- * Non-income producing security.
- § Security or portion thereof is out on loan.
- §§ Represents security purchased with cash collateral received for securities on loan.

Portfolio valuation: Fixed-income securities (other than short-term obligations, but including listed issues) are valued based on prices obtained by one or more independent pricing services approved by the Board of Trustees. Pricing services use a matrix, formula or other objective method that takes into consideration market indices, yield curves and other specific adjustments. Securities (other than fixed-income securities) for which the principal market is one or more securities exchanges are valued at market value, which is generally determined using the closing price on the exchange or market on which the security is primarily traded. If a securities exchange is not the principal market for a security, such security will, if market quotations are readily available, be valued at the closing bid price in the over-the-counter market (or the last sale price in the case of securities reported on the NASDAQ national market system for which any sales occurred during the day). Securities and other assets for which market quotations are not readily available are valued at fair value as determined in good faith by, or under the direction of, the Board of Trustees under procedures established by the Board of Trustees. Debt obligations that will mature in 60 days or less are valued on the basis of amortized cost, which approximates market value, unless it is determined that using this method would not reflect an investment's fair value.

Federal Income Tax Cost - At July 31, 2005, the identified cost for federal income tax purposes, as well as the gross unrealized appreciation from investments for those securities having an excess of value over cost, gross unrealized depreciation from investments for those securities having an excess of cost over value and the net unrealized depreciation from investments were \$418,540,172, \$16,001,281, \$(16,634,675) and \$(633,394), respectively.
