued the second tranche of 782 ordinary shares on February 13, 2006 and, subject to agreed conditions, the final balance was issued January 3, 2007.

On February 13, 2006 the second \$30,000 award was allocated to each of the non-executive directors for the purpose of acquiring restricted stock. The price of the restricted stock calculation was the Nasdaq National Market closing price on February 10, 2006, or \$17.11. In terms of the policy, 584 shares were issued directly to each non-executive director and 1,169 shares were held as restricted stock. Non-executive directors were issued the second tranche of 584 ordinary shares on January 3, 2007 and the balance will be issued on January 1, 2008 subject to agreed conditions.

On January 3, 2007 the third \$30,000 award was allocated to each of the non-executive directors for the purpose of acquiring restricted stock. The price of the restricted stock calculation was the Nasdaq Global Select Market closing price on January 3, 2007, or \$22.37. In terms of the policy 447 shares were issued directly to each non-executive director and 894 shares were held as restricted stock. Non-executive directors will be issued the second and third tranches on January 1, 2008 and January 1, 2009, respectively.

During the year ended December 31, 2006, the aggregate compensation paid or payable to our directors and executive officers as a group was approximately \$6.3 million, of which \$4.1 million was payable to directors and recognized as a remuneration expense.

68

K. Voltaire ⁽³⁾	47,500	—	—	—	—	—	47,000	—
J-A. Cramer ⁽⁴⁾	80,000	80,000	—	—	30,000	30,000	110,000	—
SubTotal	590,000	500,000	—	—	150,000	150,000	740,000	650,000
TOTAL	1,510,000	1,378,208	2,829,363	2,275,317	843,700	843,700	5,183,063	4,497,225

(1) Other payments comprise the grant of restricted shares to Dr. D.M. Bristow.

(2) Mr. R.A.R. Kebble resigned from the board effective November 3, 2004. All amounts shown as remuneration for 2005 reflect payments in settlement of Mr. R.A.R. Kebble's termination agreement.

(3) Mr. N.P. Cole and Dr. K. Voltaire were appointed to the board effective May 3, 2006 and May 13, 2006, respectively.

(4) Mr. J-A. Cramer retired from the board effective November 3, 2006.

The executive directors do not receive any benefits in kind and the only long-term incentive scheme is the Share Option Scheme.

The bonus is calculated on the movement in our share price based on a calendar year to March 31. The 2006 bonuses, as shown above, reflect the amounts paid in April 2006 with respect to the movement in the share price from April 1, 2005 to March 31, 2006, being \$12.36 to \$18.17. At December 31, 2006, we accrued \$1.8 million for bonus payments with respect to 2006, based on a share price of \$23.46. Based on a share price of \$23.91 on March 30, 2007, the aggregate amount of the bonuses payable for the period up to that date would be \$2.5 million. Bonuses with respect to the 2006 year were paid in April 2007 in terms of the provisions of the service contracts.

Share options exercised by the directors during 2006 and up to April 30, 2007 are detailed below:

Name	Number of Options Exercised	Average Exercise Price (\$)	Average Market price at date of exercise (\$)
R.A. Williams	41,667	8.05	22.00
D.M. Bristow	166,700	3.25	17.50
J-A. Cramer	25,400	1.65	22.50

The high and low share prices for our ordinary shares for the year on the London Stock Exchange were (pounds sterling) 14.08 and (pounds sterling) 8.70, respectively, and our high and low price for our ADSs on the Nasdaq Global Select Market were \$26.32 and \$15.88, respectively. The ordinary share price on the London Stock Exchange and the price of an ADS on the Nasdaq Global Select Market at December 29, 2006, the last day of trading, were (pounds sterling) £11.95 and \$23.46, respectively.

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Share options outstanding at April 30, 2007 and held by directors and executive officers were as follows:

	Options to Purchase Ordinary Shares	Expiration Date	Exercise Prices (\$)
Executive Directors			
R.A. Williams	83,000	8/05/14	8.05

	75,000	8/05/14	8.05
M. Samake	50,000	8/05/14	8.05
J. Steele	57,000	8/05/14	8.05

C. BOARD PRACTICES

Directors' Terms of Employment

Service contracts have been concluded with the two executive directors. Mr. R.A. Williams' current agreement runs until December 31, 2008. Given our size and management team, the board considers periods of employment in excess of one year appropriate. On May 7, 2007, Mr. Williams resigned as Finance Director with effect from July 1, 2007, but will remain a director until July 30, 2007 and an employee until August 6, 2007. Mr. Graham Shuttleworth will be replacing him as Finance Director. Three months notice was given by Mr. Williams in terms of his contract and no additional compensation due to resigning from office is payable to him. The board has agreed to a rolling three year contract for Dr. D.M. Bristow and this has been approved based on the importance attributed to his contribution to our overall strategic direction and performance. In the event of unilateral termination, we would be required to compensate the director concerned for any outstanding amounts due in terms of the contract.

In terms of the new service contract entered into with Dr. D.M. Bristow, the board on the recommendation of the remuneration committee on May 11, 2005 awarded the CEO restricted stock amounting to 150,000 shares. The award was subject to agreed performance criteria set for the 2004 financial year. Since Dr. D.M. Bristow has met these criteria, all the shares have been issued in his name.

On August 16, 2004, the board approved a resolution awarding Mr. R.A. Williams 125,000 share options in accordance with the rules of the current share option scheme. The options were awarded at a price of \$8.05, being the trading price of the company on August 5, 2004. Mr. R.A. Williams was entitled to exercise the options in three annual tranches commencing August 6, 2006. Due to his resignation, he will forfeit the tranche that vests in 2008.

We currently do not have service agreements with our non-executive directors. However, each director is subject to reelection by our shareholders in accordance with our Articles of Association.

Board of Directors Committees

In order to ensure good corporate governance, the board has formed an audit committee, a remuneration committee and a governance and nomination committee. The audit, remuneration, and governance and nomination committees are comprised of a majority of non-executive directors.

70

Table of Contents

Audit Committee

Our audit committee charter, which defines the terms of reference for the audit committee members, sets out the framework through which the audit committee reviews our annual results, the effectiveness of our systems of internal control, internal audit procedures and legal and regulatory compliance and the cost effectiveness of the services provided by the external auditors. The audit committee also reviews the scope of work carried out by our external auditors and holds discussions with the external auditors at least once a year. The audit committee is comprised of three independent non-executive directors. The members of the audit committee are Messrs. B.H. Asher (Chairman), Dr. Voltaire and Dr. Paverd.

Remuneration Committee

The remuneration committee reviews the remuneration of directors and senior management and determines the structure and content of the senior executives' remuneration packages by reference to a number of factors including current business practice and our prevailing business conditions and the mining and exploration industry. The members of the remuneration committee are Messrs. R.I. Israel (Chairman), N.P. Cole and B.H. Asher.

Governance and Nomination Committee

The governance and nomination committee reviews our corporate governance and sets out the framework in which such policies are established to guide our operations and activities. In addition, the committee at the instance of the board interviews and recruits any future board members. The members of the governance and nomination committee are Messrs. P. Liétard (chairman), B.H. Asher and N.P. Cole.

D. EMPLOYEES

At the end of each of the past three years, the breakdown of employees, including our subsidiaries but excluding Morila SA, by main categories of activity was as follows:

Category of Activity	December 31, 2006	December 31, 2005	December 31, 2004
Mining and related engineering ⁽¹⁾	30	52	9
Processing and related engineering ⁽²⁾	136	76	8
Management and technical ⁽³⁾	48	46	12
Exploration ⁽⁴⁾	90	47	53
Administration ⁽⁵⁾	47	50	28
TOTAL	351	271	110

Notes: In addition to the permanent employees shown above, the following fixed-term, temporary and contractor employees were employed at Loulo:

71

Table of Contents

- (1) The open-pit mining contractor employed 344 permanent and 53 temporary employees, the underground development contractor employed 49 employees, the tailing storage facility contractors employed 45 employees, all other third party contractor employed a total of 74 employees, and Loulo employed 94 temporary employees, as at December 31, 2006. The permanent workforce was reduced as the much of the heavy vehicle fleet and maintenance crew moved to work for contractors.
 - (2) 250 people were employed on capital work as at December 31, 2006. In addition, third party contractors employed a total of 125 employees.
 - (3) The few additional technical staff were required to manage the underground project.
 - (4) Exploration and grade control efforts were once more expanded during 2006, with the biggest increases coming in Western Mali and Burkina Faso. In addition to the 90 permanent staff referred to in the table above a further 66 fixed-term and temporary employees were employed at December 2006.
- (5) In addition to the number of administrative employees reflected in the table above, third party contractors employed 180 people.

E. SHARE OWNERSHIP

See “Item 7 — Major Shareholders and Related Party Transactions”.

Employee Share Option Scheme

Since 1996, we have operated a share option scheme under which senior management, including executive and non-executive directors, may be offered options to purchase our ordinary shares. The aggregate number of shares available for issuance under the option scheme may not exceed 15% of our issued share capital. Awards to executive directors are determined by the remuneration committee and are designed to motivate directors to achieve our strategic objectives. Share options are not subject to any performance criteria for individual directors. Any options provided to an individual employee (which includes executive and non-executive directors) as defined by the rules of the scheme, are subject to an upper limit of 2% of our issued ordinary share capital.

The exercise price of any new share options is determined as the closing price of the share on the trading day preceding that on which the person was granted the option. Under the rules of the share option scheme, all option holders, inclusive of executive and non-executive directors, were granted additional options to subscribe for shares in the open offer which was concluded in November 1998. These additional options are exercisable at the open offer price and otherwise on the same terms as the initial grant. The number of additional options to be granted to each option holder was calculated by dividing the number of open offer shares taken up by the issued share capital multiplied by the number of options held shares reflected are still options prior to the open offer.

The scheme provides for the early exercise of all options in the event of an acquisition of a number of shares that would require an offer to be made to all of our other shareholders.

Item 7. Major Shareholders and Related Party Transactions

A. MAJOR SHAREHOLDERS

As of April 30, 2007, our issued share capital consisted of 68,852,867 ordinary shares with a par value of \$0.05 per share. To our knowledge we are not, directly or indirectly, owned or controlled by another corporation, any foreign government or other person.

The following table sets forth information regarding the beneficial ownership of our ordinary shares as of April 30, 2007, by:

- Any person of whom the directors are aware that is interested directly or indirectly in 3% or more of our ordinary shares;

72

Table of Contents

- Each of our directors; and
- All of our executive officers and directors as a group.

Beneficial ownership is determined in accordance with the rules of the Securities and Exchange Commission and generally includes voting or investment power with respect to securities. Ordinary shares issuable pursuant to options, to the extent the options are currently exercisable or convertible within 60 days of April 30, 2007, are treated as outstanding for computing the percentage of the person holding these securities but are not treated as outstanding for computing the percentage of any other person. Unless otherwise noted, each person or group identified possesses sole voting and investment power with respect to the shares, subject to community property laws where applicable. Unless indicated otherwise, the business address of the beneficial owners is: Randgold Resources Limited, La Motte Chambers, La Motte Street, St Helier, Jersey, JE1 1BJ, Channel Islands.

Holder	Shares Beneficially Owned	
	Number	%
D.M. Bristow	732,584	1.07
R.A. Williams	170,000	0.23
B.H. Asher	45,783	0.06
N.P. Cole	447	0.00
R.I. Israel	41,828	0.06
P. Liétard	29,362	0.04
A.L. Paverd	41,828	0.06
K. Voltaire	447	0.00
BNY (Nominees) Limited ⁽¹⁾ 30 Cannon Street London EC4M XH	56,723,230	82.38
Wells Fargo & Company ⁽²⁾ 420 Montgomery Street San Francisco, CA 94104	5,968,261	8.69
Directors and executive officers ⁽³⁾	1,240,231	1.80

(1) Shares held by BNY (Nominees) Ltd are held for and on behalf of our ADS holders.

(2) Wells Fargo & Company reported in its Schedule 13G filed with the Securities and Exchange Commission that as at December 31, 2006 its beneficial ownership in us amounted to 5,968,261

ordinary shares (8.69%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited.

- (3) No executive officer beneficially owns in excess of 1% of the outstanding ordinary shares, save for Dr. D.M. Bristow who owns 1.07%.

To the knowledge of management, none of the above shareholders hold voting rights which are different from those held by our other shareholders.

As of April 30, 2007, there were 4 record holders of our ordinary shares in the United States, holding an aggregate of 52,829 ordinary shares or 0.08%.

As of May 21, 2007, there were 5 record holders of our ADSs in the United States, holding an aggregate of 56,847,530 ADSs or 82.56%.

B. RELATED PARTY TRANSACTIONS

None of our directors, officers or major shareholders or, to our knowledge, their families, had any interest, direct or indirect, in any transaction during the last fiscal year or in any proposed transaction which has affected or will materially affect us or our investment interests or subsidiaries, other than as stated below.

73

Table of Contents

The Randgold Name

Under an agreement dated June 26, 1997, Randgold & Exploration Group has licensed us to carry on business under the name "Randgold". The license has been provided to us on a royalty free perpetual basis. The UK Trademark Registry granted a registration certificate to us for "Randgold" on February 16, 2001.

Item 9. The Offer and Listing

A. OFFER AND LISTING DETAILS

The following table sets forth, for the periods indicated, the high and low sales prices of our ordinary shares, as reported by the London Stock Exchange, and of our ADSs, as reported by the Nasdaq Global Select Market. Effective

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

March 10, 2003, we changed the ratio of ordinary shares to ADSs from two ordinary shares per ADS to one ordinary share per ADS, so that each ADS now represents one ordinary share. In March, 2003 we changed the currency in which the price of our ordinary shares that are traded on the London Stock Exchange are quoted. The ordinary shares are now quoted in pound sterling and not in US dollars. The ADSs continue to be quoted on the London Stock Exchange and the Nasdaq Global Select Market in US dollars.

Financial Period Ended	Price Per Ordinary Share		Price Per ADS	
	High (£)	Low (£)	High (\$)	Low (\$)
December 31, 2006	14.08	9.09	26.32	15.88

B. MEMORANDUM AND ARTICLES OF ASSOCIATION

General

We are a company organized with limited liability under the laws of Jersey, Channel Islands. Our registered number is 62686.

The authorized share capital is \$4,000,000 divided into 80,000,000 ordinary shares of \$0.05 each, of which 68,852,867 were issued as of March 31, 2007 and 11,147,133 were available for issue. At the annual general meeting held on April 26, 2004, shareholders approved a resolution which authorized a share split which amended our authorized share capital from \$4,000,000 divided into 40,000,000 ordinary shares of \$0.10 each to \$4,000,000 divided into 80,000,000 ordinary shares of \$0.05 each. The issued share capital therefore increased from 29,263,385 to 58,526,770 ordinary shares with effect from June 11, 2004. None of our shares have any redemption rights.

Memorandum of Association

Clause 2 of our Memorandum of Association provides that we shall have all the powers of a natural person including but not limited to the power to carry on mining, exploration or prospecting.

Changes in Capital or Objects and Powers

Subject to the 1991 Law and our Articles of Association, we may by special resolution at a general meeting:

- increase our authorized or paid up share capital;
- consolidate and divide all or any part of our shares into shares of a larger amount;
- sub-divide all or any part of our shares having a par value;
- convert any of our issued or unissued shares into shares of another class;

Table of Contents

- convert any of our paid-up shares into stock, and reconvert any stock into any number of paid-up shares of any denomination;
- convert any of our issued shares into redeemable shares which can be redeemed;
- cancel shares which, at the date of passing of the resolution, have not been taken or agreed to be taken by any person, and diminish the amount of the authorized share capital by the amount of the shares so cancelled;
- reduce the authorized share capital;
- reduce our issued share capital; or
- alter our Memorandum or Articles of Association.

Articles of Association

We adopted our Articles of Association by special resolution passed on June 24, 1997. Our Articles of Association include provisions to the following effect:

General Meeting of Shareholders

We may at any time convene general meetings of shareholders. We hold an annual general meeting for each fiscal year within nine months of the end of each fiscal year. No more than eighteen months may elapse between the date of one annual general meeting and the next.

Annual general meetings and meetings calling for the passing of a special resolution require twenty-one days' notice of the place, day and time of the meeting in writing to our shareholders. Any other general meeting requires no less than fourteen days' notice in writing. Our business may be transacted at a general meeting only when a quorum of shareholders is present. Two persons entitled to attend and to vote on the business to be transacted, each being a member or a proxy for a member or a duly authorized representative of a corporation which is a member, constitute a quorum. Nasdaq's marketplace rules, which apply to all companies listed on the Nasdaq Global Select Market, state in Rule 4350(f) that the minimum quorum for any meeting of holders of a company's common stock is 33 1/3% of the outstanding shares. As a result, we requested, and Nasdaq granted to us, an exemption from compliance with the Rule 4350(f) requirement.

The annual general meetings deal with and dispose of all matters prescribed by our Articles of Association and by the 1991 Law including:

- the consideration of our annual financial statements and report of our independent accountants;
- the election of directors; and
- the appointment of independent auditors.

Voting Rights

Subject to any special terms as to voting on which any shares may have been issued or may from time to time be held, at a general meeting, every shareholder who is present in person (including any corporation present by its duly authorized representative) shall on a show of hands have one vote and every shareholder present in person or by proxy shall on a poll have one vote for each share of which he is a holder. In the case of joint holders, the vote of the senior who tenders a vote, whether in person or by proxy, shall be accepted to the exclusion of the votes of the other joint holders.

Unless we otherwise determine, no shareholder is entitled to vote at a general meeting or at a separate meeting of the holders of any class of shares, either in person or by proxy, or to exercise any other right or privilege as a shareholder in respect of any share held by him unless all calls presently payable by him in respect of that share, whether alone or jointly with any other person, together with interest and expenses, if any, have been paid to us.

77

Table of Contents

Dividends

Subject to the provisions of the 1991 Law and of the Articles of Association, we may, by ordinary resolution, declare dividends to be paid to shareholders according to their respective rights and interests in our profits. However, no dividend shall exceed the amount recommended by us. Subject to the provisions of the 1991 Law, we may declare and pay an interim dividend, including a dividend payable at a fixed rate, if an interim dividend appears to us to be justified by our profits available for distribution.

Except as otherwise provided by the rights attached to any shares, all dividends shall be declared and paid according to the amounts paid up, otherwise than in advance of calls, on the shares on which the dividend is paid. All dividends unclaimed for a period of 12 years after having been declared or become due for payment shall, if we so resolve, be forfeited and shall cease to remain owing by us.

We may, with the authority of an ordinary resolution, direct that payment of any dividend declared may be satisfied wholly or partly by the distribution of assets, and in particular of paid up shares or debentures of any other company, or in any one or more of those ways.

We may also with the prior authority of an ordinary resolution, and subject to such conditions as we may determine, offer to holders of shares the right to elect to receive shares, credited as fully paid, instead of the whole, or some part, to be determined by us, of any dividend specified by the ordinary resolution.

Ownership Limitations

Our Articles of Association and the 1991 Law do not contain limits on the number of shares that a shareholder may own.

Distribution of Assets on a Winding-Up

If we are wound up, the liquidator may, with the sanction of a special resolution and any other sanction required by law, divide among the shareholders in specie the whole or any part of our assets and may, for that purpose, value any assets and determine how the dividend shall be carried out as between the shareholders or vest the whole or any part of the assets in trustees on such trusts for the benefit of the shareholders as he with the like sanction shall determine but no shareholder shall be compelled to accept any assets on which there is a liability.

Transfer of Shares

Every shareholder may transfer all or any of his shares by instrument of transfer in writing in any usual form or in any form approved by us. The instrument must be executed by or on behalf of the transferor and, in the case of a transfer of a share which is not fully paid up, by or on behalf of the transferee. The transferor is deemed to remain the holder

until the transferee's name is entered in the register of shareholders.

We may, in our absolute discretion and without giving any reason, refuse to register any transfer of a share or renunciation of a renounceable letter of allotment unless:

- it is in respect of a share which is fully paid up;
- it is in respect of only one class of shares;
- it is in favor of a single transferee or not more than four joint transferees;
- it is duly stamped, if so required; and
- it is delivered for registration to our registered office for the time being or another place that we may from time to time determine accompanied by the certificate for the shares to which it relates and any other evidence as we may reasonably require to prove the title of the transferor or person renouncing and the due execution of the transfer or renunciation by him or, if the transfer or renunciation is executed by some other person on his behalf, the authority of that person to do so; provided that we shall not refuse to register any transfer of partly paid shares which are listed on the grounds they are partly paid shares in circumstances where our refusal would prevent dealings in those shares from taking place on an open and proper basis.

78

Table of Contents

Variation of Rights

If at any time our share capital is divided into shares of different classes, any of the rights for the time being attached to any share or class of shares may be varied or abrogated in the manner, if any, that is provided by the rights or, in the absence of any such provision, either with the consent in writing of the holders of not less than three-quarters in nominal value of the issued shares of the class or with the sanction of a resolution passed by the holders of not less than three-quarters in nominal value of the issued shares of that class at a separate general meeting of the holders of shares of the class. The quorum at that meeting shall be not less than two persons holding or representing by proxy at least one-third of the nominal amount paid up on the issued shares of the class in question and at an adjourned meeting not less than one person holding shares of the class in question or his proxy.

Subject to the terms of issue of or rights attached to any shares, the rights or privileges attached to any class of shares shall be deemed not to be varied or abrogated by the creation or issue of any new shares ranking equally in all respects, except as to the date from which those new shares shall rank for dividend, with or subsequent to those already issued or by the reduction of the capital paid up on those shares or by the purchase or redemption by us of our own shares in accordance with the provisions of the 1991 Law and the Articles.

Capital Calls

Subject to the terms of allotment of shares, we may from time to time make calls on the members in respect of any monies unpaid on the shares, whether in respect of nominal value or premium, and not payable on a fixed date. A member must receive fourteen days' notice of any call and any call is deemed to be made when the resolution of the board authorizing such call was passed.

If any call is not paid on or before the date appointed for payment, the person liable to pay that call shall pay all costs, charges and expenses of ours in connection with the non-payment, including interest on the unpaid amount, if

requested by us.

Unless we otherwise determine, no member shall be entitled to receive any dividend or to be present and vote at any general meeting, or be included in a quorum, or to exercise any other right or privilege as a shareholder unless and until any outstanding calls in respect of his shares are paid.

Borrowing Powers

We may exercise all of our powers to borrow money and to mortgage or charge all or any part of our undertaking, property and assets, present and future, and uncalled capital and, subject to the provisions of the 1991 Law, to create and issue debenture and other loan stock and other securities, whether outright or as collateral security for any debt, liability or obligation of ours or of any third party.

Issue of Shares and Preemptive Rights

Subject to the provisions of the 1991 Law and to any special rights attached to any shares, we may allot or issue shares with those preferred, deferred or other special rights or restrictions regarding dividends, voting, transfer, return of capital or other matters as we may from time to time determine by ordinary resolution, or if no ordinary resolution has been passed or an ordinary resolution does not make specific provision, as we may determine. We may issue shares that are redeemable or are liable to be redeemed at our option or the option of the holder in accordance with our Articles of Association. Subject to the provisions of the 1991 Law the unissued shares at the date of adoption of the Articles of Association and shares created thereafter shall be at our disposal. We cannot issue shares at a discount.

There are no pre-emptive rights for the transfer of our shares either within the 1991 Law or our Articles of Association.

Meetings of the Board of Directors

Any director may, and the secretary at the request of a director shall, call a board meeting at any time on reasonable notice. A director may waive this notice requirement.

79

Table of Contents

Subject to our Articles of Association our board of directors may meet for the conducting of business, adjourn and otherwise regulate its proceedings as it sees fit. The quorum necessary for the transaction of business may be determined by the board of directors and unless otherwise determined shall be two persons, each being a director or an alternate director. A duly convened meeting of the board of directors at which a quorum is present is necessary to exercise all or any of the board's authorities, powers and discretions.

Our board of directors may delegate or entrust to and confer on any director holding an executive office any of its powers, authorities and discretions for such time, on such terms and subject to such conditions as it sees fit. Our board of directors may also delegate any of its powers, authorities and discretions for such time and on such terms and subject to such conditions as it sees fit to any committee consisting of one or more directors and one or more other persons, provided that a majority of the members of the committee should be directors.

Remuneration of Directors

Our directors (other than alternate directors) shall be entitled to receive by way of fees for their services as directors any sum that we may from time to time determine, not exceeding in aggregate \$300,000 per annum or any other sum as we, by ordinary resolution in a general meeting, shall from time to time determine. That sum, unless otherwise directed by ordinary resolution of us by which it is voted, shall be divided among the directors in the proportions and in the manner that the board determines or, if the board has not made a determination, equally. The directors are entitled to be repaid all traveling, hotel and other expenses properly incurred by them in or about the performance of their duties as directors.

The salary or remuneration of any director appointed to hold any employment or executive office may be either a fixed sum of money, or may altogether or in part be governed by business done or profits made or otherwise determined by us, and may be in addition to or in lieu of any fee payable to him for his services as director.

Pensions and Gratuities for Directors

We may exercise all of our powers to provide and maintain pensions, other retirement or superannuation benefits, death or disability benefits or other allowances or gratuities for persons who are or were directors of any company in our group and their relatives or dependants.

Directors' Interests in Contracts

Subject to the provisions of the 1991 Law and provided that his interest is disclosed as soon as practicable after a director becomes aware of the circumstances which gave rise to his duty to disclose in accordance with the Articles of Association, a director, notwithstanding his office, may enter into or otherwise be interested in any contract, arrangement, transaction or proposal with us, or in which we are otherwise interested, may hold any other office or place of profit under us (except that of auditor of, or of a subsidiary of ours) in conjunction with the office of director and may act by himself or through his firm in a professional capacity for us, and in any such case on such terms as to remuneration and otherwise as we may arrange, and may be a director or other officer of, or employed by, or a party to any transaction or arrangement with, or otherwise interested in, any company promoted by us or in which we are otherwise interested and shall not be liable to account to us for any profit, remuneration or other benefit realized by any such office, employment, contract, arrangement, transaction or proposal.

No such contract, arrangement, transaction or proposal shall be avoided on the grounds of any such interest or benefit.

Restrictions on Directors' Voting

Except as provided in our Articles of Association, a director shall not vote on, or be counted in the quorum in relation to, any resolution of the board or of a committee of the board concerning any

80

Table of Contents

contract, arrangement, transaction or any other proposal whatsoever to which we are or will be a party and in which he has an interest which (together with an interest of any person connected with him) is to his knowledge a material interest otherwise than by virtue of his interests in shares or debentures or other securities of or otherwise in or through us, unless the resolution concerns any of the following matters:

-

the giving of any guarantee, security, or indemnity in respect of money lent or obligations incurred by him or any other person at the request of or for the benefit of us or any of our subsidiary undertakings;

- the giving of any guarantee, security or indemnity in respect of a debt or obligation of ours or any of our subsidiary undertakings for which he himself has assumed responsibility in whole or in part under a guarantee or indemnity or by the giving of security;
- any proposal concerning an offer of shares or debentures or other securities of or by us or any of our subsidiary undertakings in which offer he is or may be entitled to participate as a holder of securities or in the underwriting or sub-underwriting of which he is to participate;
- any proposal concerning any other body corporate in which he (together with persons connected with him) does not to his knowledge have an interest in 1% or more of the issued equity share capital of any class of that body corporate or of the voting rights available to shareholders of that body corporate;
- any proposal relating to an arrangement for the benefit of our employees or the employees of any of our subsidiary undertakings which does not award him any privilege or benefit not generally awarded to the employees to whom the arrangement relates; or
- any proposal concerning insurance which we propose to maintain or purchase for the benefit of directors or for the benefit of persons who include directors.

A director shall not vote or be counted in the quorum for any resolution of the board or committee of the board concerning his own appointment (including fixing or varying the terms of his appointment or termination) as the holder of any office or place of profit with us or any company in which we are interested.

Number of Directors

Unless and until otherwise determined by a special resolution, the number of directors shall be not less than two or more than 20.

Directors' Appointment and Retirement by Rotation

Directors may be appointed by ordinary shareholder resolution or by the board. If appointed by ordinary resolution, a director holds office only until the next annual general meeting and shall not be taken into account in determining the number of directors who are to retire by rotation. A director shall not be required to hold any of our shares.

At each annual general meeting, one-third of the directors who are subject to retirement by rotation will retire by rotation and be eligible for re-election. Subject to the provisions of the 1991 Law and to the Articles, the directors to retire will, first, be any director who wishes to retire and not offer himself for re-election and secondly, will be those who have been longest in office since their last appointment or re-appointment, but as between those who have been in office an equal length of time, those to retire shall (unless they otherwise agree) be determined by lot. There is no age limit imposed upon directors.

Untraced Shareholders

Subject to the Articles, we may sell any of our shares registered in the name of a shareholder remaining untraced for 12 years who fails to communicate with us following advertisement of an intention to make such a disposal. Until we can account to the shareholder, the net proceeds of sale will be available for use in our business or for investment, in either case at our discretion. The proceeds will not carry interest.

Table of Contents

Crest

The Companies (Amendment No. 4) (Jersey) Law 1998 and the Companies (Uncertificated Securities) (Jersey) Order 1999 allow the holding and transfer of shares under CREST, the electronic system for settlement of securities in the United Kingdom. Our Articles of Association already provide for our shares to be held in uncertificated form under the CREST system.

Purchase of Shares

Subject to the provisions of the 1991 Law, we may purchase any of our own shares of any class. The 1991 Law provides that we may, by special resolution approve the acquisition of our own shares provided that the source of funds used to finance any repurchase is in accordance with the 1991 Law. The 1991 Law limits the type of funds available to govern the repurchase of the nominal value and the share premium attributed to any share.

Non-Jersey Shareholders

There are no limitations imposed by Jersey law or by our Articles of Association on the rights of non-Jersey shareholders to hold or vote on our ordinary shares or securities convertible into our ordinary shares.

Rights of Minority Shareholders and Fiduciary Duties

Majority shareholders of Jersey companies have no fiduciary obligations under Jersey law to minority shareholders. However, under the 1991 Law, a shareholder may, under some circumstances, seek relief from the court if he has been unfairly prejudiced by us. The provisions of the 1991 Law are designed to provide relief from oppressed shareholders without necessarily overriding the majority's decision. There may also be common law personal actions available to our shareholders.

Jersey Law and Our Memorandum and Articles of Association

The content of our Memorandum and Articles of Association is largely derived from an established body of corporate law and therefore they mirror the 1991 Law. Jersey company law draws very heavily from company law in England and there are various similarities between the 1991 Law and the English Companies Act 1985 (as amended). However, the 1991 Law is considerably shorter in content than the English Companies Act 1985 and there are some notable differences between English and Jersey company law. There are, for example, no provisions under Jersey law (as there are under English law):

- controlling possible conflicts of interests between us and our directors, such as loans by us or directors, and contracts between us and our directors other than a duty on directors to disclose an interest in any transaction to be entered into by us or any of our subsidiaries which to a material extent conflicts with our interest;
- specifically requiring particulars to be shown in our accounts of the amount of loans to officers or directors' emoluments and pensions, although these would probably be required to be shown in our accounts in conformity to the requirement that accounts must be prepared in accordance with generally accepted accounting principles;
- requiring us to file details of charges other than charges of Jersey realty; or
- as regards statutory preemption provisions in relation to further issues of shares.

Under Article 143 of the 1991 Law, the court may make an order giving relief, including regulation of our affairs requiring us to refrain from doing or continuing to do an act complained of, authorizing civil proceedings and providing for the purchase of shares by any of our other shareholders.

The court has wide powers within its inherent jurisdiction and a shareholder could successfully bring an action in a variety of circumstances. Although there is no statutory definition of unfairly prejudicial conduct, authority suggests that it includes oppression and discrimination and that the test is objective.

82

Table of Contents

There are no provisions in our Memorandum or Articles of Association concerning changes of capital where these provisions would be considered more restrictive than that required by the 1991 Law.

C. MATERIAL CONTRACTS

1. Fifth Contract of Employment, dated January 31, 2005, between Randgold Resources Limited and Dennis Mark Bristow.

We entered into a fifth contract of employment with Dennis Mark Bristow, our Chief Executive Officer.

2. Third Contract of Employment, dated April 20, 2006, between Randgold Resources Limited and Roger A. Williams.

We entered into a third contract of employment with Roger A. Williams, our Finance Director.

3. International Swap Dealers Association Inc. Master Agreement and Schedule thereto, dated April 23, 2007, between Fortis Bank NV/SA Limited and Randgold Resources Limited.

We entered into this agreement to cover our derivative transactions.

4. International Swap Dealers Association Inc. Novation Agreement, dated April 23, 2007, between Randgold Resources Limited, Société Générale and Fortis Bank NV/SA.

Under this agreement Société Générale transferred by novation to Fortis Bank NV/SA all of its rights, liabilities, duties and obligations under and in respect of each transaction entered into with Randgold Resources Limited that is listed on the Annex to this agreement.

5. Revolving Credit Facility Agreement, dated May 1, 2007, among Randgold Resources (Somilo) Limited, Randgold Resources Limited, various Banks and Other Financial Institutions and NM Rothschild & Sons Limited.

We entered into this Revolving Credit Facility Agreement to obtain a loan facility in the amount of \$60,000,000.

6. Charge Over Shares, dated May 8, 2007, between Randgold Resources Limited and NM Rothschild & Sons Limited.

We entered into this agreement to create security over our shares from time to time in Mining Investments (Jersey) Limited and Randgold Resources (Somilo) Limited in favor of NM Rothschild & Sons Limited acting on behalf of all the finance parties with respect to the \$60,000,000 Revolving Credit Facility Agreement.

7. Charge Over Shares, dated May 8, 2007, between Mining Investments (Jersey) Limited and NM Rothschild & Sons Limited.

We entered into this agreement to create security over our shares from time to time in Morila Limited in favor of NM Rothschild & Sons Limited acting on behalf of all the finance parties with respect to the \$60,000,000 Revolving Credit Facility Agreement.

8. Deed of Guarantee and Indemnity, dated May 8, 2007, between Randgold Resources Limited and NM Rothschild & Sons Limited.

We entered into this agreement to provide security in the payment and discharge of the obligations of, among others, Randgold Resources (Somilo) Limited under the \$60,000,000 Revolving Credit Facility Agreement and related finance documents.

9. Deed of Guarantee and Indemnity, dated May 8, 2007, between Société des Mines de Loulo S.A. and NM Rothschild & Sons Limited.

We entered into this agreement to provide security for the payment and discharge of the obligations of, among others, Randgold Resources (Somilo) Limited under the \$60,000,000 Revolving Credit Facility Agreement and related finance documents.

83

Table of Contents

10. Deed of Assignment, dated May 8, 2007, between Randgold Resources Limited and NM Rothschild & Sons Limited.

We entered into this agreement to assign the Risk Management Agreements to NM Rothschild & Sons Limited acting on behalf of all the finance parties with respect to the \$60,000,000 Revolving Credit Facility Agreement.

11. Registered Share Pledge Agreement, dated May 9, 2007, between Randgold Resources (Somilo) Limited and NM Rothschild & Sons Limited.

We entered into this agreement to pledge our class C shares held in Société des Mines de Loulo SA from time to time for the benefit of NM Rothschild & Sons Limited acting on behalf of the lenders with respect to the \$60,000,000 Revolving Credit Facility Agreement.

D. EXCHANGE CONTROLS

There are currently no Jersey or United Kingdom foreign exchange control restrictions on the payment of dividends on our ordinary shares or on the conduct of our operations. Jersey is in a monetary union with the United Kingdom. There are currently no limitations under Jersey law or our Articles of Association prohibiting persons who are not residents or nationals of United Kingdom from freely holding, voting or transferring our ordinary shares in the same manner as United Kingdom residents or nationals.

E. TAXATION

Material Jersey Tax Consequences

General

The following summary of the anticipated tax treatment in Jersey in relation to the payments on the ordinary shares and ADSs is based on the taxation law and practice in force at the date of this Annual Report, and does not constitute legal or tax advice and prospective investors should be aware that the relevant fiscal rules and practice and their interpretation may change. We encourage you to consult your own professional advisers on the implications of subscribing or, buying, holding, selling, redeeming or disposing of ordinary shares or ADSs and the receipt of interest

and distributions, whether or not on a winding-up, with respect to the ordinary shares or ADSs under the laws of the jurisdictions in which they may be taxed.

We are an “exempt company” within the meaning of Article 123A of the Income Tax (Jersey) Law, 1961, as amended, for the calendar year ending December 31, 2005. We are required to pay an annual exempt company charge, which is currently (pounds sterling) 600, in respect of each subsequent calendar year during which we wish to continue to have “exempt company” status. The retention of “exempt company” status is conditional upon the Controller of Income Tax being satisfied that no Jersey resident has a beneficial interest in us, except as permitted by published concessions granted by the Controller from time to time. By concession, the holding of ordinary shares or ADSs by a Jersey resident in an exempt company, the shares of which are traded on a recognized stock exchange, is not regarded as a beneficial interest, provided that the holding is de minimis or clearance has been obtained from the Controller.

The Controller of Income Tax has indicated that a holding by Jersey residents of less than 10% of the share capital of a company shall be treated as de minimis.

As an “exempt company”, we will not be liable for Jersey income tax other than on Jersey source income, except by concession bank deposit interest on Jersey bank accounts. For so long as we are an “exempt company”, payments in respect of the ordinary shares and ADSs will not be subject to any taxation in Jersey, unless the shareholder is resident in Jersey, and no withholding in respect of taxation will be required on those payments to any holder of the ordinary shares or ADSs.

Currently, there is no double tax treaty or similar convention between the US and Jersey.

84

Table of Contents

Taxation of Dividends

Dividends are declared and paid gross in US dollars. Under existing Jersey law, provided that the ordinary shares and ADSs are not held by, or for the account of, persons resident in Jersey for income tax purposes, payments in respect of the ordinary shares and ADSs, whether by dividend or other distribution, will not be subject to any taxation in Jersey and no withholding in respect of taxation will be required on those payments to any holder of our ordinary shares or ADSs.

Taxation of Capital Gains and Estate and Gift Tax

Under current Jersey law, there are no death or estate duties, capital gains, gift, wealth, inheritance or capital transfer taxes. No stamp duty is levied in Jersey on the issue or transfer of ordinary shares or ADSs. In the event of the death of an individual sole shareholder, duty at rates of up to 0.75% of the value of the ordinary shares or ADSs held may be payable on the registration of Jersey probate or letters of administration which may be required in order to transfer or otherwise deal with ordinary shares or ADSs held by the deceased individual sole shareholder.

Material United States Federal Income Tax Consequences

The following summary describes the material US Federal income tax consequences to US holders (as defined below) arising from the purchase, ownership and disposition of our ordinary shares or ADSs. This summary is based on the provisions of the Internal Revenue Code of 1986, as amended, which we refer to as the Code, final, temporary and

proposed US Treasury Regulations promulgated under the Code, and administrative and judicial interpretations of the Code and the US Treasury Regulations, all as in effect as of the date of this summary, and all of which are subject to change, possibly with retroactive effect.

This summary has no binding effect or official status of any kind; we cannot assure holders that the conclusions reached below would be sustained by a court if challenged by the Internal Revenue Service.

For purposes of this discussion, a “US holder” is a holder of our ordinary shares or ADSs that is:

- a US citizen;
- an individual resident in the United States for US Federal income tax purposes;
- a domestic corporation, or other entity taxable as a corporation, organized under the laws of the United States or of any US state or the District of Columbia;
- an estate the income of which is includible in its gross income for US Federal income tax purposes without regard to its source; or
- a trust, if either: a US court is able to exercise primary supervision over the administration of the trust and one or more US persons have the authority to control all the substantial decisions of the trust, or the trust has a valid election in effect under applicable US Treasury regulations to be treated as a US person.

This summary does not deal with all aspects of US Federal income taxation that may be relevant to particular US holders in light of their particular circumstances, or to US holders subject to special rules, including, without limitation:

- some retirement plans;
- insurance companies;
- US holders of ordinary shares or ADSs held as part of a “straddle,” “synthetic security,” “hedge,” “conversion transaction” or other integrated investment;
- persons that enter into “constructive sales” involving our ordinary shares or ADSs or substantially identical property with other investments;
- US holders whose functional currency is not the US Dollar;

85

Table of Contents

- some expatriates or former long-term residents of the United States;
- financial institutions;
- broker-dealers;
- tax-exempt organizations;
- US holders who own, directly, indirectly or through attribution, 10% or more of our outstanding voting stock;
- Persons subject to the alternative minimum tax;
- Regulated investment companies;
- Traders in securities who elect to apply a mark-to-market method of accounting; and
- Person who acquired their shares or ADSs pursuant to the exercise of employee stock options or otherwise as compensation.

In addition, this summary does not address the effect of any applicable US state, local or non-US tax laws, does not consider the tax treatment of persons who own our ordinary shares or ADSs through a partnership or other

pass-through entity, and deals only with ordinary shares or ADSs held by US holders as “capital assets” as defined in Section 1221 of the Code. If a partnership (including for this purpose, any entity treated as a partnership for US Federal income tax purposes) holds shares or ADSs, the tax, treatment of a partner generally will depend upon the status of the partner and the activities of the partnership. If a US holder is a partner in a partnership that holds shares or ADSs, the holder is urged to consult its own tax advisor regarding the specific tax consequences of the ownership and disposition of the shares or ADSs.

We encourage US holders of our ordinary shares or ADSs to consult with their own tax advisors with respect to the US Federal, state and local tax consequences, as well as the tax consequences in other jurisdictions, of the purchase, ownership and disposition of our ordinary shares or ADSs applicable in their particular tax situations.

Ownership of Ordinary Shares or ADSs

For purposes of the Code, US holders of ADSs will be treated for US Federal income tax purposes as the owner of the ordinary shares represented by those ADSs. Exchanges of ordinary shares for ADSs and ADSs for ordinary shares generally will not be subject to US Federal income tax.

For US Federal income tax purposes, distributions with respect to our ordinary shares or ADSs, other than distributions in liquidation and distributions in redemption of stock that are treated as exchanges, will be taxed to US holders as ordinary dividend income to the extent that the distributions do not exceed our current and accumulated earnings and profits as determined for federal income tax purposes.

Distributions, if any, in excess of our current and accumulated earnings and profits will constitute a non-taxable return of capital and will be applied against and reduce the holder’s basis in our ordinary shares or ADSs. To the extent that these distributions exceed the US holder’s tax basis in our ordinary shares or ADSs, as applicable, the excess generally will be treated as capital gain, subject to the discussion below under the heading “Passive Foreign Investment Company Rules”.

Dividend income derived with respect to our ordinary shares or ADSs will constitute “portfolio income” for purposes of the limitation on the use of passive activity losses and, therefore, generally may not be offset by passive activity losses, and as “investment income” for purposes of the limitation on the deduction of investment interest expense. Such dividends will not be eligible for the dividends received deduction generally allowed to a US corporation under Section 243 of the Code.

Individual US holders are eligible for reduced rates of US Federal income tax (currently a maximum of 15%) in respect of “qualified dividend income” received in taxable years beginning after

86

Table of Contents

December 31, 2002 and beginning before January 1, 2011. For this purpose, qualified dividend income generally includes dividends paid by non-US corporations if, among other things, certain minimum holding periods are met and either (i) the ordinary shares (or ADSs) with respect to which the dividend has been paid are readily tradable on an established securities market in the United States, or (ii) the non-US corporation is eligible for the benefits of a comprehensive US income tax treaty which provides for the exchange of information. We currently believe that dividends paid with respect to our ordinary shares and ADSs will constitute qualified dividend income for US federal income tax purposes, provided the individual US holders of our shares and ADSs meet certain requirements.

However, if we are a passive foreign investment company, as discussed below under the heading “Passive Foreign Investment Company Rules”, in the taxable year of the distribution or the preceding tax year, the dividends paid with respect to our ADSs will not constitute qualified dividend income. US holders are urged to consult their own tax advisors regarding the classification of any distributions from us as qualified dividend income.

Sale or Other Disposition of Ordinary Shares or ADSs

If a US holder sells or otherwise disposes of its ordinary shares or ADSs in a taxable transaction, it will generally recognize gain or loss for US Federal income tax purposes in an amount equal to the difference between the amount realized on the sale or other taxable disposition and its tax basis in the ordinary shares or ADSs. Subject to the discussion below under “Passive Foreign Investment Company Rules,” that gain or loss generally will be capital gain or loss and will be long-term capital gain or loss if the US holder has held the ordinary shares or ADSs for more than one year at the time of the sale or other taxable disposition. In general, any gain that US holders recognize on the sale or other taxable disposition of ordinary shares or ADSs will be US source income for purposes of the foreign tax credit limitation and any losses recognized will generally be allocated against US source income. Deduction of capital losses is subject to limitations under the Code.

Passive Foreign Investment Company Rules

A special and adverse set of US Federal income tax rules apply to a US holder that holds stock in a passive foreign investment company, or PFIC. In general, we will be a PFIC if 75% or more of our gross income in a taxable year is passive income. Alternatively, we will be considered to be a PFIC if at least 50% of our assets in a taxable year, averaged over the year and determined based on fair market value, are held for the production of, or produce, passive income.

We believe that we currently are not a PFIC and do not expect to become a PFIC in the near future. There is significant uncertainty in the application of the PFIC rules to mining enterprises such as ourselves as a result of the interplay of several sets of tax rules. In addition, because the tests for determining PFIC status are applied as of the end of each taxable year and are dependent upon a number of factors, some of which are beyond our control, including the value of our assets, based on the market price of our ordinary shares, and the amount and type of our gross income, we cannot assure you that we will not become a PFIC in the future or that the US Internal Revenue Service will agree with our conclusion regarding our current PFIC status.

If we are a PFIC for US Federal income tax purposes for any year during a US holder’s holding period of our ADSs or ordinary shares and the US holder does not make a QEF Election or a “mark-to-market” election, both as described below:

- any gain recognized by a US holder upon the sale of ADSs or ordinary shares, or the receipt of some types of distributions, would be treated as ordinary income;
- this income generally would be allocated ratably over a US holder’s holding period with respect to our ADSs or ordinary shares; and
- the amount allocated to prior years, with certain exceptions, will be subject to tax at the highest tax rate in effect for those years and an interest charge would be imposed on the amount of deferred tax on the income allocated to the prior taxable years.

Although we generally will be treated as a PFIC as to any US holder if we are a PFIC for any year during a US holder’s holding period, if we cease to satisfy the requirements for PFIC

Table of Contents

classification, the US holder may avoid PFIC classification for subsequent years if he, she or it elects to recognize gain based on the unrealized appreciation in the ADSs or ordinary shares through the close of the tax year in which we cease to be a PFIC. Additionally, if we are a PFIC, a US holder who acquires ADSs or ordinary shares from a decedent would be denied the normally available step-up in tax basis for our ADSs or ordinary shares to fair market value at the date of death and instead would have a tax basis equal to the lower of the fair market value or the decedent's tax basis.

A US holder who beneficially owns stock in a PFIC must file Form 8621 (Return by a Shareholder of a Passive Foreign Investment Company or Qualified Electing Fund) with the Internal Revenue Service for each tax year such US holder holds stock in a PFIC. This form describes any distributions received with respect to such stock and any gain realized upon the disposition of such stock.

For any tax year in which we are determined to be a PFIC, a US holder may make a QEF Election, which is an election to treat his, her or its ADSs or ordinary shares as an interest in a qualified electing fund. If a US holder makes a QEF Election, the US holder would be required to include in income currently his, her or its proportionate share of our earnings and profits in years in which we are a PFIC regardless of whether distributions of these earnings and profits are actually distributed to that US holder and be required to comply with specified information reporting requirements. Any gain subsequently recognized upon the sale by that US holder of his, her or its ADSs or ordinary shares generally would be taxed as capital gain and the denial of the basis step-up at death described above would not apply.

As an alternative to a QEF Election, a US holder generally may be able to avoid the imposition of the special tax and interest charge described above by electing to mark his, her or its ADSs or ordinary shares to market annually, and, therefore, recognize for each taxable year, subject to certain limitations, ordinary income or loss equal to the difference, as of the close of taxable year, between the fair market value of his, her or its ADSs or ordinary shares and the adjusted tax basis of his or its ADSs or ordinary shares. Losses would be allowed only to the extent of the net mark-to-market gain previously included by the US holder under the election in prior taxable years. If a mark-to-market election with respect to ADSs or ordinary shares is in effect on the date of a US holder's death, the tax basis of the ADSs or ordinary shares in the hands of a US holder who acquired them from a decedent will be the lesser of the decedent's tax basis or the fair market value of the ADSs or ordinary shares.

Rules relating to a PFIC are very complex. US holders are encouraged to consult their own tax advisors regarding the application of PFIC rules to their investments in our ADSs or our ordinary shares.

Backup Withholding and Information Reporting

Payments to US holders in respect of our ordinary shares or ADSs may be subject to information reporting to the US Internal Revenue Service and to backup withholding tax, currently imposed at a rate of 28%.

However, backup withholding and information reporting will not apply to a US holder that is a corporation or comes within an exempt category, and demonstrates the fact when so required, or furnishes a correct taxpayer identification number and makes any other required certification.

Backup withholding is not an additional tax. Amounts withheld under the backup withholding rules will be allowed as a refund or credit against a US holder's US Federal income tax liability, provided that the required procedures are followed.

United Kingdom Tax Considerations

Dividends

A person having an interest in ADSs or ordinary shares who is not a resident in the U.K. will not be subject to tax in the UK on dividends paid on our ordinary shares, unless that person carries on business in the UK through a branch or agency, to which the ordinary shares or ADSs in question are attributable.

88

Table of Contents

A person having an interest in ADSs or ordinary shares who is resident in the UK will, in general, be subject to U.K. income tax or corporation tax on dividends paid by us. No such liability will arise for individual persons having an interest in ADSs or ordinary shares who, though U.K. resident, are not domiciled in the U.K., or for Commonwealth citizens or citizens of the Republic of Ireland who are not ordinarily resident in the U.K., except to the extent that amounts are remitted or deemed to be remitted to the U.K.

No credit will be available against the U.K. tax liability of a person having an interest in ADSs or ordinary shares on dividends received from us for underlying taxes suffered or paid by us on our own income, except in the case of a company owning directly or indirectly not less than 10% of our voting power. As we are a Jersey exempt company, no withholding taxes will be payable on dividends.

Capital Gains

A person having an interest in ADSs or ordinary shares who is neither resident nor ordinarily resident in the U.K. will generally not be subject to tax in the UK on capital gains on a disposal of our ordinary shares or interests in the ADSs.

However, individuals who left the U.K. after March 17, 1998 and who were resident in the U.K. for four out of seven years prior to departure, and who return to the U.K. within five years of departure will be subject to U.K. capital gains tax on any gains realized during the period of absence.

Persons having an interest in ADSs or ordinary shares who are resident and/or ordinarily resident in the U.K. or who hold their ordinary shares or interests in ADSs through a U.K. trading branch or agency will, in general, be subject to U.K. taxation on capital gains on a disposal of ordinary shares or interests in ADSs. However, persons having an interest in ADSs or ordinary shares who are individuals and who are resident and/or ordinarily resident in the U.K. but who are not domiciled in the U.K. will not be subject to U.K. taxation on capital gains arising on a disposal of ordinary shares or interest in ADSs unless they remit to the U.K., or are deemed to have remitted to the U.K., the proceeds of the disposal.

Inheritance Tax

Liability to U.K. inheritance tax may arise on the death of a person having an interest in ADSs or ordinary shares, or on a gift (or disposal at an undervalue) of ordinary shares or ADSs by a person, who is domiciled, or deemed to be domiciled, in the U.K.

Where ordinary shares or interests in ADSs are held by a person who is neither domiciled nor deemed to be domiciled in the U.K., no liability to U.K. inheritance tax will arise in respect of them.

Stamp Duty and Stamp Duty Reserve Tax

No U.K. stamp duty should be payable on any transfer of an ADS, provided it is executed and retained outside the U.K. Therefore, a transfer of an ADS in the United States between non-residents of the U.K. would not ordinarily give rise to a U.K. stamp duty charge.

An instrument transferring an ADS could attract U.K. stamp duty if it relates to anything done or to be done in the U.K.; for example, if it is executed in the U.K. or to be brought into the U.K. after execution. If the transfer is on a sale then the rate of stamp duty will be 0.5% of the consideration given. This charge is rounded up to the nearest (pounds sterling) 5. Gifts and other transfers which are neither sale nor made in contemplation of a sale do not attract this charge. Instead they will either be exempt or attract a fixed duty of (pounds sterling) 5 per transfer.

A transfer from The Bank of New York to an ADS holder of the underlying ordinary shares may be subject to a fixed stamp duty of (pounds sterling) 5 if the instrument of transfer relates to anything done or to be done in the U.K.; for example, if it is executed in the U.K. or is to be brought into the U.K. after execution. A transfer of ordinary shares from The Bank of New York directly to a purchaser on behalf of an ADS holder may attract stamp duty at a rate of 0.5% of the consideration, rounded up to the nearest (pounds sterling) 5 U.K. stamp duty reserve tax will not be payable on an agreement to transfer ADSs.

Item 11. Quantitative and Qualitative Disclosures About Market Risk

Hedge Policy

Although, in general, it is not our policy to hedge our gold sales, we believe it is prudent to hedge during times of significant capital expansion and we are sometimes required to do so under debt financing arrangements. The market price of gold has a significant effect on our results of operations, our ability to pay dividends and undertake capital expenditures, and the market price of our ordinary shares. Gold prices have historically fluctuated widely and are affected by numerous industry factors over which we have no control. The aggregate effect of these factors is impossible for us to predict.

We use hedging instruments to protect the selling price of some of our anticipated gold production. These hedging instruments have been required by the terms of our Morila and Loulo loans.

Morila's hedging was administered by AngloGold Ashanti's treasury department, which acts upon recommendations of a joint hedging committee within the guidelines of a policy set agreed between the partners and approved by the finance department which acts upon the recommendations of a hedging committee within the guidelines of a policy set by our board.

The Morila hedge book was closed out in 2004.

The Loulo loan was entered into in 2004 with a consortium of financial lenders, namely, Rothschild, SG Corporate and Investment Bank, ABSA Bank and HVB Group, and had as a requirement that some hedging be put in place. The intended effect of the hedging transactions was to lock in a fixed sale price for some of our future gold production, and reduce the adverse impact of a future fall in gold prices.

Somilo's hedging is administered by our finance department which acts upon the recommendations of a hedging committee within the guidelines of a policy set by our board. The hedging was entered into in terms of a requirement of the Loulo Loan. The Loulo loan was with a consortium of financial lenders: Rothschild, SG Corporate and Investment Bank, ABSA Bank and HVB Group. The Loulo Loan has in early May 2007 been replaced by a Revolving Credit Facility.

90

Table of Contents

The consortium of financial lenders in the Revolving Credit Facility are Rothschild, SG Corporate and Investment Bank, Barclays Bank and Fortis Bank. The Revolving Credit Facility does not require any minimum hedging levels, but all hedging contracts are assigned to the consortium of financial lenders as part of the security package.

All of Somilo's derivative transactions previously had to be in compliance with the terms and conditions of the Loulo loan agreement. That agreement placed a limit on derivative transactions of 70% of Loulo's forecast production for a given year. In terms of the Revolving Credit Facility Agreement, derivative transactions in the group are limited to 75% of group production.

Our board agreed as part of the financing arrangements for the development of Loulo that some gold price protection be secured. At December 31, 2006, 298,075 ounces remained, sold forward at an average forward price of \$436 per ounce. At December 31, 2005, 365,000 ounces had been sold forward at an average price of \$433 per ounce.

These derivatives are accounted for in accordance with International Accounting Standard 39, "Financial Instruments: Recognition and Measurement". Under IAS 39, all these derivatives are recognized on the balance sheet at their fair value.

On the date a derivative contract is entered into, we designate the derivative for accounting purposes as either a hedge of the fair value of a recognized asset or liability or a firm commitment (fair value hedge) or a hedge of a forecasted transaction (cash flow hedge). The derivatives held as at December 31, 2006 were all being accounted for as cash flow hedges.

We formally document all relationships between hedging instruments and hedged items, as well as our risk management objective and strategy for undertaking various hedge transactions. This process includes linking derivatives designed as hedges to specific assets and liabilities or to specific firm commitments or forecasted transactions. We formally assess, both at the hedge inception and on an ongoing basis, whether the derivatives that are used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items.

Foreign Currency Sensitivity

In the normal course of business, we enter into transactions denominated in foreign currencies, primarily Euro and Communauté Financière Africaine francs. We do not currently hedge our exposure to foreign currency exchange rates. We recognized net foreign exchange losses of \$1 million and \$2.1 million respectively for the years ended December 31, 2006 and December 31, 2005. Exchange rate movements also affect the US dollar value of costs denominated in other currencies.

We had foreign currency denominated loans of Euro 3.9 million outstanding at 31 December 2006. Had the US dollar been 10% weaker against the Euro at that day, a \$0.5 million exchange loss would have resulted. We had foreign currency cash and cash equivalents of Euro 6.9 million and £0.6 million at 31 December 2006. A 10% negative movement of the value of the US dollar against these currencies would have resulted in a \$1 million exchange profit at this date.

At December 31, 2005 we had foreign currency denominated loans of Euro 5.8 million outstanding. A 10% reduction in the value of the US dollar against the Euro at that day would have resulted in a \$0.7 million exchange loss. We had foreign currency cash and cash equivalents of Euro 4.6 million and £0.6 million at 31 December 2005. A 10% negative movement of the value of the US dollar against these currencies at that date would have resulted in a \$0.6 million exchange profit.

Commodity Price Sensitivity

The market price of gold has a significant effect on our results of operations, our ability to pay dividends and undertake capital expenditures and the market prices of our ordinary shares.

Gold prices have historically fluctuated widely and are affected by numerous industry factors over which we have no control. The aggregate effect of these factors is not possible for us to predict.

91

Table of Contents

Details of the derivative financial instruments at December 31, 2006 are:

Hedging instruments

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Maturity Dates	Forward Sales of Gold	
	Ounces	\$/oz
Loulo (100%)		
December 31, 2007	132,583	438
December 31, 2008	80,498	431
December 31, 2009	84,994	437
	298,075	436

And at December 31, 2005:

Maturity Dates	Hedging instruments Forward Sales of Gold	
	Ounces	\$/oz
Loulo (100%)		
December 31, 2006	93,498	431
December 31, 2007	116,004	438
December 31, 2008	80,498	431
December 31, 2009	75,000	430
	365,000	433

The forward price of gold is sensitive to fluctuations in the gold spot price, interest rates and the gold lease rate. The following table sets forth a sensitivity analysis of the mark-to-market valuations of our hedges as at December 31, 2006:

Sensitivity to Change in Gold Price at December 31, 2006

Loulo (100%):								
Change in \$ gold price	\$20	\$10	\$5	\$2	(\$2)	(\$5)	(\$10)	(\$20)
Mark-to-market valuation* (\$ millions)	-72.3	-69.9	-68.7	-68.0	-67.0	-66.3	-65.1	-62.6

Sensitivity to Change in Weighted Average \$ Interest Rate at December 31, 2006

Loulo (100%):						
Change in rate	1%	0.5%	0.2%	(0.2%)	(0.5%)	(1%)
Mark-to-market valuation* (\$ millions)	-68.6	-68.0	-67.7	-67.3	-67.0	-66.4

Sensitivity to Change in Gold Lease Rate at December 31, 2006

Loulo (100%):					
Change in rate	1%	0.5%	0.2%	(0.2%)	(0.5%)
Mark-to-market valuation* (\$ millions)	-65.6	-66.5	-67.1	-67.9	-68.5

* The actual mark-to-market valuation at December 31, 2006 was negative \$67.5 million.

During 2004, 365,000 ounces were sold forward at an average forward price of \$432 per ounce. The Loulo price protection was initially done on a short dated spot deferred basis. With the completion of the final mining schedules and feasibility study, as well as credit approval of the project financing, the hedged ounces were rolled out and matched to future production. Prior to this, the Loulo instruments were deemed speculative for accounting purposes. We have used four counterparties for our current hedge book. These counterparties are international banks which have not failed to perform as required under our hedging arrangements.

Table of Contents

In July 2005 we rolled forward 12,500 ounces previously sold in equal quantities over the period July 2005 to December 2005 at a price of \$430 per ounce, into equal quantities over the period July 2007 to December 2007 at a price of \$462 per ounce.

During January 2006, 10,000 ounces previously sold in even amounts over the period January 2006 to June 2006 at \$430 per ounce were rolled forward into the period January 2009 to June 2009, with a new forward price of \$489 per ounce. In the same month, 6,667 ounces from the January 2006 forward sales, previously priced at \$430 per ounce, were rolled forward into May and June 2006 at a price of \$437 per ounce.

In February 2006, we moved 20,000 ounces previously sold forward over the period February 2006 to April 2006 at a price of \$430 per ounce, into the period June 2006 to December 2006 at a price of \$441 per ounce.

In August 2006, 5,999 ounces previously sold forward at \$425.91 were rolled out in equal quantities into January 2007 and April 2007 at prices of \$431.81 and \$434.06, respectively.

In December 2006, we moved 10,580 ounces previously sold forward at \$435.33 in equal quantities into February and March 2007 at new forward prices of \$437.90 and \$438.18, respectively.

During the first quarter of 2007, 10,752 ounces previously sold forward at \$444.81, were rolled out to the second and third quarters of 2007, 3,583 ounces at \$454.51 into the second quarter and 7,168 ounces at \$456.09 into the third quarter.

The Revolving Credit Facility replaced the Loulo Loan in May 2007. As the HVB Group, which previously participated in the Loulo Loan, is not a lender in the Revolving Credit Facility, the 40,248 ounces of the remaining 2007, 2008 and 2009 hedged ounces which pertained to the HVB Group were novated to other counterparties in May 2007. The 11,748 ounces at an average forward price of \$436.69 per ounce due for delivery in 2007, were novated and subsequently rolled forward to 2010 at \$472 per ounce. The new price is net of any novation charges. The 28,500 ounces at a previous average forward price of \$429.95 due for delivery in 2008 and 2009 were novated at \$418.58, the lower price being the result of novation charges pertaining to these ounces.

Also in May 2007, 30,000 ounces previously sold forward in 2007 at an average price of \$447.29 per ounce, were rolled into 2010 at a new average forward price of \$511.28 per ounce.

Details of the derivative financial instruments at May 31, 2007 are:

Maturity Dates	Hedging instruments	
	Forward Sales of Gold Ounces	\$/oz
Loulo (100%)		
December 31, 2007	43,923	438
December 31, 2008	80,496	429
December 31, 2009	84,996	435

December 31, 2010	41,748	500
	251,163	444

The accounting effects of our hedging activities are as follows:

The total fair value of the above financial instruments as at December 31, 2006 was a loss of \$67.5 million (December 31, 2005: loss of \$43.1 million).

During the year ended December 31, 2004, we sold 204,194 ounces of gold at an average price of \$382 per ounce. At the average spot gold price for the year of approximately \$409 per ounce, product sales would have amounted to approximately \$83.5 million for the year, an increase of approximately \$5.5 million in sales.

During the year ended December 31, 2005, we sold 322,915 ounces of gold at an average price of \$469 per ounce. At the average spot gold price for the year of approximately \$444 per ounce, product sales would have amounted to approximately \$143.4 million for the year, a decrease of approximately \$8.1 million in sales.

93

Table of Contents

During the year ended December 31, 2006, we sold 448,242 ounces of gold at an average price of \$576 per ounce. At the average spot gold price for the year of approximately \$604 per ounce, product sales would have amounted to approximately \$270.70 million for the year, an increase of approximately \$12.4 million in sales.

Interest Rate Sensitivity

We generally do not undertake any specific actions to cover our exposure to interest rate risk and at December 31, 2006 were not party to any interest rate risk management transactions.

At December 31, 2005 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$72.5 million. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate is estimated to be \$0.4 million.

At December 31, 2006 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$50.5 million. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate is estimated to be \$0.3 million.

As our net earnings exposure with respect of debt instruments was mostly to the one month LIBOR, the hypothetical loss was modeled by calculating the 10% adverse change in one month LIBOR multiplied by the fair value of the respective debt instrument.

Item 12. Description of Securities Other Than Equity Securities

Not applicable.

PART II

Item 13. Defaults, Dividend Arrearages and Delinquencies

There have been no material defaults in the payment of principal, interest, a sinking fund or purchase fund installment or any other material default with respect to any of our indebtedness.

Item 14. Material Modification to the Rights of Security Holders and Use of Proceeds

Effective on June 11, 2004, we undertook a subdivision of our ordinary shares, which increased our issued share capital from 29,273,685 to 58,547,370 ordinary shares. In connection with this “share split”, our ordinary shareholders of record on June 11, 2004 received two additional \$0.05 ordinary shares for every one \$0.10 ordinary share they held. Following the share split, each shareholder held the same percentage interest in us, however, the trading price of each share was adjusted to reflect the share split. ADS holders were affected the same way as shareholders and the ADS ratio remains one ADS to one ordinary share.

Item 15. Controls and Procedures

(a) Disclosure Controls and Procedures: Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, carried out an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures. Based on such evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of the end of the period covered by this report, our disclosure controls and procedures are effective to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act are recorded, processed, summarized and reported within the required time periods.

(b) Management’s Report on Internal Control over Financial Reporting:

Our management is responsible for establishing and maintaining adequate internal control over financial reporting. The Securities Exchange Act of 1934 defines internal control over financial

94

Table of Contents

reporting in Rule 13a-15(f) and 15d-15(f) as a process designed by, or under the supervision of, the company’s principal executive and principal financial officers and effected by the company’s board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company’s assets that could have a material effect on the consolidated financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Our management assessed the effectiveness of our internal control over financial reporting as of December 31, 2006. In making this assessment, our management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control-Integrated Framework.

Based upon its assessment, our management concluded that, as of December 31, 2006, our internal control over financial reporting is effective based upon those criteria.

PricewaterhouseCoopers LLP, an independent registered public accounting firm that audited the consolidated financial statements included in this annual report on Form 20-F, has issued an attestation report on management's assessment of the effectiveness of our internal control over financial reporting as of December 31, 2006.

(c) See report of PricewaterhouseCoopers LLP, an Independent Registered Public Accounting Firm included under "Item 18 — Financial Statements", on page F-1.

(d) Changes in Internal Control Over Financial Reporting: There were no changes in our internal control over financial reporting that occurred during the year ended December 31, 2006 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 16. Reserved

Item 16A. Audit Committee Financial Expert

Our board has determined that Bernard Asher is an "audit committee financial expert" as defined in Item 16A of Form 20-F. Mr. Asher and each of the other members of the audit committee (being Dr. Voltaire and Dr. Paverd) are independent directors.

Item 16B. Code of Ethics

Our board has adopted a code of ethics that applies to the Chief Executive Officer, Financial Director and all financial officers. This code of ethics is posted on our website, www.randgoldresources.com.

Item 16C. Principal Accountant Fees and Services

PricewaterhouseCoopers has served as our independent registered public accounting firm for each of the financial years in the three-year period ended December 31, 2006, for which audited financial statements appear in this Annual Report on Form 20-F.

95

Table of Contents

The following table presents the aggregate fees for professional services and other services rendered by our Independent Registered Public Accounting Firm to us in 2006 and 2005.

	2006	2005
	\$	\$
	(in millions)	
Audit Fees ⁽¹⁾	0.7	0.4
Audit-related Fees ⁽²⁾	—	0.7
Tax Fees	—	—
All Other Fees	—	—
Total	\$ 0.7	\$ 1.1

(1) The Audit Fees consist of fees billed for the annual audit services engagement and other audit services, which are those services that only the external auditor reasonably can provide, and include our audit and statutory audits.

(2) Audit-related fees include fees billed relating to comfort letters and consents; attest services; and assistance with and review of documents filed with the Securities and Exchange Commission.

Audit Committee Pre-Approval Policies and Procedures

Below is a summary of the Audit committees pre-approved policies and procedures:

The Audit Committee comprises only independent non-executive directors and its mandate covers the sphere of duties relating to accounting policies, internal control, financial reporting practices, identification of exposure to significant risks and all corporate governance issues.

The Audit Committee is responsible for the appointment, removal and oversight of the activities of the external auditors. In addition the Audit Committee sets the principles for recommending the use of external auditors for non-audit services. The Audit Committee approves all external consulting services and other charges levied by the external auditors.

The Audit Committee met 6 times during 2006. At some of these meetings the committee met with the external audit partner and the finance director, to review the audit plans of the external auditors, to ascertain the extent to which the scope of the audit can be relied upon to detect weaknesses in internal controls and to review the quarterly and half-yearly financial results, the preliminary announcement of the annual results and the annual financial statements, as well as all statutory submissions of a financial nature, prior to approval by the board.

During 2006, all Audit-related Fees provided to us by PricewaterhouseCoopers were approved by the Audit Committee pursuant to the de minimis exception to the pre-approval requirement provided by paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

No work was performed by persons other than PricewaterhouseCoopers' full-time, permanent employees on the PricewaterhouseCoopers' engagement to audit our financial statements for 2006.

During 2006, the audit committee has overseen work undertaken to ensure compliance with the requirements of Section 404 of the Sarbanes Oxley Act.

Item 16D. Exemptions from the Listing Standards for Audit Committees

Not Applicable.

Item 16E. Purchaser of Equity Securities by the Issuer and Affiliated Purchasers

Neither the issuer nor any affiliate of the issuer purchased any of our shares during 2006.
