Form 6-K

On October 26, 2004, the Corporation issued a press release about new data presented at the Canadian Cardiovascular Congress on October 25, 2004. The new data showed that the accumulation of sterol in the skin tissues, as measured by the PREVU* Point of Care Sterol Test, provides *new* information about a patient's risk of coronary artery disease (CAD). Additionally, skin sterol, specifically skin tissue cholesterol, measured non-invasively, may have value in stratifying patients with established CAD who have been treated with cholesterol-lowering medications. The information contained in the press release is incorporated herein by reference and filed as Exhibit 99.1.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this Report to be signed on its behalf by the undersigned, thereunto duly authorized.
